bosco@yab.com wrote:
: Why is the Pool CD mostly in ATR format?!? I thought it would be "BBS

Well, honestly, with the docs to ATR, and the source code to a DCM->ATR converter available, adding ATR support to an Atari wouldn't be all that hard.

The hard part would be getting the ATR files themselves on a disk (that's why DCM is compressed!)

But again, if you have a HD on the Atari, it should be no problem.

Also, if you're upset about the CD being in ATR format, unless you wanted to have the CD online as part of the BBS (ie, not copying everything onto your HD), then just borrow someone's PC (if you don't have one) and use "S2PC" or "AtarIMG" or "ATR2Unix".

Ahh.. but what about boot disks with no real DOS / file structure on them? I guess those'll need an ATR->DCM converter. Perhaps a little more difficult (but again, not impossible.. the source to DCM->ATR is available!)

Anyone up to taking this on? (Esp. as 8-bit software, not PC/Unix software)

Hello! I know you're dad. Talk to him a bit via e-mail, news & BAAUG BBS.

: world but i still LIKE IT! Also I work for a wholesale distributor so if
: anyone ever needs like memory or a cpu or a genuine intel motherboard just
: tell me and I'll get it for for no problem. So tell me whats new and

Cool. :) Alright everyone! Keep him to his word!! <russsssshh!!>

: exciting in the atari world?? I heard there was supposed to be a 16 bit
: atari called the mars board that never came out, a program called xformer

Nope. It's the "Sweet16" CPU, with a 65816 CPU (like Super NES and Apple IIGS)
and it is out. I have one (thanks, Mike!). Almost nothing supports it yet,
thoguh.

: for emulating a atari on a ibm, and sio to pc. Thats what I know is new

Yep. PC Xformer (up to version 3.3 (demo and commercial ; numbers are the same
now). Soon v.4 will be out, I guess, for Windows 95 (only)).

And Rainbow (for Mac) by someone else.

And Atari800 (for Unix, X-Window, Amiga) by yet another person.

You mentioned SIO2PC. Your dad's kind of a guru with that puppy. :) (The one
he made for me has a LED in it.. very useful, actually, now that my computers
are networked. When my Master machine (not hooked to a monitor) isn't booting
right, I can see right away w/o looking at the PC's screen).

: so far, anything I left out???

Umm.. my cool "FileSelector" program. :) Hehe.. umm, MIO II (not out yet)
which is an IDE hard drive interface. Super Pac Man (and a handful of other
previously-unreleased games) are being sold now. Another IDE hard drive
interface is out (by KMK, they did a huge post on it lately).

So, welcome to c.s.a.8!

: idea.
<snip>

Ooops - but APE has a problem which SIO2PC doesn't have. APE gives you "PC Mirror" mode. This gives you access to your MSDOS filesystem as though it were an Atari disk. Thing is, MSDOS has (I believe) a 512 file limit for directories, whereas MyDOS has a 64 file limit (and Sparta 128 files).

SIO2PC, on the other hand lets you (forces you to) insert PC files one at a time as disks.

Yes, APE is much better - nicer interface; get all the files you may need at once (without copying them to a RAMdisk or something first), but does it (yet) support some way of limiting the number of files to 64?

Or does it do something wierd that MyDOS just happens to accept? (Make the virtual directory sectors longer or repeated)

One problem I've found with APE though, with PC Mirror (as if this has ANYTHING to do with what we were talking about :)) is if two machines are reading a file from different points (ie, with a MUX system), the pointer doesn't get moved around.

So Steve, any way to get APE to tell how far in the file you've gone (adding better random access) to PC Mirror mode?? O<:^)

: Gee - I hate to burst your bubble, but as far as I know there is no way the
: Atari can *read* a CD-ROM - you *need* a PC.

CD's are SCSI. CD's are IDE. CD's would need, at most, a well done hack
to get working with Atari 8-bits. We have 512-byte-block IDE drives (see KMK's
post). We could always write some strange copy program to do
(MSDOS) CD -> Atari file transfer. (A la the old "Apple File Exchange" on
Macs).

: APE is inexpensive, and a SIO2PC cable is ridiculously easy to make.

:) SIO2PC is free. :) (Not as cool, but free)

: What is the problem?

Too many people getting upset about hardware / file compatibility problems,
and too few people working on software / hardware to fix it! :)

In Mydos 4.53/3 the file lengths are displayed as 3 digits instead of 4,
for menu programs and others which read the directory and show it on
screen. I don't know if there was any change to the sector numbers used
by NOTE and POINT.

Yes, but for a work around I just keep a directory under my \ATARI\
directory. Worst case is I shell out & move the files I need to the
directory with just the files I need for that session. Not perfect, but
it is OK.
.Yes, APE is much better - nicer interface; get all the files you may need
Well, I like the 3x speed I/O, write to mirror, & as you said, the interface
for file selection/direcotry is much better. Besides, Steve made me a
one off version that uses the DSR line instead of the RI. He's trying to
talk me into upgrading to 107, but I'm so happy with the DSR version, I'm
not interested<grin>!

This is a problem? ;) <grin>

> Thing is, MSDOS has (I believe) a 512 file limit
> for directories, whereas MyDOS has a 64 file limit (and Sparta 128 files).

Not my fault! :) I cant do anything about that. If someone was nice enough
to send me some semi/complete documentation on the Spertados
FAT format, I could make the directories native Spartados easily.

Note: since I think sparta uses a bitmap scheme, random access might become
possible.

> SIO2PC, on the other hand lets you (forces you to) insert PC files one at
> a time as disks.

I detect a bias here :) Yes, Sio2PC does 'let' you limit your access to
a single file, with no capability to see, mount, or use any others without
going to the PC keyboard. Also is 'lets' you ignore those pesky
subdirectories, which APE forces you to look at ;) (and use)

> Yes, APE is much better - nicer interface; get all the files you may need
> at once (without copying them to a RAMdisk or something first), but does
> it (yet) support some way of limiting the number of files to 64?

What do you mean? Of course only the first 64 files are displayed, its
a limitation of the Atari/MyDos main directory structure. If you want
to limit what files are displayed, you can just enter a diffrent
file mask, like '*.TXT'. All subdirectories will still be displayed.

> Or does it do something wierd that MyDOS just happens to accept? (Make the
> virtual directory sectors longer or repeated)

I dont have the paper in front of me, but I think the Atari/MyDos directory
structure does not use a 'next directory sector' flag. If it does such

a thing might be possible.

> One problem I've found with APE though, with PC Mirror (as if this has

You cant do that, as it says in the documentation. Files on the PC mirror
are for sequential acess only, (copying, reading, executing, etc). When
you write files to the PC mirror same deal.

If you need random access to a file you need to copy it to a
random access media, like an .ATR image. Not too difficult seeing all
you have to do is use the mydos copy command ;)

> So Steve, any way to get APE to tell how far in the file you've gone (adding
> better random access) to PC Mirror mode?? O<:^)

There should be a numeric readout of the MSDOS file position on the
screen where the .ATR filename normally appears.

Steve

This was one of the last games I bought for my 800xl. I don't recall much
about it now, except that the graphics and music were pretty decent by
8-bit standards, the packaging was wierd/amusing, and that I never managed
to finish it. (I think it was in like 5 or so different sections which you
progressed through in order to win. I got stuck at either the 2nd or 3rd
area).

Welcome to:

THE UNOFFICIAL ATARI 8-BIT NEW USER, EMULATOR HELP FAQ

Revision 1.0a, December 15, 1995

By Bill Kendrick

------------------------------------------------------------------

For general help (hardware, magazines, etc.) please check the Official
Atari 8-bit FAQ file:
Atari 8-bit FAQ
(http://www.smartpages.com/faqs/atari-8-bit/faq/faq.html)
You can also ask the FAQ keeper, Michael Current, for a copy at:
mcurrent@carleton.edu

If you want the latest copy of this FAQ:
Unofficial Atari 8-bit New User and Emulator Help FAQ
(http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html)
You can also ask me, the FAQ keeper, Bill Kendrick, for a copy at:
kendrick@zippy.sonoma.edu
------------------------------------------------------------------

Recent Changes:

* Since v.1.0 (Nov.30, 1995): Added more information about APE.

Summary of Atari 8-bit's and emulated 8-bit Atari's:

* Real Ataris: Atari 8-bit computers were produced between 1979 and
1987. The major models released were the:
+ 400 - 8K-16K, 400/800 OS, CTIA or GTIA graphics (depends when
made)
+ 800 - 8K-16K-48K, 400/800 OS, CTIA or GTIA graphics (depends
when made)
+ 1200XL - 64K, 1200XL OS, GTIA graphics
+ 600XL - 16K, XL OS, GTIA graphics
+ 800XL - 64K, XL OS, GTIA graphics
+ 65XE - 64K, XL OS, GTIA graphics
+ 130XE - 128K, XL OS, GTIA graphics
+ XEGS (Game System) - 64K, XEGS OS, GTIA graphics (Had Missile
Command)
All of the XL's except the 1200XL had BASIC installed on ROM. BASIC
can be purchased on cartridge for the 400, 800 and 1200XL.
* Emulated Ataris:
+ On IBM PCs/compatibles:
```

o PC Xformer 2.x. Limited Public Domain demo.
o PC Xformer 3.0x. Powerful Commercial version.
+ On Apple Macintoshes:
o Rainbow. Limited Public Domain demo.
o Rainbow. Powerful Registered Shareware version.
+ On Atari STs, TTs, and Falcons:
o ST Xformer 2.x. Limited Public Domain (previously
commercial).
+ On UNIX and X Window: (including PC and Amiga)
o Atari 800 Powerful Public Domain version.

Capabilities of an Atari 8-bit:

GRAPHICS:
* The Atari has maximum resolution of 320 x 192 (standard,
non-overscanned screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2,
160 x 96 x 4, 160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4
graphics are also supported. 40 x 24 x 256-character (128 normal,
128 inverse, character set indirection available) text mode is
standard (2 colors).
* 40 x 24 x 128-multi-colored-character (4 colors per character
allowed, the other 128 characters have 4th changed into a color 5)
and 40 x 12 x 128-multi-colored-character screen modes are
available.
* GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16
hue-only, and 80 x 192 x 9 color screen modes.
* Normal (bordered), narrow (underscanned), and wide (overscanned)
screen modes are available.
* Screen modes can be mixed (by lines) down the screen using the
Display List (a program which is executed by the ANTIC graphics
chip every screen refresh (60 times per second on real NTSC
Ataris).
* Fine scrolling (both vertical and horizontal) can be enabled on
any line on the screen.
* All other screen attributes (color, player/missile horizontal
position, screen width, player/missile/playfield priority, etc.)
can be ajusted at any point down the screen via a "Display List
Interrupt."
* Four 8-bit wide, 128 or 256 byte high single color players, and
four 2-bit wide, 128 or 256 byte high single color missiles are
available. A mode to combine the 4 missiles into a 5th 8-bit wide
player is also available, as is a mode to XOR colors or blacken
out colors when players overlap (good for making three colors out
of two players!) Players and missiles have adjustable priority and
collision detection (which is not supported by the PC Xformer 2.0
and 2.5 and ST Xformer programs).

SOUND:
* Four voices of 8-bit pitch-resolution (3.5 octaves), 4-bit

volume-resolution, and 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.
* A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was rerouted through the normal audio output, and the keyclick can be disabled.
* Some hardware stereo upgrades (like "Gumby") exist which double the number of voices.

Objective of this file:

At the time of its release (mid 1994), much discussion went on in the comp.sys.atari.8bit Usenet newsgroup about the Atari 8bit emulator for IBM / MSDOS based computers, PC Xformer 2.0 (XF2 for short). Many people in the 8-bit community had gotten fed up with the XF2-based questions which did not pertain to them, or to the very simple questions which came up time and again which bothered regular readers / digest subscribers.

This file was created to reduce the number of 'newbie' and XF2 questions. Now it's becoming a fairly good reference (and got me the job of writing the commerical 3.0 release's documents!).

This FAQ will present answers to simple questions like "how do I turn off BASIC" (a good answer to that of course is, READ THE FRIGGIN' MANUAL) and "how do I get a disk directory?"

It will also direct people who are unaware of the large amount of Atari 8-bit support (NOT NECESSARILY EMULATOR SUPPORT) and perhaps become a supplement to the many official and unofficial files floating around the net (like the official FAQ, the Vendor/Developer List, the Who's Who list, etc.).

-- QUESTIONS AND ANSWERS: --

1. What does "READY" mean?

This is the Atari BASIC prompt. See below for hints on Atari BASIC.
2. Why doesn't this program load?

The program may not work under the Atari 800 Operating System, it may require the XL/XE Operating System. Be sure you're in 800XL or 130XE mode. (Note: Not all (versions) of emulators support XL/XE modes!)

It may not work under the XL/XE Operating System (rare cases), switch to 800 mode.

Be sure you turned BASIC off before trying to load it if it cannot run with BASIC on.

It might be a BASIC program! Be sure you're in BASIC and use the BASIC "RUN" or "LOAD" (and then "RUN") command. Also, be sure it works with the BASIC you have. Some programs only run in BASIC XL or XE (which are both cartridge-based BASIC's not easily available to an emulator), and some run with TurboBASIC XL (disk-based).

It may just refuse to run on the emulator.
3. How do I turn off BASIC?

To toggle BASIC on and off in PC Xformer, press [SHIFT]-[F10].

To toggle BASIC on and off in Rainbow, ???.

To toggle BASIC on and off in Atari800, ???.

To toggle BASIC on and off in ST Xformer, ???.
4. Why doesn't this game/program run correctly?

It may use player/missle collision detection which is not supported on some versions of emulators.

See "Why doesn't this program load?", above.
5. How do I exit the emulator?

To exit PC Xformer, press [F5]. Note: this does NOT temporarily 'shell' or 'jump' to MSDOS.

To exit Rainbow, press [Apple]-[Q] or select "Exit" from the "Apple Menu".

To exit Atari 800, ??? or close the window.

To exit ST Xformer, ???.
6. How do I get to Atari DOS?

In BASIC, type "DOS" at the "READY" prompt.

Reboot without BASIC on.

Be sure you have a DOS-bootable disk image installed in drive 1 ("D1:").
7. How do I use files which are not in disk images with an emulator?

To "install" files as though there were plain disks with PC Xformer, simply add the files to the command line and use them as their respective drives (be sure the first drive is a DOS-bootable disk image).
Example: XFORMER MYDOS45.ATR filename.ext

To use a file from your Mac in Rainbow, make sure the disk image in drive 1 has enough space for the file, and select ???. The fill will be added to that disk image.

To use Unix files in Atari800, use the H drive. ???.

Use the MSDOS program S2PC which allows you to access files within a MyDOS/compatible .ATR disk image. S2PC let's you read, write, delete, change directory, and view the directory of a MyDOS/compatible .ATR disk image. It can be used via command-line parameters from MSDOS, or as a menu.

Use the MSDOS program ATARIMG, which is much like S2PC but has a nicer, more graphical (less-menu driven) interface. (Unfortunately, this doesn't run on all IBM's!)

Use the Mac program Virtual Disk Editor ???.
8. Just what ARE .ATR and .XFD files?

Refer to the XFormer and SIO2PC manuals for details on these files.

Simply put, they are Atari disks, stored as files which are as big as the disk they represent (an 88k disk image will use 88k on the IBM). .ATR files are used by SIO2PC and APE (see below) as well as most Atari emulators. .XFD files are used by ST Xformer and PC Xformer.
9. What are SIO2PC and APE?

Refer to the SIO2PC manuals for details on this program.

Refer to the APE manual and SIO2PC hardware manual for details on this program.

These are a programs which run on IBM/compatibles under MSDOS. (APE also runs fine under "dosemu" for IBM/compatibles running Linux). With the use of of a simple (and relatively inexpensive) cable, the software makes the IBM act as though it were a number of Atari peripherals. SIO2PC emulates up to four disk drives (any drive ID numbers from 1 to 8 are allowed) and a printer. APE emulators up to eight disk drives, a printer, and a modem (RS232). They use disk image files (.ATR's) and can also let the Atari access plain IBM files. SIO2PC does this much like PC XFormer does, making the single file its own disk. APE allows you to navigate your PC's drives through an Atari drive. The printer emulation of these programs redirect Atari "P:" writes to the PC's printer. SIO2PC can also direct the output to the screen or to a plain IBM file. Different text translations/conversions are available. (APE also allows keyboard macros, command key redefinition, the ability to save the current drive/etc. configuration and load it later as a "block", and the ability to both emulate copy protected disks (with it's own extension of the ".ATR" format, the ".PRO" format (which will hopefully be used in future versions of Atari emulators)) and create disk images from copy protected disks (with a special cable). SIO2PC may soon have this ability as well, since the documentations say it has been planned for a while.)

-- Getting around on the Atari: DOS and OS --

Note: This section will simply discuss Atari BASIC, the Atari OS, and Atari DOS 2.5 and MyDOS 4.5x (because these topics seem the most relevant to the less-knowledged/experienced Atari 8-bit users). No emulator-specific information will be presented.
* AtariDOS and MyDOS QuickReference: MyDOS (4.50 and 4.53) presents the user with the following commands:
+ [*] Disk directory of current directory (like "dir *.*" in MSDOS)
+ [1]-[9] Disk directory of a disk drive (like "dir a:*.*" to "dir i:*.*")
+ [A] Disk directory (like "dir " and optional output destination)
+ [B] Quit to cartridge
+ [C] Copy file(s) ("[source],[destination]" copies from one place or disk to another, just "[source]" copies from one place on one disk in a drive to the same place on another disk in the same drive (asks for swapping))
+ [D] Delete file(s) (add "/N" to delete without being prompted first) (add ">*.*" or ":*.*" after a subdirectory name to delete the files within it. A subdirectory name alone will delete the subdirectory (if it is empty and unlocked)). (Acts like both "del" and "rd" in MSDOS.)
+ [E] Rename file(s) (renaming multiple files is allowed, but be careful). (like "ren [old] [new]" in MSDOS - with MyDOS, use "," between old and new masks.)
+ [F] Locks file(s) from overwrite, deletion and appending (like "attrib +r [mask]" in MSDOS.)
+ [G] Unlocks file(s) (returns them to their default state).
+ [H] Writes DOS files to a disk (this creates a disk which boots with the current version of MyDOS you are using and also has the menu file "DUP.SYS" on it as well). (This is like "sys"(?) in MSDOS.)
+ [I] Formats a disk (add "/N" after the drive number to do a quick-format of an already-formatted disk (ie, just a very fast "delete `*.*'").
+ [J] Duplicate disk (copies an entire disk, including boot sector, when using XFormer, it's much quicker to just copy one .XFD or .ATR to another).
+ [K] Make binary file: saves memory and makes it binary-loadable. See [L].
+ [L] Load binary file: loads a compiled program. (like "[filename]" in MSDOS, except any ".EXE", ".COM", ".OBJ", etc. is still required.)
+ [M] Run at address. Mainly for advanced users. Reboot is "E477", reset is "E474" (these are the hex values of the addresses where the routines to reboot and reset are.)
+ [N] MEM.SAV: when this is on, whenever you go to DOS (from BASIC, for example) it will write what is in memory to a file "MEM.SAV" so that when DUP.SYS (the menu) loads it isn't lost

forever. When you exit DUP.SYS with the "B: Run Cartridge"
command, MEM.SAV is reloaded and the environment should be as
it was when you left. It's probably quicker to simply "SAVE"
your programs (if in a language) which aren't nearly as big
as all of the memory that MEM.SAV saves.
+ [O] Options: this presents the user with some options. Mainly
for advanced users or special setups. See the MyDOS docs for
details.
+ [P] Set density. Forces a drive to be recognized at a certain
density if MyDOS can't figure it out. (??)
+ [Q] Make a subdirectory. (like "md" or "mkdir" in MSDOS).
+ [R] Set default directory. (like "cd" in MSDOS and "cwd" in
SpartaDOS) This makes "D:" now the same as a subdirectory or
other drive. ie, "D2:" will make all calls to "D:" act as
though they are to "D2:" instead. Some programs when
prompting for filenames do not add "D:" to the beginning if
one is not present, they add "D1:". If you don't trust a
program to look to "D:" instead of "D1:" and you want it to
look to some place OTHER than "D1:" (ie, where "D:" is
pointing which could be a VERY long path list), just add "D:"
to the beginning. ALSO, some programs don't even ADD "D:"'s
if they aren't in the filenames you give and may give errors
(138, for example: device not present, ie, if you said
"TESTFILE.DAT" it may think you want "T:" instead of
"D:TESTFILE.DAT").
+ [S] Set ramdisk number. This is also under [O]ptions.
+ [V] Verify writes. This is also under [O]ptions. When Verify
is on, writes will be slower but 100% reliable. With it off,
writes will be much faster but possibly not as reliable (on
bad disks, for example). Default is off.

AtariDOS presents the user with the following commands which are
identical to MyDOS's commands: A,B,C(no swaping),D,E,F,G,H, I(some
densities),J,K,L,M,N

AtariDOS 2.5 presents the user with the following commands not
present or not the same as MyDOS's commands:
+ [O] Duplicate file. This is used to copy a file from one disk
to another using only one drive. (In MyDOS, giving just a
source will make [C]opy act like DOS 2's Duplicate.)
+ [P] Format Single. In DOS 2.5, this is used to format 88k
(Single Density) disks. To format an Enhanced Density (127k)
disk, just use [I]. In DOS 2.0, [I] is the only format option
and only handles 88k. (I may be wrong, but I have never had a
Double Density drive under Atari DOS 2.0 or 2.5!)
* General DOS and OS questions:
1. How do I access the disk drives?

First, you need to have booted with a DOS. All but one DOS is
on disk (SpartaDOS X is on cartridge). When the Atari boots
up, it does some of its 'boot-up stuff' which includes

looking for a disk drive connected and turned on which is set up as drive #1. It then begins to load from the disk's "boot sector". If none exists or there's a nasty error on the disk, you get the "BOOT ERROR" notice until the error is fixed. (On SpartaDOS disks, even non-bootable disks have a boot sector, but all the boot sector is is a small program which displays a 'not a boot disk' error).

To end the digression, the answer to 'how do I access the disk drives' starts with 'you must boot the Atari with a DOS'. Check the 8-bit FAQ and the UMICH and other FTP archives for lists of DOSes available for Ataris, but the most used are Atari DOS (for compatibility with almost ALL older software), MyDOS (for an Atari DOS compatible high-end DOS), and SpartaDOS (for a very high-end DOS which looks much like MS-DOS but unfortunately cannont run all software which runs fine with Atari DOS and MyDOS.) Note: SpartaDOS does NOT run on Atari 400's and 800's (except the cartridge versions and I believe disk version 1.1). Now that you have a DOS loaded, the Atari understands the "D:" device (see below for Atari devices). Since there is more than one disk drive, you have to be able to tell them apart. The Atari uses numbers when it has more than one of the same device, so "D1:" is drive 1, "D2:" is drive 2, "D3:" is drive 3, etc.!

After the "D:" device name comes the filename. Of the most used DOSes, only MyDOS supports lowercase letters in filenames, but since most programs force uppercase entry for filenames, nobody really seems to use lowercase in their filenames.

2. How do I copy things from one place to another?

Atari DOS and MyDOS give you the "C" command in their menu interface. When it asks for a source and destination, you can use wildcards (* and ? like in most other DOSes) to copy more than one file at a time. You can also present no destination so that a file can be copied from one disk in drive 1 to another disk in drive 1, for example, and the DOS will ask you to insert each disk.

3. What are subdirectories?

Subdirectories are places where files go which are just like the normal directory of a disk, except the they happen to be WITHIN that normal directory, or even another subdirectory. For example, you can have your disk divided up into the "GAMES" files, the "GRAPHICS" files and the "SOUNDS" files. A directory of the disk (the "root" or "base" or "trunk" directory) will simply list the three subdirectories, "GAMES", "GRAPHICS" and "SOUNDS". Then, if you ask for a directory listing of the "GAMES" subdirectory, you will see the files (and perhaps other subdirectories) within the

"GAMES" directory. Think of it as a tree. For people familiar with Macintoshes, "Folders" are simply subdirectories. A window which appears when you open a "Disk" Icon is the "root", and all of the "Folders" within it have more windows in them which also have file and folder icons.

Here's a comparison to using subdirectories on different DOSes

root 'GAMES' 'SPACE' within 'GAMES'
AtariDOS D: n/a n/a
MyDOS D: D:GAMES: D:GAMES:SPACE:
SpartaDOS D: D:GAMES> D:GAMES>SPACE>
MSDOS (IBM) \ \GAMES\ \GAMES\SPACE\

Note, only Atari DOS would be using drive 1 here, all other DOSes are not necessarily using drive 1, and MyDOS and SpartaDOS may already 'be within' a subdirectory.

In MyDOS and SpartaDOS (and MSDOS), you can change the 'current' or 'default' directory to a different place (a different drive or a subdirectory). "D:" can stand for "D1:" (like AtariDOS always does) or "D2:GAMES:SPACE:"! PLEASE READ THE MYDOS OR SPARTADOS DOCUMENTS FOR DETAILS ON THIS!
4. What does "P:", "E:", "K:", etc. mean?

As stated before, the Atari has devices. "D:" is added when a bootable disk in drive 1 is read. Other exist as well:
o C: Cassette
Readable and writeable, no filenames.
o D: Disk Drive
Readable, writeable, random access, directory, files, multiple devices (up to 9 on MyDOS and newer SpartaDOS, 8 on AtariDOS).
o E: Editor
Readable, writeable. This is how input from the keyboard and output to the screen is normally handled. If you wish to type a small file up by hand and have it sent to the printer or a file, use "E:" as the source.
o G: Graphics Printer
Writeable. This is not built into the Operating System but must be loaded. This is an Epson-compatible printer driver which can easily dump graphics.
o K: Keyboard
Readable. This is just the keyboard. Input from it is not `echoed' back like with the "E:ditor".
o M: "Multi-Mouse"
Readable, writeable? This is not built into the Operating System but must be loaded. This is a handler which runs in the background and accepts input from either a mouse, a joystick or a touch-tablet and displays a mouse pointer on the screen.

o M: "Multiplexer"
Readable, writeable. For Atari's connected to each other via a "Multiplexer" local area network, the "MUX" Operating System replacement provides an "M:" device for computer-to-computer communication.
o P: Printer
Writeable. Send data to this and it will appear on the printer. You can print files (documents, etc.) by using "P:" as the destination. The Atari XL/XE OSes support "P1:" and "P2:", although I believe this usage is rare.
o R: RS232 (COM port)
Readable, writeable, concurrent mode. This is not built in to the Operating System, but is loaded. It supports modems. The Atari 850 Interface has it's "R: handler" 'built-in', which means the Atari also looks for an 850 (or other compatible interface) and receives the "R: handler" code from it. Other interfaces and the Atari 'direct-connect' modems require a file to be loaded which contains the "R:" code. "R1:" and "R2:" is also supported, but also its usage seems rare.
o W: Windowing (screens)
Readable, writeable. This is a graphics 8 graphical windowing driver (rarely used, unfortunately!). It must of course be loaded as well.
o Z: RTime8 Real-time Clock
Readable, writeable. This is also not built in to the OS, but loaded. This is loaded from disk and lets the user access the "RTime8" real time, battery-backed up clock for the Atari 8-bit. (This is a cartridge-based device). I am unaware of any "Z:" clone which let's you set the Atari internal (non-real time, non-battery-backed-up) clock if you do not have an RTime8, although I'd love to see one! [hint!!]
5. How do I print something from DOS?

As stated above, just use the "C"opy command, then use the file you wish to print as the 'source', and "P:" as the 'destination'. Example: "D1:DOCUMENT.TXT,P:"

-- Getting around on the Atari: BASIC --

What does "READY" mean?

Again, this is simply the prompt that Atari BASIC (and most older BASIC's) presents the user when it is in "Immediate" mode.
* Entering a command will cause it to act immediately.
* Entering a line number and then a command will place that line into the current program.
* Entering a line number alone will remove that line from the current program.

* To start a program, use the "RUN" command.
* To erase a program, use the "NEW" command.
* To clear variables, strings and arrays, use the "CLR" command.
* To load a program, use the "LOAD" command followed by a filename (see below). To load and run a program, use the "RUN" command followed by a filename.
* To save a program, use the "SAVE" command followed by a filename.
* To list a program, use the "LIST" command followed by an optional destination device ("D:file.lst", "P:"rinter) and an option start and end set of lines seperated by (a) comma(s).

Where can I learn Atari BASIC?

A (set of) file(s) will be created explaining all of Atari (and Turbo) BASIC's commands and their usage. (A larger file may be produced which will be based on examples provided in the Atari BASIC Reference Manual). (As of August 1, 1995, these particular files do not exist).

How do I quit BASIC?
* Type "DOS" to quit BASIC and return to DOS.
* Type "BYE" to quit BASIC and exit to the OS's "bye" routines (Atari Memo Pad on 400/800's, Atari Rainbow on 1200XL's, and Self Test on other XL's and XE's). (Note: On 1200XL's, use [HELP] to go to the Self Test when the Atari Rainbow appears).
* Reboot with [OPTION] held down to disable BASIC. (For emulator users, remember there are ways to totally disable BASIC.)

Why don't strings work?

Strings must be "dimensioned" like arrays in Atari BASIC. Strings are special character arrays. See the BASIC usage/etc. files mentioned in the answer to question 2. Simply put, to make a string that will accept up to "#" character, use DIM [name]$(#). Example: DIM A$(10) - now A$ can contain between 0 and 10 characters.

How do I make graphics?

Use the "GRAPHICS" command to switch between the following screen modes: (Note: All modes except 0, 9, 10 and 11 have four lines of 40 x 24 x 2 sized text covering the bottom of the screen. Add "16" to the mode number to remove this window (but do not make any PRINTs or PUTs to the standard output otherwise a GRAPHICS 0 screen will appear))

(Note: Add "32" to the mode number to keep the screen from clearing when it appears. One problem, however, all screens overlay each other so unless you only use certain modes at certain times, parts of some screens will become (or start out) with 'garbage' on them.)
* 0: 40 x 24 x 2 text
* 1: 20 x 24 x 5 text
* 2: 20 x 12 x 5 text
* 3: 40 x 24 x 4 graphics
* 4: 80 x 48 x 2 graphics
* 5: 80 x 48 x 4 graphics

* 6: 160 x 96 x 2 graphics
* 7: 160 x 96 x 4 graphics
* 8: 320 x 192 x 4 graphics
* 9: 80 x 192 x 16 luminence-only graphics
* 10: 80 x 192 x 9 graphics
* 11: 80 x 192 x 16 hue-only graphics
* 12: 40 x 24 x 4-colored text
* 13: 40 x 12 x 4-colored text
* 14: 160 x 192 x 2 graphics
* 15: 160 x 192 x 4 graphics

COMMANDS:

Commands available in Atari BASIC for manipulating simple graphics include:
* PLOT x,y - plot a pixel
* POSITION x,y - position cursor
* COLOR c - set drawing color (c=color or character value)
* DRAWTO x,y - draw a line from cursor location (set with "POSITION", "PLOT", "DRAWTO" or "LOCATE")
* LOCATE x,y,r (where r is where result will be stored)
* SETCOLOR c,h,l (c=palette location, h=hue, l=lum)

COLORS:

Note: COLOR command colors are not identical to SETCOLOR command colors:
* COLOR 0 will draw using the background color, set with SETCOLOR 4,hue,lum
* COLOR 1 will draw using color "0", set with SETCOLOR 0,hue,lum
* COLOR 2 will draw using color "1", set with SETCOLOR 1,hue,lum
* COLOR 3 will draw using color "2", set with SETCOLOR 2,hue,lum

Except in GRAPHICS mode 10, where COLORs 0, 1, 2, and 3 must be POKEd into memory locations 704, 705, 706 and 707 (the player/missle graphics color locations). Examples of this will be presented in the BASIC usage files. (Sorry)

How do I make sound on the Atari

Remember, XFormer 2.5 doesn't support sound! (XF3.0 does)
But anyway, in Atari BASIC: SOUND c,p,d,v
* c=channel (0-3)
* p=pitch (0-255)
* d=distortion (0,2,4,6,8,10,12 or 14)
* v=volume (0-15)

The buzzer character is CHR$(253) aka [CONTROL]+[2] (NOT [CONTROL]+[G])

How do I move the cursor and edit?

The Atari "E:" device (standard input/output which is the "editor")
allows the following characters for editing:

Key: AtASCII #: Use:
---------- -------- ----------
Atari none Turn inverse on/off (Atari 400/800 kybds)
Inverse [Triangle] none Turn inverse on/off (Atari XL/XE kybds)
CAPS none Turns caps-mode to lowercase (400/800 OS)
CAPS none Toggles caps-mode from upper to lower (XL/XE)
Sh-CAPS none Turns caps-mode to uppercase (all OSes)
Ct-CAPS none Turns caps-mode to [Control]-[Lock] (all)
Up ([^-]) 28 Move cursor up
Down ([^=]) 29 Move cursor down
Left ([^+]) 30 Move cursor left
Right ([^*]) 31 Move cursor right
Space 32 Move cursor right (overwrites w/Space char)
BackSpace 126 Move cursor left (deletes previous char)
Delete ([ShBkspc]) 156 Deletes a (logical) line (1-3 physical lines)
Insert ([Sh>]) 157 Inserts a physical line
Ct-Delete ([^Bksp]) 254 Deletes char under cursor, pulls rest left
Ct-Insert ([^>]) 255 Inserts space under cursor, pushes rest right
ClearScn ([^<]) 125 Clears screen
Bell ([^2]) 253 Sounds buzzer
TAB 127 Moves cursor to next TABstop
ClrTAB ([^TAB]) 158 Clears any TABstop under cursor
SetTAB ([ShTAB]) 159 Sets a TABstop under cursor
ESC 27 Sets ESCape (next edit char after is shown,
not done, non-edit chars shown (like normal))
RETURN 155 Sends End Of Line (moves cursor to lowerleft
of next line, accepts input)

Note: Inverse characters have values of the normal version of the
characters plus 128. (The only non-viewable inverse character is
inverse-ESC, or what would be the [ESC],[RETURN] combination. The
character exists, but must be set into screen RAM by hand. Oh well, at
least you still have 255 easily viewable characters! [grin])

How do I make the editor characters appear

As shown above, you must have an ESC sent before them.
* When simply entering text, type [ESC] then the edit key and the
character for that edit key should appear.
* When entering text in a PRINT statement, you must have it send an
ESC beforehand, so first type [ESC],[ESC] to make an ESCape
character appear, then type [ESC] then the edit key and the
character for that edit key should appear.
When the PRINT statement is executed, the first ESCape (which you
typed as two [ESC]'s) will make the editor SHOW the following
character (even if it is an edit character), then the character
which you entered (with [ESC] and then the edit key) will make
that character appear. This makes it difficult to align a set of
PRINT statements which make a multi-line picture or menu which

uses viewed edit keys.
It is probably best to have all of the lines in your program with the PRINT statements that can fit visible on the screen, then edit them (without putting any of the ESCape characters in, then when the picture looks like how you want it on the screen, move the cursor to on top of each edit-key character and press [Control]+[>] (Control-Insert). A blank space should appear under the cursor and the rest of the line should move right. Now, type [ESC],[ESC] and an ESCape edit-key character should appear where the blank space was. When you are finished doing that for each line with those PRINTs in it, BE SURE TO ENTER THEM INTO THE PROGRAM BY PRESSING [RETURN] ON EACH OF THOSE LINES! Whew!

Set the memory location "766" to "1" with the command "POKE 766,1" to turn on the no-edit mode (ALL characters except End Of Lines will appear, even ClearScreens!) When you want to go back into normal mode, set the location back to "0" with "POKE 766,0".

What's with the colors changing?

THIS IS THE FIRST EVER SCREEN SAVER! This is called "Attract mode" as was used on the Atari 2600 and Atari 400/800/XL/XE series (and probably on the 5200 and 7800 but I cannot confirm this). When a key hasn't been pressed for 7 or 9 (depending on OS, model, etc) minutes, the screen colors begin changing, thus protecting your TV or monitor from having an image burned on it.
* To turn this mode off, press a key, or, if within a program, use the command "POKE 77,0" at least once every few minutes (IF the screen is active, otherwise turning it off would be kinda useless).
* To turn it on, wait 7 or 9 minutes without pressing a key or having location "77" set to "0", or set location "77" to "128" with "POKE 77,128", voila! instant attract mode!

How do I access 'devices' on the Atari?

The following commands are available to Atari BASIC's (and also variations on these are available in most other Atari languages!):
* OPEN #a,b,c,d$
Opens channel 'a' for access to 'd$' in mode 'b' with auxillary mode 'c'. Channel 'a' must be free or else a 'Channel already open' (129) error will occur. To explain the different "modes", here are simply some examples:
+ OPEN #1,4,0,"K:"
Input from keyboard
+ OPEN #2,8,0,"P:"
Output to printer
+ OPEN #3,12,0,"D:FILE"
Random access to disk
+ OPEN #4,9,0,"D:DATA"
Append-output to disk
+ OPEN #5,13,0,"R:"

Concurrent to RS232 (modem)
+ OPEN #6,6,0,"D:*.TXT"
Directory access to disk (reads directory of "*.TXT" mask)
* CLOSE #a
Closes channel 'a' (freeing it for use)
* GET #a,b
Reads a byte from channel 'a' and stores it in 'b'
* PUT #a,b
Puts byte 'b' onto channel 'a'
* INPUT #a,b$
Reads a string (up to 255 bytes and a REQUIRED 'end of line'
(character 155)) from channel 'a' and stores it in 'b$'
* INPUT #a,b
Reads a string (up to 255 bytes and a REQUIRED 'end of line'
(character 155)) from channel 'a' and stores the numeric value of
it in 'b'
* PRINT #a,[stuff]
Just like the normal BASIC PRINT statement, but sends the
information to channel 'a' (semicolons, comas, and mixed types are
of course allowed).
* STATUS #a,b
Reads the error 'status' of channel 'a' and stores it in 'b'
* XIO a,#b,c,d,e$
General I/O call. This a little complicated and may be expanded
upon in a future revision. Just be aware of the following:
+ a - command
+ b - channel to use (usually must be free)
+ c - auxillary mode 1
+ d - auxillary mode 2
+ e$ - file or device to act upon
Examples:
+ XIO 32,#1,0,0,"D:FILE,OLDFILE" renames file
+ XIO 33,#1,0,0,"D:OLDFILE" deletes file
+ XIO 34,#1,0,0,"D:GAMES" creates a directory in My- &
Sparta-DOS
+ XIO 35,#1,0,0,"D:NEWFILE" locks a file from over-write and
deletion
+ XIO 36,#1,0,0,"D:NEWFILE" UNlocks a locked file
+ XIO 40,#1,4,0,"D:PROG.OBJ" loads and runs a binary file (like
"L" in Atari and MyDOS)
+ XIO 40,#1,5,0,"D:PROG.OBJ" loads a binary file (like "L" in
Atari and MyDOS with the "/N" option)
+ XIO 41,#1,0,0,"D:GAMES" changes default directory that
drive/subdirectory (all calls to "D:" will now occur within
that drive/directory)
+ XIO 254,#1,0,0,"D2:" FORMAT a disk (in Atari DOS 2.5, this is
format 'enhanced', to format 'single' density, use XIO 253)
(in MyDOS, this is format, but not 'enhanced', use:
+ XIO 253,#[channel],1,0,"D[drive]:" for formatting a drive in
enhanced mode).

NOTE: 39 and 40 are the same. Also note the useage of AUX1 in the "XIO 40" example.

-- Getting Atari files to an IBM: --

1. How can I read Atari disks on my IBM?

Note: Someone please give more details or corrections here! Thanks!

If you have double-density Atari disks, you can use the program "Util" on the IBM which can read double-density Atari disks. Please see the Atari 8-bit FAQ for more details.

If you have an Atari 1050 disk drive, you can use the program MULE to copy files, one file at a time, 20k chunks at a time, from the Atari to the IBM. You first must format a 180k disk on your IBM, the run MULE on your Atari to get a file onto the MULE disk, then run MULE on the IBM to get the file onto the IBM. Tedious, isn't it? MULE wasn't meant to be a fully-functional program, just a demo to show that this was even possible.

If you're fortunate to have a Black Box interface on your Atari, you can get an external IBM drive and the Black Box's add-on, the Floppy-Board and simply copy files from your Atari disks or hard drive(s) onto IBM disks via the floppy board, then load them up on your IBM.

2. Ok, I can't do any of that, now what?

You can use SIO2PC, which is a program for IBM's which turns your IBM into a set of Atari disk drives. You need the SIO2PC cable (which you can purchase, assembled or unassembled, or buy parts and build it yourself) and the SIO2PC software (available at UMICH). Connect your IBM to your Atari, load SIO2PC, and then run the program FILE2PC on the Atari to transfer files to the IBM's hard drive. Or instead create a disk image within SIO2PC and copy files from one disk (a real Atari floppy) to another (the SIO2PC image) with the Atari or MyDOS "C"opy command. If you want to extract files out of the SIO2PC disk image file and store them on your IBM's hard drive or floppies as single files, either again use FILE2PC or use S2PC, an IBM program which can extract files from or add files to MyDOS-compatible SIO2PC disk images!

You can use two modems (one on your PC and one on your Atari) to download files from your Atari 8-bit.

If you don't necessarily want files that you already have on your Atari 8-bit, you can download files from the huge collection available at FTP sites and Atari 8-bit supporting bulletin boards and save them onto your IBM.

If you have only one modem, so you can't connect both your Atari 8-bit and your IBM together via modems, you can do it via null-modem, OR you can upload files from your Atari to some bulletin board or account you have access to, and then connect the modem to your IBM and download the files.
3. Is there any easier way to get Disk Communicator (Atari disk image) files to and from SIO2PC disk images or PC Xformer XFD disk images other than using Disk Communicator 3.2 on my Atari! I mean, both files are disk images! They're both on my PC's hard drive! [cry]

(AND NOTE: DiskComm. doesn't like SIO2PC a lot of the time anyway!)

Yes! There's an IBM program out called "DCM2DSK". (Why "DSK" and not "ATR"? To keep people from getting confused with the ATR-8000(?))

There's also C source to a very similar program called "DCMTOATR" which works on PC's (a PC executable version comes in the archive) and Unix and probably any other system with a good C compiler.

-- Where to get or FTP files mentioned in this FAQ: --

+ PC Xformer 2.x can be downloaded via FTP from:

It sure would be nice if we had a utility to dump GIF (or whatever format)
pictures to either a laser or (color) jet printer? In full detail, just like
it would have looked when "Pentium" would have send it to the printer.

BTW I neither have the knowledge nor the printer.

w >read as: +31-(020)-676-4584 ... except that there would be a '1' in
w >place of the '31'. Just out of curiosity, how is a European telephone
w >number subdivided ?

Howdy Winston

I'm not Bernard, but I live in the same country.

In the near future, all of Europe will use the below scheme.

You dail 0 (zero) to get ot of something

If you have a PBX, you dial 0 to get an outside line.
If you want to dial long distance, you dial (another) zero.
If you want to dial international, you dial zero again.

(the + in the phone number mean "insert you international access code here")

31 is the country code for the Netherlands as 1 is for the USA.

020 is the area code for Amsterdam. Since you're calling from outside the
country, you leave off the first zero (you don't want to get "out off"
something, you want to call "into" something.

In the Netherlands, area codes are either three or four digits long (including
that first zero). Area code and subscriber phone number together are
ten digits. (If they would have reduced all area codes to three digits,
they would have had to change the size of the "local area's".)

k >to yourself "just give up!" Then you think "well wait, what ELSE can it
k >do??" :)

I like that feature of MyDOS. It just keeps looking. If you're using 4.53/3
and pressing 1 to tell the Ramdisk handler not to format the RAMdisk while
cold starting (it's nice to have either the USplus OS or the BlackBox by
CSS. I have both. I love both.). This has the nasty side effect that MyDOS
will load DUP.SYS from the default drive instead of the RAMdisk. Next time
MyDOS wants to load DUP.SYS, I just turn some levers and push some buttons
(on 5.25 and 3.5" drive mechs respectively). And if there IS no DUP on any
of the disks, incl. the RAMdisk, you still have time to look of a disk that
has. Both the US+ and the BB/FB also have a menu, go into either and the
disks will stop spinning (and so will your head).

R >Subject: Re: Does anybody use TopDos?
R >Date: 29 Nov 1995 23:27:24 -0500
R >
R >(TopDOS user asks about SpartaDOS.)
R >The command line interface is a little convenient. Just type the name
R >of a .com file to run it, instead of L and the full filename. The

You can always use wildcards (? or *) instead of typing in the whole name.
I hate it when I have to remember when to include .com, when I can leave it off
and that if I use a file without extender, I should make this very clear to
SpartaDOS.

I like it when I have "hot keys" instead of having to type ERASE, COPY, DIR
or even DIR D?:

And I do NOT have to use some "eternal" command to just format a disk.

R >principle advantage is the ease of getting around. You can turn BASIC

Ha, Ha, Ha. Are you REALLY talking about SpartaDOS???

Have you ever tried to shorten a textfile? Chop either the first sectors or
take out a bunch?

Ever lost a file/directory entry/hole directory/formatted part of the disk.
And Sparta uses sectors on the first track, so if you accidently format the
wrong disk, you can kiss those files goodby.

R >on and off with TopDOS, but basic on or off is built in to SpartaDOS.
R >Also, as far as I know, SpartaDOS is the only DOS that can run, copy,
R >delete any DOS, not only SPartaDOS, but menu DOSes as well.

It can NOT use double density disks in NON-Sparta format. On single density
it put's a B where it should put an F in the file status byte (first character/
byte in the directory for each file.) This prevents you from (I guess it was)
deleting that file from within other DOSses then SParta.

And then the argument often heard that the byte count on SpartaDOS is much
more accurate then the sector count of other DOSses. Well, other DOSses
tell you EXACTLY how many sectors are used. SpartaDOS tells you how much
"data" bytes a file uses, but every file still has to start at the beginning
of a sector. All the bytes lost between the end of the file and the start of
the next are not mentioned/accounted for. And SpartaDOS doesn't tell you
how many sectors it uses as a sector map. (e.g. a two byte file takes up 512
bytes, SpartaDOS tells you it uses two bytes!!!)

Yes, I'm a MyDOS man. I use SpartaDOS because I have to use it for PabQWK.
I never liked SpartaDOS before I used it. Now that I do use it, I HATE it.

21. ST mouse on 8 bit Atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-01 00:00:00 UTC
From: mathniss@link.xs4all.nl
Message-ID: <4c9grj$15r@link.xs4all.nl>
Source record: 86746

```
m >From: msteve@magnus.acs.ohio-state.edu (Michael Steve)io-state.edu!msteve
m >Subject: Re: ST mouse on 8bit (was Re: 8bit questions)
m >Date: 30 Nov 1995 05:12:00 GMT
m >
m >Depends on your definition of compatible... If I remember the ST mouse uses
m >both trig(0) and trig(1) for its mouse buttons. So as long as you don't mind
m >sacrificing 50% of your button input capability, you can be fine.
m >
m >Though the above is 'configured' for the ST's...
m >
m >But I could be, wrong, I'll need to check...

You are :-)

I bought an ST mouse for my XE's at the annual meeting of the German ABBUC.
Not that I needed it (I know S.A.M. (the german GUI, not the speach software)
and Diamond GOS can use them, but I don't really like either.) I just wanted
one. (silly me)

I just checked:

STICK (0) reads the movement of the mouse
STRIG (0) reads the left button
PADDLE (0) reads the right button

that is if:

- you plug the mouse in port zero
- you "prepare" the mouse. There is a little mod you can do to make the
computer read the right button. I just plugged a resistor into the connector
(mouse cable side) inside the mouse. Between the red and the white wire.
the resistor is 4k7 Ohm (when you press the right button the value should
change from 228 to somewhere below 9. Mine changes to 3.)

CU Mathy Van Nisselroy mathniss@link.xs4all.nl

PS somebody from St.Pokey in the Netherlands (John Maris, aka The Missing Link)
once found out that if you use tables to compare the mouse data too, the mouse
driver doesn't slow the computer down much.

24. Re: "Pool" disk

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-01 00:00:00 UTC
From: "Ernest.R.Schreurs" <ernest@pi.net>
Message-ID: <4c9sca$ql7@neptunus.pi.net>
Source record: 86749

Some comments were raised concerning the POOLDISK CD. For some odd
reason, this message never appeared here at my Internet provider,
or it was removed very soon after it had been posted.
Fortunately Statz quoted this text below:

>Why is the Pool CD mostly in ATR format?!? I thought it would be "BBS
>ready" CD-ROM for use on a BBS so 8bit users can use the disk. FORCING
>8bit users to need an ST or IBM to decode the software is rather asinine
>and short-sighted. I thought it was going to be files on it that were
>ready to use, but alas, the creators have lost sight about what the
>CD-ROM should have been about. Our club was planning on ordering it, but
>I now have urged them to forget it. It isn't worth our time. It's truly
>a sad day.
>
>The last I looked, Atari 8-bits can use DCM and ARCed files. So far,
>there isn't any ATR conversion that my 8-bit can do, thus making the Pool
>CD totally useless to a large portion of Atari 8-bit users. And I
>thought this was comp.sys.atari.8bit, but it's turning into
>comp.sys.atari8.atr
>
>Sad.
>

There were more people asking us why the CD did not use the DCM format.
The CD was created as a means to backup diskettes to a media that would
not deteriorate. Also, since there are emulators that need software,
the CD uses the ATR format that can be used by the PC-Xformer. Since
the ST version of the Xformer uses XFD format, all files were included
in the XFD format as well. Of course, this also makes the files
available to the 8-bit, since what good is a backup if you cannot access
it, so this CD can be used for the Xformer and for the 8 bit system
itself. It is true that a PC or ST is required in order to read the CD.
SIO2PC has been around for years, so this is a well accepted means of
storing files on a PC-host hard drive. A CD is no different than a hard
drive, so this is a natural choice. Currently an 8bit system cannot
access CD-Roms.
When I posted the announcement, remember that the title for it was over
2000 ATR images for use with Xformer and SIO2PC. Anyone hoping for
something different cannot blame me, this was clear enough.

Having said this, we would have loved to write the CD in a format that
can be used by an 8bit system without a PC. This would require a Black
Box, or a MIO or an IDE interface. Also, it would require lots of driver
software to support the ISO-9660 file format, and the 2048 sector size,
although that could be set to 512. None of these drivers currently

exist. If there is no interesting CD available, no one will ever write these drivers. James King created a CD several months ago. He told me he sold only 10 copies of it. We sold over 50 now. That makes less than 100 users. Who is willing to write a driver for 100 users nowadays? On the other hand, if one of those 100 actually does write a driver, more users will want a CD-rom drive. Now that these CD's exist, it is only a matter of time before these drivers are written. Depending on these drivers, it might make more sense to write CD's for the 8bit in a different format. For now, the ATR format appearantly is preferred over the normal file format that James King used. He was thinking about a second CD, and I have read a message from someone that obtained several old club libraries and he is going to put them on CD too. Our CD was full, so there was no room left for DCM files. If anyone makes a CD, I hope they will consider your comment John.

Writing a CD with files in DCM format is only useful for use on a BBS. We never said the CD was BBS-ready, although I believe there is a program that allows the 8bit to download an XFD file directly from the modem to a floppy disk. But even if the CD would have been made BBS-ready, most of the files should not be in a disk image, but should be on the CD as individual files, not in DCM files. Only bootable games and demos would require the DCM format. There is 250 Mb of ATR files on the CD, and anyone willing to do so can copy stuff off it and convert it to a format that is downloadable. Most BBS systems already have stuff on their BBS in this format though, so this all would not be shocking news. We have copied stuff from BBS'es and converted them to ATR format in order to make these files available on the CD.

We welcome comments on our work. Thanks to everyone that has taken the time to post about the CD, or read all of this. If you have complaints or other comments feel free to E-mail me: ernest@pi.net

Regards, Bo and Ernest Schreurs, the creators of the POOLDISK CD.

(No offline reader, so no quotes of Mathy Van N.'s original txt.)
You prefer the 'menu' type DOS. I used 'SmartDOS' for many years prior to going Sparta. Sparta will read, write, delete, rename, protect/unpro., copy, etc. MyDOS, SmartDOS, Top Dos (as far as I know). It has no problem sngl or dbl density with these functions on those menu type DOSes. Sparta's xinit does a lot more than the internal DUP formats. The point I was making was that DUP doesn't have to be loaded, you can do many DOS functions and not touch $2000 to $BFFF. xinit is one function that will use above $2000.
I shorten a text file with a text editor, specifically 'Speed Script' which I keep on MIO ramdisk and can use in less than a second. How do you shorten a text file with MyDOS?
You said that Sparta uses sector 1 and if you format you'll lose all files. How do you recover files after you format with MyDOS?
I try be DOS universal with anything I write and, yes, have a preference for Sparta, but if you like Top or MyDOS I would try to accomodate you with any program I write.
My biggest problem with MyDOS I didn't mention in my original post. MyDOS messes up my MIO RAMdisks if I hit RESET and at odd other times. I mean I have to re-format and load all my regular files onto my MIO RAMdisks when this happens. I have to be careful to turn off the computer and back on to exit from MyDOS DUP and re-boot Sparta. I don't like to turn my computer on and off.
I suspect you aren't mentioning reasons why you prefer MyDOS. I suspect MyDOS functions much better with your BB than Sparta. Bob Puff and ICD had a war going and they, especially Puff, did things to mess up each other's products. I mentioned how MyDOS messes up my MIO RAMdisks. Another 'war' thing was Puff's 'Black Patch' won't run on a ICD US dbler 1050. Another reason I suspect you prefer MyDOS is that you use Turbo BASIC a lot. There is a Sparta compatible Turbo BASIC, but I don't use either very much.
I hope this isn't a critism of Puff. I cannot fathom why Puff would try to be ICD incompatible or why Tom Hunt would write Sparta only programs (actually T. Hunt says he writes stuff for his own use and that's why some programs turn out that way, but I suspect there's more to it.) The last set of programs I wrote turned out to be partly MyDOS incompatible, but that was an accident using an XIO command

of Sparta which can determine what DOS is in a drive. And
finally, I don't intend this as a put down of MyDOS,
Marslett, Puff, certainly not.

I don't want to send it to the graveyard yet so...

I am looking for help on how I can diagnose the problem with my 1050
drive.
I actually have two drives...the other one works. The broken drive
exhibits
the following:

I turn it on and the power light comes on, but no drive movement occurs
and
the drive is not accessible from the atari.

I have narrowed (slightly) the problem down the the board in the drive.
The
drive assembly/mechanism works fine when placed in the good drive. Also
the problem is not in one of the two chips that come with the ICD
doubler
package - I swapped these between the two drives and they work ok.

Are there certain test points on the board that I can probe...would I
need
a logic analyzer or 'scope?

Ack.

Cyrus

But as long as we're doing a wish list for sio2pc/APE. Here be my problem:
I frequently do upgrades for MS DOS type folks in addition to just regular
junk hunts, figure every drive I have hooked up to my ATR8000 was salvaged
from a clone of one brand of another. So my current wish list includes
setting up one of these old motherboards with nothing but a HD, i.e.
no monitor, keyboard. With SIO2PC I can set this up to mount several
drives, but APE has an into screen with a "press any key to continue"
So... I'm reduced to running sio2pc in this set up. I'm giving serious
consideration to getting rid of some of the clutter I've got. I would
prefer to have maybe a single US Doubler with an automated sio2pc
setup vs this herd of 1050's, ATR, full blown pc, but the sio2pc software
is just not strong enough to stand on its own in this config.

I'm not sure if this will help, but when I had a similar problem, it
turned out I had the doubler chips in the sockets the wrong way.

31. A message to OS/DOS developers (updated)

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-02 00:00:00 UTC
From: CONRADUS@plearn.edu.pl
Message-ID: <960102.195059.CET.CONRADUS@PLEARN.EDU.PL>
Source record: 86610

A message to Operating Systems/Disk Operating Systems developers.
(revision 1.1)

Dear developer!

We are pleased to present you the next version of the preliminary document about our IDE hard drive interface for Atari 130XE (and compatible) computers. Since the last doc has been posted, we decided to improve the Interface's internal software a bit. All previous features and last minute updates have been described below.

As existing Disk Operating Systems aren't able to use all the capabilities we provided, we are kindly asking you to upgrade the latest versions of your work and implement the specific IDE features, those have been described below. The four general problems we found trying to use any of the existing DOSes, are as follows:

1) All DOSes we tested, i.e. SpartaDOS 3.2g, SpartaDOS X 4.20, MyDOS 4.53 and BWDOS 1.10, when they have been executed, seem to force the DUNIT (�0301) value to �01. Such action is not necessary, because the DUNIT is already set by the XL OS, and is obnoxious, because, as a result, the DOS is unable to read its additional files (like DUP.SYS, AUTORUN.SYS, CONFIG.SYS, STARTUP.EXC etc.), when the system has been started from a partition other, than D1:.

2) All the DOSes we tested are unable to read/write 512-byte sectors, so they cannot work in the IDE native mode (see below). The interface provides the emulation mode to handle 256-byte sector operations, but, as a result, the drive is unable to reach its full speed. Especially any writes to the hard drive are very slow. The implementation of the 512 byte allocation units may also be profitable in the future, if we decide to add support for DMA transfers.

3) All the DOSes we tested are unable to handle big partitions (i.e. over 16 MB limit). The implementation of the 512 byte allocation units may solve this problem in a part (the limit would be 32 MB per partition then), but, if you decide to implement big partitions handling, we advise you to consider about using the 24-bit sector addressing in conjunction with the larger allocation units (see below for details).

4) All the DOSes we tested are unable to handle disks D10-D16.

Operating Systems developers please note, that the DDEVIC
and DUNIT values should be set before PBI devices
are initialized.

We hope, that you will take these problems into consideration,
decide to support the features described below and don't hesitate
to send us your comments, if any.

Regards

Konrad Kokoszkiewicz

I. Introduction

Seven years ago, when I first heard about hard drives for the
Atari 8-bit, a 20 MB SCSI device's price was over 600 USD and, of
course, was out of reach for people in a country on the wrong
side of the Iron Courtain, where wages were about 20 USD per
month. The 1050 floppy drive was a dream - what would I say about

the hard one...?

Over the next six years, when the Iron Courtain got rusty, many things have been changed. Among others, we have started earning more money, we have got some new Atari computers and, simultaneously, the prices of hard drives have gone down dramatically... and one day I realised, that it is possible to obtain an IDE hard drive for the beloved 8-bit Atari with very reasonable price! But there still was no documentation and the only one, that I knew, was a theory about writing 'new device' handlers for the XL operating system...

The most important thing on my "way to the hard drive" has happened, when a friend of mine has found a "Technical Reference Manual" for the Caviar WDAC2200. I read this paper very carefully, then went to Jack - a person, who looks to know everything about wires and other strange gadgets, those have been fixed inside and seem to make it work. About a week later Jack said, that there was no objections (contraindications, as we used to say) to build an interface - so the project started.

The last year we spent thinking, talking, building the hardware (Jack), writing the software (me), testing, fixing bugs, catching incompatibilities, and learning, learning, learning. We have discovered a lot of strange things about Ataris and IDE hard drives (some of them have been mentioned below). Finally, we are pleased to present you our results - we tried to make them as professional, as it have been allowed by the limited (2k) ROM space, not very "elastic" operating system and not very great processing power of the Atari 8-bit computer. I hope you will agree, that we did a good job.

II. Capabilities overview

The Interface's internal software provides two modes: native and emulation. The native mode uses a 512 byte physical block as a logical data sector, the emulation mode uses the physical block to store two 256 byte logical data sectors. ALL existing DOSes require the emulation mode to work properly (a DOS, that will be able to use the native IDE mode, is under development).

Maximum drive capacity: 16777215 physical blocks on each device.
Maximum number of partitions: 16
Maximum capacity of a partition: 16777215 logical sectors
Logical sector length: 256 or 512 bytes (larger blocks will be implemented in the future)
Average speed (in kilobytes per second):
Native mode, sequence of sectors (R): 75
Emulation mode, sequence of sectors (R): 43
Emulation mode, back sequence (R): 28
Emulation mode, random sectors (R): 13
Emulation mode, same sector (R): 29

Emulation mode, DOS file (W): 7
Emulation mode, DOS file (R): 36
Booting from any partition (on the standard XL OS)
Write protection capability
8 jumpers to set the device number for the operating system
Sweet 16 compatibility

Note, that ALL existing DOSes limit the partition size to 16 MB
and the maximum number of partitions to 8 or 9.

III. How to make it work (step by step)

1) Make sure, that the power on your computer is turned off.
2) Insert the interface to the connector at the back side of the
computer.
3) Connect the interface and a 3,5" IDE drive with the cable.
Caution: You may damage the drive if the interface cable is not
connected properly. Make sure, that pin 1 on the cable (red line)
is connected to pin 1 on the drive and on the interface (red
dot).
4) Connect the power supply and the drive.
5) Insert the utilities disk into drive 1.
6) Turn on the power on the hard drive and on the computer
holding down the SHIFT key. Make sure, if the drive is spinning
up properly. If not, turn the power off, check the connections
and try again. Note, that some very old drives need A LOT of
power, so our power supply may not be sufficient.
7) Be patient - the Interface waits some seconds when the drive
is spinning up.
8) When the MyDOS is ready to use, execute the FDISK.COM file.
9) A menu should appear. If you see a message like "Device not
found" instead, please turn the power off, check the connection
between the interface and the computer, then try again. Check the
jumper position.
10) Select the "Surface test" from the main menu. Your drive will
be tested for bad sectors. If the test finishes without any
message, the drive is in good condition - no bad sectors have
been found.
11) Select the "Partitioning" from the main menu. "Total" will
indicate you total amount of 512 byte sectors, that have been
found on the drive, "Remain" - total amount of sectors, that
haven't been allocated yet, "Specs" will show a number of
cylinders, heads and sectors per track.
12) Use arrows to select a drive you want to be a partition.
13) Press the RETURN key and type in a number of sectors, that
you want to be allocated to the partition. Note, that it is a
number of real, 512 byte sectors, so if you specify 32767, the
DOS partition will have 65534 logical, 256-byte sectors.
14) Press RETURN to confirm the number of sectors or press ESC
key to cancel.
15) If you want to have more partitions, repeat the last three

steps as many as you want.
16) Press the TAB key and select a partition, that you want to be the BOOT partition. If you are the SpartaDOS X user and you want to have the CONFIG.SYS on the hard drive, the BOOT partition must be D1:, so you should change the physical number of your floppy drive to D2: or another.
17) Press RETURN key to set the BOOT partition.
18) Press the TAB key to move the cursor to the menu at the bottom right corner of the screen.
19) Select the "Opts" option.
20) Select the boot type according to your system configuration:
- "controlled", if you want to boot up MyDOS (or another DOS) from other partition than D1: The interface will take full control over the boot process.
- "pass", if you want to boot up MyDOS (or another DOS) from D1: The interface will pass the control over the boot process to the operating system. Select this option, if you have any troubles with the "controlled" boot up - taking the control over the boot process the interface uses some hints that may not work with some DOSes, cartridges or upgraded (customized) operating systems. You MUST select this option, if you are the SpartaDOS X user.
21) Press ESC to exit the "Options" menu
22) Select the "Write" option to write the new partition table to the drive.
23) Press ESC to return to the main menu
24) Select the "Soft format" option from the menu. The FDISK will attempt to build new directories on the attached partitions. Note, that the SpartaDOS 3.2 does not provide such action - to do it, you must use a separated formatter, like the P_FORMAT.COM.
25) Exit the FDISK.
26) Write the DOS file(s) to the BOOT partition. If you are the MyDOS user, select the "H" option from the DUP menu. If you are the SpartaDOS 3.2 user, copy the DOS to the BOOT partition and use the BOOT command to make the disk bootable.
27) Press SELECT/RESET to cause the cold boot. The DOS will load itself from the drive - the installation process is completed.

Some IDE drives used to clear the BUSY and assert the READY bits in the internal status register *before* the spin-up process is finished - the drive looks to be ready, but isn't ready in fact and cannot execute any commands (very strange, by the way...). To prevent such troubles during power up, the internal software waits about 5 seconds before taking any action with the IDE controller. This delay is not necessary during the cold boot, that has been caused by from the keyboard or via OS entry RESETCD (�E477). In this case the internal software uses a fast initialization method. However, if you turn the power switch off and on very quickly, the initial routines may not recognize this boot process as a real power up. As a result, the boot process will crash. To prevent such problems, after turning the power

off, you should always wait 10-15 seconds before turning it on again. This time should be sufficient to invalidate internal flags, that have been located in RAM.

IV. Keystrokes

SHIFT/RESET disables the drive. The drive will remain spinning, but the partitions will not respond to operating system requests (error 138). To enable it again just press the RESET key.

SELECT/RESET forces the cold boot.

V. Write-protection feature

The IDE hard drive interface provides the write-protection feature to minimize the risk of accidental data damage caused by viruses, damaged software or children. When a partition is locked, there's NO POSSIBILITY to write data to this partition or unlock it by asserting commands, causing a cold boot or turning the power off and on. Damaging a write-protected partition by writing accidental data to random memory locations is also *practically* impossible - the risk is very small.

VI. Executing non-DOS software with the hard drive

Some software, especially games and demos, have their own disk formats and cannot be copied to a partition. However, the IDE software provides limited capabilities to execute such programs.

If you selected the "controlled" hard drive boot when partitioning the drive and your BOOT partition is not the D1:, you may run the non-DOS disk from the floppy drive. To do it, insert the disk into the floppy disk drive then press SELECT and RESET keys holding down the SHIFT key. The internal software of the IDE Interface will pass its initialization routines and your computer will boot up from the floppy. The hard drive will be "invisible" for the system.

If you want to execute such software from the hard drive, you must provide a small partition to use it in such manner. Though the D10-D16 partitions are invisible for existing operating systems and cannot be accessed by DOS, they may be booted as well. When you are partitioning your drive, create a small (up to 520 physical blocks) disk, for example D10:. When you complete the installation and make the drive work, execute the FHCOPY.COM file from the utilities disk, then copy your floppy to the D10:. Now execute the FDISK, select the "Partitioning" option from the main menu, then press the TAB key twice to move the cursor to the menu at the bottom right corner of the screen. Select the "Opts" option, then set the "Drive redirection" to D10:. If the "controlled" boot-up have been selected, you must change it now to the "pass" mode. Write new partition table, exit the FDISK and reboot the system - the non-DOS program will load itself from the

hard drive. To return to the previous configuration, insert the utilities disk to your floppy disk drive, reboot the system holding down the SHIFT key, then execute the FDISK, reset the "Drive redirection" and "Boot type" to their previous state, write the new partition table, exit the FDISK and reboot the system.

VII. Dual drive configuration

The IDE drive interface is able to handle two IDE devices configured as master and slave drives (please refer the drive's manual to connect it and set up properly). However, some drives, when they are configured to work as the slave device, used to wait some seconds before they start spinning. For this reason, the Interface DOES NOT INITIALIZE the slave drive during power up. It would make little sense, because the drive is not spinning (i.e. is not ready) at that time. As a result, the slave drive remains not initialized, even if the boot process has been finished and the system looks to be ready to use.

If the slave drive have finished the spin-up process, there are two ways to make it work properly:
1) assert the ALL RESET command (see next section), or
2) force the system to read a sector from any partition, that have been allocated to the slave drive - if the drive is ready, it will be recalibrated automatically.

Please DO NOT start the operating system from the slave drive partitions.

VIII. Software development information

The IDE drive partitions operate as normal floppy drives or ramdisks and can be accessed via OS DISKINT (�E453) and SIOINT (�E459) routines. To access a partition you should set the DDEVIC (�0300) value to �3x (the first 4 bits are ignored by the Interface's software) and the DUNIT (�0301) to a number of a partition. The proper DUNIT value for the sixteenth partition is �10. All the partitions recognize the following commands:

R - read a sector - this command reads a specified logical sector from a specified partition. It reads ALWAYS THE WHOLE LOGICAL SECTOR, i.e. 256 or 512 bytes, according to the current mode and regardless of the DBYT value. The sector number is a 24-bit value, the most significant byte (now called DAUX3) is located at �0307 (this byte was unused by the XL OS). Sector numbers less than �000001 or greater than maximum sector number for the specified partition are invalid and will cause the error 144.

P - put a sector - writes data to a specified logical sector on a specified partition. There are the same restrictions, as mentioned above. This command will return status 144 when

attempting to execute on a write-protected partition.

W - write a sector - the same, as "P" command.

S - read status block - transfers the 4-byte disk status to the
memory. Bits of the first byte are as follows:
7 - not used by the hard drive
6 - write protection enabled
5 - double density drive (always 1)
4 - master ready (usually 1)
3 - slave ready
2 - not used by the hard drive
1 - not used by the hard drive
0 - not used be the hard drive
NOTE: if you disconnect a drive without resetting/reconfiguring
your system, the bits 3 and 4 will remain in their previous
state. To update internal status information, you should assert
the ALL RESET command (see below).

The second byte provides reversed (eor'ed with $FF) value of the
IDE controller error register. Bits are as follows:
7 - BBD - Bad block detected
6 - ECC - Error correction code (uncorrectable error)
5 - NUL - unused, always 1
4 - IDNF - ID not found (target sector could not be found)
3 - NUL - unused, always 1
2 - AC - Aborted command
1 - TK0 - Track 0 error (unable to find a valid track 0)
0 - DAMNF - Data address mark not found
The normal (default) value of this byte is $FF. The next byte has
a dummy value $E0. The last byte of the status block holds the
number of retries for the software IDE handler in ROM.

N - read configuration - reads the 12-byte PERCOM block to the
memory. The values returned by a partition are as follows:
0 - number of tracks (always 1)
1 - Interface's software revision number ($10 = 1.0)
2 - total number of logical sectors, the middle byte
3 - total number of logical sectors, the low byte
4 - total number of logical sectors, the high byte
5 - additional information:
bit 3 - IDE hard drive partition (always 1)
bit 2 - double density drive (always 1)
bit 1 - 8 inch floppy disk drive (always 0)
6 - number of bytes per logical sector, high byte
7 - number of bytes per logical sector, low byte
8 - unused, always $FF
9 - value $49
10 - value $44
11 - value $45
The last three bytes contain an identifier of the hard drive type

("IDE").

�E6 - sleep drive - stops the drives and deactivates their internal controllers. This command needs the number of ANY partition stored to the DUNIT (�0301).

�E7 - all reset - resets and recalibrates both hard drives. It is the only way to exit the Sleep mode. This command needs the number of ANY partition stored to the DUNIT (�0301).

�EC - identify drive - transfers the 512 bytes of data, that specify the drive's parameters. The fields are as follows (F = fixed value, V = variable, R = reserved, should be zero):
0 - vendor specific information, bits are as follows:
15 - 0, reserved for non-magnetic devices (F)
14 - vendor specific (F)
13 - vendor specific (F)
12 - vendor specific (F)
11 - vendor specific (F)
10 - vendor specific (F)
9 - vendor specific (F)
8 - vendor specific (F)
7 - removable media device, if 1 (F)
6 - removable controller and/or device, if 1 (F)
5 - vendor specific (F)
4 - vendor specific (F)
3 - vendor specific (F)
2 - vendor specific (F)
1 - vendor specific (F)
0 - reserved (R)
2 - number of cylinders (F)
4 - reserved (R)
6 - number of heads (F)
8 - vendor specific
10 - vendor specific
12 - number of sectors per track (F)
14 - vendor specific
16 - vendor specific
18 - vendor specific
20-39 - serial number, ASCII characters (F)
40 - vendor specific
42 - vendor specific
44 - number of ECC bytes transferred on LONG operations (F)
46-53 - firmware revision, ASCII characters (F)
54-93 - controller model number, ASCII characters (F)
94 - numbers of sectors/interrupt R/W multiples, bits:
15-8 - vendor specific
7-0 - �00 = READ/WRITE MULTIPLE not implemented (F)
�01-�FF = maximum number of sectors that can be transferred per interrupt on READ/WRITE MULTIPLE commands (F).

96 - reserved (R)
98 - capabilities, bits:
15 - reserved (R)
14 - reserved (R)
13 - 1 = standard standby timer values are supported
0 = standby timer values are vendor specific (F)
12 - reserved (R)
11 - 1 = IORDY supported (F)
0 = IORDY may be supported (F)
10 - 1 = IORDY can be disabled (F)
9 - 1 = LBA supported (F)
8 - 1 = DMA supported (F)
7-0 - vendor specific (F)
100 - reserved (R)
102 - PIO data transfer cycle timing (F)
104 - DMA data transfer cycle timing (F)
106-511 - reserved
All values are in standard low/high convention. Some parameters
are defined as a string of ASCII characters. For the string
"Copyright", the character "C" is the first byte, "o" is the
second byte etc. When such fields are transferred, the order of
transmission is:
- the 1st character ("C") is on bits 15 through 8 of the 1st word
- the 2nd character ("o") is on bits 7 through 0 of the 1st word
- the 3rd character ("p") is on bits 15 through 8 of the 2nd word
- the 4th character ("y") is on bits 7 through 0 of the 2nd word
etc.
Note, that the DMA transfers, although may be supported by the
drive itself, may not be supported by the current version of the
interface's hardware. IDENTIFY DRIVE command needs the number of
partition stored to the DUNIT (�0301).

�EE - force media change - forces the interface to re-read the
partition table from the drive. This command needs the number of
any partition stored to the DUNIT (�0301).

```
All other commands will cause error 139 (negative acknowledge).
Note, that the software does not provide a FORMAT DISK command -
it hasn't been implemented to prevent an accidental data damage.
The drive must be formatted using the FDISK program.
```

Operating system developers should note, that the internal
software of the IDE Interface sets the DUNIT (�0301) to the BOOT
partition number during boot up.

The Interface's internal software uses the internal RAM area at
�34-�3A. The PDVMSK (�0247), PDVRS (�0248) and DCB variables
(especially DAUX3 �0307) should be used only in their proper
functions (please DO NOT use them as temporary data registers!).

```
IX. Error messages
```

You can get the following error reports from the IDE drive:

138 - Timeout error - attempting to read or write data to a partition, that is physically allocated to the slave drive, while the slave drive is busy, not ready or does not exist at all. It may occur, if you disconnect the slave drive without reconfiguring your system or attempt to reset any drive while it is not present. It may also indicate a damaged partition table - please reboot your system. If this action doesn't cause any effect, you must use the FDISK to repair the partition table. See also section VII. - "Dual drive configuration".

139 - Invalid command

144 - Device done error:
1) the software attempted to write data to a write-protected partition.
2) the software attempted to read or write data outside of the limits, those are valid for the partition.
3) there is a bad sector on the partition. Please assert the "S" command to get the value of the internal IDE error register.

X. Known incompatibilities

1) 400/800 OS - no support for PBI devices
2) Q-MEG OS 3.2 - no support for PBI devices
3) some demos for unknown reason

Some programs are executed by a call to the RESETWM routine (�E474). It usually does not cause any troubles, but, if they occur, try to run the software holding down the SHIFT key. The RESETWM call will disable the hard drive then.

Some programs, especially non-DOS games (like the GOONIES, for example), have their-own serial routines to load data from the disk. Such software usually do not support PBI devices, so it will be impossible to run from the hard drive (see section VI.).

XI. Future extensions

Although we are thinking our work has been finished for now (because all our plans became reality), looking to the future we are providing to implement some addtional features. They can be divided in two separated sections:

1) software extensions (based on the same Interface's hardware)

a) More partitions. Though the OS provides 16 as maximum number of physical units for each SIO device, the hard drive is not a SIO device and there's no necessity to send a device identifier (DDEVIC) and a device's number (DUNIT) together as one CDEVIC value. So, DOSes would be able to access partitions higher than 15 just with a number of partition stored directly to the DUNIT byte (DDEVIC = �3x, DUNIT = �20 --> partition 32). For now, only

one (the sixteenth) partition can be used in this manner, but
generally there's no objection to address up to 256 partitions.
The only limitation is the partition table's size. Due to limited
space, the Interface will probably never handle more partitions,
than 26 (A: - Z:).

b) Larger devices. There's no objection to use a 32-bit absolute
sector addressing. It wouldn't make partitions larger, but you
would have more 8 GB partitions at the same drive ('only' 1 at
the moment). The 32-bit absolute sector addressing should be
enough for everyone, as even newest EIDE devices have only 20
bits to select a logical sector number...

c) Larger allocation units (clusters). Will be implemented, if
necessary.

d) Faster transfers. They may be reached by the software
improvement in two ways:

- LBA mode. Newest EIDE devices have the LBA (Logical Block
Addressing) mode - there's no necessity to calculate a cylinder,
head and sector number from a logical sector address. The
Interface's arithmetical routines are very fast, but no routine
is always faster, than a fast routine...

- 816 mode. The Interface's software may use separated 65c816
routines to do things faster, but it would require '816-oriented
operating system (interrupts!).

2) Hardware improvements

a) DMA transfers. We are working on it.

32. Who wrote Preppie?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-02 00:00:00 UTC
From: 71333.2241@compuserve.com
Message-ID: <4cc6ck$na1@dub-news-svc-6.compuserve.com>
Source record: 86611

Can anyone out there remind me the name of the guy that wrote Preppie
and Preppie 2. He also wrote a really neat Scramble type game with a
submarine and the name of that escapes me too..

A friend and I were both Atari 800 programmers 10 years ago and we got
reminiscing, and the answer to this one has been driving us crazy.
All we can remember is it is Russ something.

Thanks in advance

--Steve

I am VERY reluctant to start anything here but I'll try:

> I turn it on and the power light comes on, but no drive movement occurs
> and
> the drive is not accessible from the atari.

I assume that this means that the Head does not 'Seek' AND
that the drive motor does not come on.

> drive assembly/mechanism works fine when placed in the good drive. Also
> the problem is not in one of the two chips that come with the ICD
> doubler
> package - I swapped these between the two drives and they work ok.

Are the jumpers on both PCA's set the same? Assuming that both
ROM's are ICD USD EPROMs, the jumpers should be: J2; J4; J5; J7.

>
> Are there certain test points on the board that I can probe...would I
> need
> a logic analyzer or 'scope?
>
Yes and no. Have you reseated all the socketed chips? Just work
a small screwdriver or tweezers under them and lift them a little bit and push them
all back into place.
What it sounds like is that the 6507 is not running. In the past what
I have found is things like a constant RST (Reset - Clear) for one reason or
another. If the 6810 RAM is bad it can cause the same problem. Bad Clock
signal. Oh yes, the 12 Volt regulator or the diodes in the Voltage Doubler
curcuit.
You see, if it isn't one of the main chips that are socketed, you
need to use a O'Scope and a schematic and probe around. Not Test Points,
but on certain pins as shown on the schematics. A little bit of a 'Witch Hunt'.
I believe American TechnaVision sells, or used to sell a complete
set of the main socketed chips for about $5 to $10, excluding the ROM. Don't
know if they still carry it or not.

I hope this helps, Rich Mier

I really should not expect people to actually read that users manual
I wrote I guess :)

There is a command like switch for registered users like yourself to BYPASS
THE STARTUP SCREEN. Try APE /? to see a listing of command line options if
the manual is not an option ;)

Steve 'I think i made the users manual too complete' Tucker

35. FS: Atari stuff (UPDATE)

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-02 00:00:00 UTC
From: Ant <ant@titan.fullerton.edu>
Message-ID: <Pine.SOL.3.91.960102153044.29031B@titan>
Source record: 86614

I'd just like to let all those who sent me email on the misc Atari hardware and unlisted software I have for sale that I did receive your email, and am reviewing my many options.

To those who requested a list of software - perhaps I did not make this clear in my first message. There are literally HUNDREDS, if not over a thousand disks here. I'm not about to spend all day typing out a list, or all week testing to see what actually works. Sorry, but I think you can understand my reluctance.

Also, to anyone who offered me less money for an item than it would cost to mail it, please try again. It may be cheap, but it isn't free! :D

Also, please do not offer less for the Atari 1040ST than an Atari 1200xl is worth. I could sell the Atari monitor alone to an Amiga owner for at least $50.

More responces are welcome. Here is the list again for anyone who missed it:

```
Qty Description
-----------------------------------------------------------------
3 Disk Drive 810
1 Disk Drive: Percom Data w/ PS
4 Disk Drive: 1050
10 Power Supplies for disk drives, dattasettes, and Atari 800's
2 TV/Game Switch boxes
17 Data cables
3 Parallel printer interface
2 Video to TV converters
2 Video to monitor cables
2 RCA cables for TV
1 16k memory module for 800
3 Datasette 1010
2 Computer power supplies
4 Atari 800 computers
2 Daisywheel printer 1027
1 Atari 800XL computer
3 Atari 850 serial interface
1 Atari 600XL computer
2 Atari 1200XL computer
1 Indus GT disk drive
2 Atari 410 datasettes with p/s and data cable
1 Modem 1030 w/ p/s
2 Hayes smartmodem power supplies (no modem though)
```

1 Atari 1040ST complete system (computer, disk drive, mouse, MONITOR,
cables, and software.)

And then there are mounds of disks, catridges, and manuals. Most is for
the 8bit systems, but there is a box full of Atari ST software too.

: Yes, I'm a MyDOS man. I use SpartaDOS because I have to use it for PabQWK.
: I never liked SpartaDOS before I used it. Now that I do use it, I HATE it.

Ouch! But there is power in them there sector maps! Note and Point were a
royal pain in the butt in Atari/Mydos. Sector/Offset Yuk! It can also be
said that MYDOS and ATARI DOS do not count bytes used to maintain the
file information as belonging to the file. That is, the bytes in the
directory listing itself.

It is a simple matter to determine the number of sectors in a sector map.
At most there are (reported file bytes)/(bytes per sector)/(126 DD or
62 SD). There may be less if it is a SPARSE file.

Ah now there is something that neither Atari or Mydos have. Sparse file
allocation. If you point way past the end of a file and write. The
reported filesize goes up as if it were zero padded all the way there!
But in reality, the sector maps are maintained with 0 entries meaning,
pseudo empty sector. Saving Lots of REAL disk space.

Well I'm glad you like QWK anyhow. To bad the complexity of Sparta is
such a bear. Writing a utility to truncate files doesn't sound that bad.

:
: please help..thanks

Sounds to me like your boot sectors got hit hard! If you know some simple
info about your drive, I can definately help ya.

First, what kind of setup are you running? Black Box/MIO/KP/BLT ?

That's just for curiousity actually..

Ok, now the bad news. There are no truely wonderful recovery programs.

However, We can fix this disk right up.

If:

You know how many sectors the drive has partition has
(from MIO/Black Box menu)

And you know that Cleanup didn't trash your disk even further.

And you are willing to do a tiny bit of sector editing with Disk Rx

Then:
On sector 1 of the partition in question:
Starting from Byte 0 -> Byte 127

Byte 9 and 10 (ie the 10th and 11th entries in the sector map) are
the Number of the sector which Maps the MAIN Directory.

It's my theory that atleast these bytes are messed up, probably more.

To find out that sector number:

Divide the number of sectors on the partition by 8.

This gives you the number of bytes needed to flag free sectors
in the bit map sectors which will directly follow the boot sectors
on your Hard Drive.

So now, Divide the number from above by your sector size (256).

Now you know how many Bit Map Sectors Sparta Dos needed to
flag free sectors.

Byte 15: (ie the 16th entry in the sector map) contains this number.
If it doesn't. Put it there now! (If you have to use the evil
Disk Rx Documentation do so now.)

Assuming that you had no bad sectors from sector 4 -> 4+ that number above.
Sector 4 is the starting position of these Bit Map Sectors we just counted.

Bytes 16 and 17 hold this number (17th and 18th position in the sector map)
(17th position gets the 4, 18th gets a 0. Ie low byte, high byte.

Now 4+ the number of Bit Map Sectors, should be, the place where
Sparta Dos originally placed your Main Directory.

We will now put that number in bytes 9 and 10 (entries 10 and 11)
(the 10th entry gets the number, the 11th gets a 0)
(thats because at most there are 32 sectors defining 65536 sector flags)
(and 4 + 32 = 36, which is less than 256 and therefore the low byte.)
(the high byte is a zero, since the number isn't greater than 255)

Ok, Byte 31: (ie 32nd entry in sector) should be 0. Indicating 256 byte
sectors.

Bytes 13 and 14 (the 14th and 15th entries) get the number of sectors
on the disk. So divide the number of sectors by 256. Put that number
in the 15th entry. Subtract from the number of sectors, the number
we just put in the 15th entry * 256. And place this new number
(which mathematicians call a modulus or remainder) into the 14th entry.

OK! Now you should be able to exit DISK RX and DIR Dx: the damaged
drive. If not, sorry I tried my best.

Bill

I found a copy of this game for the MS-DOS machines on the bargain racks for $5 the other day, so I picked up a copy. Having spent the last few days being driven up the wall (do you need to build a model to map this thing properly?), I remembered that Atari put this thing out as an XEGS catridge.

Has anyone played the Airball cartridge, and if so, what did you think of it? I seem to remember it having a nice sandstone-y look to it which, while not as bright as the VGA graphics, looked quite groovy. Also, playing Airball with a CX40 (or trackball!) would have to be less aggrivating than either keyboard or PC joystick controls, and the sound would HAVE to be better.

Also, about what are B&C, American Techna-Vision, TOAD, etc., currently asking for one? And just what are the cross and candle for?

Actually, under MSDOS, only the root directory has a limit of 512
files, subdirectories can have an unlimited number of files in them
(well, limited to how much disk space you have!!).

>These cords have a male and female 9-pin connection
>on either end and are 16 feet in length.

>$7 for one or $12 for two, shipping included

Once can also use any Sega Genesis extension cables, and with a little
creativity hook up most remote control Genesis controllers...

Genesis controllers work fine also, the B button fires..

49. Atari 8-Bit Computers: Frequently Asked Questions

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-03 00:00:00 UTC
From: faqserv@athena.mit.edu
Message-ID: <atari-8-bit/faq_820653530@rtfm.mit.edu>

This file may be reproduced, in whole or in part, so long as the content of
that portion reproduced is not modified, and so long as credit is given to
this FAQ list or its Maintainer, or the author of that section reproduced
when given.

The Atari 8-Bit Computers Frequently Asked Questions List was created to
provide answers to many commonly asked questions found in the Internet's
comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group. It is in
a constant state of development, and comes with no guarantees. If you
see any problems, I need to hear from you!

--- Where to get the latest copy of the 8-bit Atari FAQ List ---

The home of many FTP archive sites, automatically updated monthly:
URL:ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/faq

The World Wide Web hypertext version, automatically generated monthly:
URL:http://www.smartpages.com/faqs/atari-8-bit/faq/faq.html
URL:http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/faq/faq.html

WWW "flat hypertext" versions, automatically generated monthly:
URL:http://www.cs.ruu.nl/wais/html/na-dir/atari-8-bit/faq.html
URL:http://www.lib.ox.ac.uk/internet/news/faq/archive/atari-8-bit.faq.html

Usenet newsgroups where this FAQ list is automatically posted monthly:
URL:news:comp.sys.atari.8bit URL:news:comp.answers URL:news:news.answers

You can also get the latest version by e-mail.
URL:mailto:mail-server@rtfm.mit.edu , message says:
send usenet/news.answers/atari-8-bit/faq
```

quit

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Subject: 0.1) Table of contents

0.1) Table of contents

Introduction
1.1) What is an Atari 8-bit computer?

Usenet
2.1) What is comp.sys.atari.8bit?
2.2) What is comp.sys.atari.announce?
2.3) What is comp.sys.atari.advocacy?
2.4) What is comp.sys.atari.programmer?
2.5) What is comp.emulators.misc?
2.6) What is comp.emulators.announce?

E-Mail
3.1) What is the Info-Atari8 Digest?
3.2) What is INFO-A8?
3.3) How can I retrieve files from FTP sites by e-mail?
3.4) How can I post to Usenet newsgroups by e-mail?
3.5) How can I access the World Wide Web by e-mail?

Software Archives
4.1) What is the University of Michigan Archive?
4.2) What is the Boston Archive?
4.3) What is the PVV Archive?
4.4) What is the ClarkNet Archive?
4.5) What is the Gatekeeper's Archive?
4.6) What is the QACE Archive?

Telnet
5.1) What is the Cleveland Free-Net Atari SIG?
5.2) What is the Youngstown Free-Net Atari SIG?
5.3) What is the National Capital Free-Net Atari Users SIG?
5.4) What is the Victoria Free-Net Atari Computer Users SIG?
5.5) What is the Closer To Home BBS?
5.6) How can I access the World Wide Web by Telnet?

World Wide Web
7.1) What WWW pages support the 8-bit Atari?

IRC
7.9) What IRC channels discuss the 8-bit Atari?

Online Magazines
8.1) What is the CAIN Newsletter?

File Formats
9.1) What's this UUEncoding stuff (.uu, .uue files) all about?
9.2) What is an .arc file?
9.3) Okay, how about a .dcm file?
9.4) What is an .xmo file?

Emulation
10.1) What 8-bit Atari emulators exist for other computing platforms?

File Transfer Solutions
11.1) What are the best terminal emulators available?
11.2) Can I read/write 8-bit Atari disks on an IBM-PC?
11.3) Can I read/write MS-DOS disks on an 8-bit Atari?
11.4) How do I transfer files using a null modem cable?

Storage Media
12.1) What 5.25" floppy disk drives are available?
12.2) How can I use 3.5" floppy disks with my 8-bit Atari?
12.3) What do I need to connect a hard drive to my 8-bit Atari?
12.4) How can I use an IBM-PC as a storage device for my Atari?

General Interest
13.1) What's the best DOS for the Atari?
13.2) What hardware has Atari created in the 8-bit computer line?
13.3) What are the power-supply requirements for my Atari components?
13.4) What are the pinouts for the...?
13.5) What BBS software can be used on the Atari?
13.6) What version of Atari BASIC do I have?
13.7) What are the Standards for Used 8-Bit Stuff?

Other Documents of Interest
14.1) What vendors, developers, or publishers support the 8-bit Atari?
14.2) Where is my nearest 8-bit Atari BBS?
14.3) Where is my nearest 8-bit Atari user group?
14.4) How do I use my new or emulated Atari?
14.5) What prominent Atarians are reachable by e-mail?

Subject: 1.1) What is an Atari 8-bit computer?

In order of their release, the Atari 8-bit computers include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System. The 400/800 models were first shown publicly in November 1978 and first sold in 1979. The final machine, the XE Game System, was released in 1987. Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM,

ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

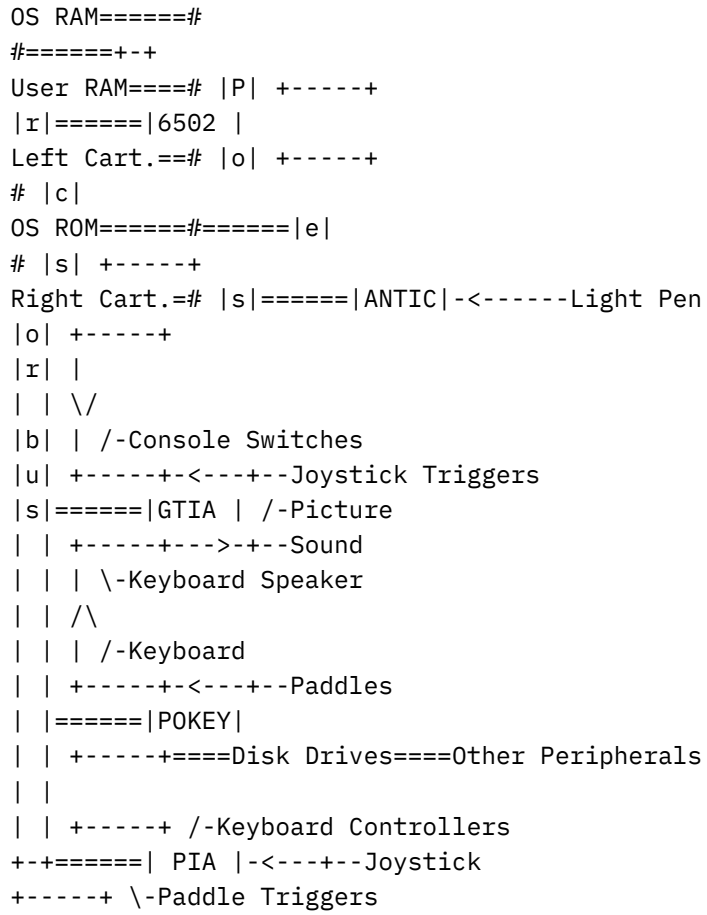
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexor. According to URL:mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is

beyond me. An 800XL can look like a 130XE with that 16-pin chip installed
(That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement



Beginners at using the 8-bit Atari platform may wish to contact Bill
Kendrick, URL:mailto:kendrick@sonoma.edu , for his Newbie/Emulator FAQ.

The following is taken from Bill's Newbie/Emulator FAQ.
Graphics:
The Atari has maximum resolution of 320 x 192 (standard, non-overscanned
screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4,
160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also
supported. 40 x 24 x 256-character (128 normal, 128 inverse, character
set indirection available) text mode is standard (2 colors).
40 x 24 x 128-multi-colored-character (4 colors per character allowed,
the other 128 characters have 4th changed into a color 5) and
40 x 12 x 128-multi-colored-character screen modes are available.
GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only,
and 80 x 192 x 9 color screen modes.
Graphics Modes Summarized:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text

2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen
modes are available.
Screen modes can be mixed (by lines) down the screen using the Display
List (a program which is executed by the ANTIC graphics chip every
screen refresh (60 times per second on real NTSC Ataris).
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.
All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

According to Doug Neubauer (by way of URL:mailto:finneganj@delphi.com (James
Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator
A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design

Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

[I'd like more system spec's here.]

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through URL:news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

URL:news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from URL:mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

URL:news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

URL:news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

URL:news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

URL:news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at URL:mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

URL:mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd,
URL:mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this
discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
URL:mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in
the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach
comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command
to LISTSERV@MARIST, or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please
note that this command must NOT be sent to INFO-A8@MARIST or to
info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX
INFO-A8" command to LISTSERV@MARIST or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "index info-a8". These files can
then be retrieved by means of a "GET INFO-A8 filetype" command, or by
using the database search facilities of LISTSERV. Send an "INFO DATABASE"
command for more information on the latter.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
URL:mailto:ravi@mcnc.org (Ravi Subrahmanyan)
URL:mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Merit/Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd /afs/umich.edu/group/itd/archive/atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin.

Mail the text of your post to:

```
group.name@news.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@bull.com
group.name@cass.ma02.bull.com
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name.usenet@canaima.Berkeley.EDU
group.name-news@newsbase.cs.yale.edu
```

For example, to post to comp.sys.atari.8bit, you might send your message to:

comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Be sure to include an appropriate Subject: line, and include your real name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com (Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to mailto:listserv@info.cern.ch (older address) containing the following single line. (What you put on the subject line doesn't matter; blank is OK. This line should go in the text of the message.) You will receive as a reply a simple page intended to help you learn more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of files for many computing platforms, including the Atari 8-bit computers. For more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich Archive. The Archivists request you use these mechanisms in this order of preference:

1) The number one way to get into the UMich archives is via AFS. If you have AFS, all our files are kept in the directory "/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT! Specifically, use:

URL:file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software Archives" choice. Specifically, use:

URL:gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
URL:gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
URL:gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
URL:gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

URL:http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
URL:http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

URL:ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
URL:ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
URL:ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
URL:ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
URL:ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
URL:ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
URL:ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts

usually don't arrive in the proper sequence. Also, please include a message labeled "file transmission," containing a short description of the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to have seen no uploads for years, but there are some files here that aren't on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by Eyvind Bernhardsen, mailto:eyvind@lise.unit.no . PVV stands for ProgramVareVerstedet, or The Software Workshop, a student society at the University of Trondheim, Norway.

ftp://nova.pvv.unit.no/pub/Atari/8bit (129.241.36.207)

Uploads go to ftp://nova.pvv.unit.no/incoming/atari/8bit; Eyvind moves them to the appropriate directory. Please include a .readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson, mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock: ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, URL:mailto:sup8pdct@closer.brisnet.org.au for more info.

URL:ftp://203.4.149.98/8bit

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National Public Telecomputing Network. It can be accessed by any of the following: telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are automatically members of the official Atari user group C.A.I.N. - Central Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari Community E-Mail Directory" listing. Send correspondence and press releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the Youngstown Free-Net Atari SIG?

Youngstown Free-Net (Youngstown, Ohio USA)
telnet://visitor@yfn.ysu.edu (192.55.234.27)

Type "go atari" to reach the Atari SIG. Write to mailto:xx140@yfn.ysu.edu for more information.

Subject: 5.3) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.4) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.5) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.6) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

8-bit Vendor/Developer home pages are listed in the Vendor/Developer list, not
here.

Atari 8-Bit Computers FAQ and Vendor/Developer Lists

Subject: 7.9) What IRC channels discuss the 8-bit Atari?

#Atari8 - Just for 8-bit Atari users!

#classic - Classic Games and Systems Collectors.

Subject: 8.1) What is the CAIN Newsletter?

The Central Atari Information Network Newsletter is the monthly online magazine of the Cleveland Free-Net Atari SIG. The editor is Mark Leair of the Atari SIG. 8-bit computers support is provided by Michael Current and Craig Lisowski. For information, write to the Atari SIG at mailto:xx004@cleveland.freenet.edu .

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into 100% printable ASCII characters, so that the file may be posted or e-mailed anywhere a text message can go. The 8-bit Atari is perfectly capable of UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that is common in the MS-DOS world. This is done to make the file shorter, so it takes up less space on your disk and it takes less time to transfer between computers. The archives contains several 8-bit Atari archivers fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert entire disk images into files. To work with .dcm files you'll need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text, but was a binary file. As a binary file, it had to be downloaded using a file transfer protocol such as XMODEM. The use of ".xmo" as a filename extender was popular once, but has been discouraged for years.

Subject: 10.1) What 8-bit Atari emulators exist for other computing platforms?

These are the four emulators that are usable.

1) ST Xformer 3.0, from Branch Always (see companion Vendor/Developer List for complete contact info). A freeware 8-bit Atari emulator for the Atari ST.
Net location?

2) PC Xformer 3.2, from Branch Always (see companion Vendor/Developer List for complete contact info). The 8-bit Atari emulator for DOS/Windows/OS/2. Versions 2.0, 2.5, 2.52 are freeware; 3.0 was the first commercial version; 3.2 is the latest commercial version; 4.0 for Windows 95 is coming soon.

The following further info on PC Xformer provided by Bill Kendrick,
mailto:kendrick@sonoma.edu . Contact him for his Newbie/Emulator FAQ.

2.0 emulates an Atari 800. It requires about 300K of
free memory, 320x200x256 (MCGA/VGA/SVGA) graphics, and a 286 CPU.
It does not support ROM files, disk image swapping within the
program, player/missile graphics collision detection, sound,
PC joystick support, modem/printer support, but is free.

2.5 is the replacement for 2.0. It emulates either an Atari 800
or an Atari 800XL. It requires about the same as 2.0. It does
support ROM files and the PC speaker is used to emulate the old
Atari 400/800 internal speaker clicks. It is also free.

3.0 is the first commercial release. It emulates an Atari 800,
800XL, or 130XE (128K RAM; I heard it was to do 320K but I think
that was reduced). It requires a 386 and 512K of memory. It
supports Sound Blaster, player/missile graphics collision detection,
modem/printer and PC joystick support. It
comes with a disk with the software, an ammendum to the printed
documents, and a bunch of Atari 8-bit software (example programs:
demos/games, and a few useful utilities). It supports disk swapping
through a (currently) simple menu.

All versions support .XFD (Xformer disk) format disk images, and
all versions of PC Xformer support SIO2PC disk images (.ATR's).

PC Xformer 3.0 comes with a 36-page printed manual and reference.
It includes appendicies explaining graphics, sounds, colors, BASIC,
subdirectory paths (for MSDOS which in turn explains SpartaDOS/MYDOS),
a quick keyboard reference, ATASCII characters (all 128 drawn out),
the Atari editor, error codes, file IO (commands, devices, XIO calls)
as well as giving breif information on how to contact other Atari
users, common file extenders, and it includes a LARGE glossary
explaining Atari BASIC / TurboBASIC XL commands, Atari computer
terms, and general computer terms.

filename: Xf2/xf25.zip

Of importance to PC Xformer users is:
DcmToDsk, freeware by Jason Duerstock. It converts most .DCM files into
SIO2PC .ATR's for use with SIO2PC and PC Xformer.
filename: Sio2pc/dcm2dsk2.zip

3) Rainbow, by Chris Liam, for the Apple Macintosh
URL:mailto:lamcw@aston.ac.uk
URL:http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari Emulator for Unix and Amiga, by David Firth
Latest version: 0.1.8
URL:mailto:david@signus.demon.co.uk
URL:ftp://ftp.demon.co.uk/pub/emulators/Atari800-0.1.8.tar.gz
(158.152.1.44)

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 0.37, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None

Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: Telecomm/ft80v037.arc

Ice-T 2.0 XE (requires 128K) or 1.1 by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.0 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.0 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.0 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
Beta-test versions of both available from mailto:bruck@brachot.jct.ac.il

---

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (280-some rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)

2. If the PC drive is a 1.2M drive there is the additional problem of the track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive, can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB, and then reformatted on a 1.2M drive to 360k, can be read reliably only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the Atari for Atari to PC transfers, format truly blank disks on the PC for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following combination of utilities can be used to work with SS/SD 90K Atari-format disks, and is currently the best bet for reading SS/ED 128K Atari-format disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read FM disks (I'm not sure what the criteria for that is), then you can read single density disks on your PC by dumping the contents to a file with AnaDisk, and then using Deana.com to convert the dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first portion of each sector, but it demonstrates that it is possible for a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050 drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be used to read/write to a hard drive connected to an MS-DOS system. This can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the companion vendor/developer list) allow the Atari XF551 disk drive to read 720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software Services (see the companion vendor/developer list), allows both low

density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard floppy drives to be used on the Atari. A utility is included to read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus),

then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C
port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o
25 14

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:

- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary; full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)

Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

Corvus ? 10 megabytes Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare
Supra/K-P N/A various Some limitations on drive type and size and total number of drives in sys.
FTe Multi I/O various 256 byter per sector restriction. 256K and 1 meg ramdisk models. Printer and modem, modem will handle 19.2K bps
CSS Black Box various Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the only modem interface with CTS/RTS hardware flow control. 19.2K ready.
SWP ATR-8000 unknown limits Rare daughterboard for hard drives. I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE/AT-BUS hard disk (still under construction)

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson, mailto:d.paterson2@genie.geis.com

SIO2PC is a cable and software combination that lets you use your PC as up to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to 16 megs. SIO2PC also lets you redirect the printer output to your PC printer or to a file on the PC. High speed drives are emulated (a la US Doubler).

All these functions are transparent at the Atari end; you never notice the difference between SIO2PC and regular drives, except that the SIO2PC drives are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 3.19i is shareware by Nick Kennedy.
filename: Sio2pc/sio319i.exe

Of importance to SIO2PC users is:
DcmToDsk, freeware by Jason Duerstock. It converts most .DCM files into SIO2PC .ATR's for use with SIO2PC and PC Xformer.
filename: Sio2pc/dcm2dsk2.zip

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8-16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8-48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16-64K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige &
black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card

XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial
programs. I haven't heard anything about OASIS IV and CARINA for a while,
but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals & accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/vendev/faq.html

55. Old Scott Adams titles?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-03 00:00:00 UTC
From: followel@cris.com
Message-ID: <30e95526.6714555@news.cris.com>
Source record: 86630

I've been trying to get my hands on some old Adventure
International titles. I'd be willing to purchase them, but, can't seem
to find anyone who sells them. I've tried all the Atari 8 bit houses
and resellers (that I know of) and still haven't had any luck.
I'm not sure if these are still commercial or not or who owns
the rights. I'd heard that they'd been entered into the public domain
(at least Adventureland and Pirate Adventure have). Anyway, i've got
Atari (& PC) versions of the original 12 text adventures (in .xfd
format too!). I'd be willing to trade for some of the one's I'm
missing. I'd love to get the S.A.G.A. adventures (graphic versions of
the original 12), Buckaroo Banzai, Sorcerer of Claymorgue Castle,
Saigon The Final Days, any of the three QuestProbe adventures (Hulk,
Spiderman or Fantastic Four), Stone of Sisyphus, or any others I'm
forgetting.
I'd also be interested in PC or Apple][versions of the above
mentioned titles.
Also, does anyone remember how to turn off the terrible script
text and revert to the Atari character set in the original 12 text
adventures? I seem to remember there being a way to do this, but can't
remember how. Thanks for any help.
If anyone knows where I may be able to purchase these, then,
by all means, fill me in. Otherwise, I'd be willing to trade to get my
collection completed.

Sincerely,
- Byron Followell

I would assume you can just look in the executable file for a refrence to
the CHBASE register. Something like STA $2F4 (756). Its the MSB
of the new character set.

Just comment this command out with NOP's ($EA).

Steve

60. What happened to Adv. Int'l?

Whatever happened to Scott Adams and Adventure International? As everyone here knows, they wrote a series of excellent games (text adventure, arcade, etc) for a variety of machines back in the late 70s/early 80s, and then seemed to disappear off the face of the planet.

What happened to these guys? Where's Scott Adams?

Thanks,
Scott

: worth. I could sell the Atari monitor alone to an Amiga owner for at
: least $50.
[...snip...]
: 1 Atari 1040ST complete system (computer, disk drive, mouse, MONITOR,
: cables, and software.)

Hmm, I guess I must have gotten a good deal the other week when I
bought a 1040ST complete system (computer, disk drive, mouse, SC1224 Monitor,
cables, basic software, and "Rainbow" TOS 1.4) for a grand total of $50.
The ST is a fun secondary system, but its a real pain in the ass
when you only have 1 floppy drive and want to download. No real way to swap
floppies, so one has to setup a ramdisk.
Anyways, to stay somewhat on this groups topic: Does anyone have
any experience with 8bit emulators or Cross compilers/assemblers for the ST?
Seems as if all the focus as of late is on 80x86 8bit goodies.

Russ Wetmore, also the author of the excellent HomePack(sp), a combined word processor/spreadsheet/comm program. Russ, if you're out there, thanks!

I can't explain why I remembered this. Maybe it has something to do with the fact I've been through countless STs and PCs, yet my XE is nestled in it's original box not 15 feet away.

69. Re: HD interface for 800?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-03 00:00:00 UTC
From: rsalerno@linet01.li.net
Message-ID: <4cenkv$2n0@linet02.li.net>
Source record: 86644

Rick, thanks for the reply. I'm considering an SIO2PC-based setup, but I'm not crazy about the idea about having another entire PC hooked up to the 800 - desktop real estate y'know (coffee table real estate <g>?). On the other hand, it appears to be a popular solution which means support and help would be more readily available compared to a roll-your-own project.

However, the idea of a compact (possibly crammed into the 800's case?), dedicated HD is appealing to me. I can get a ~150mb 3.5" IDE or SCSI drive fairly cheaply, which is big enough to contain *ten* copies of every Atari program I have.

So let me ask: What is an MIO and what is a Black Box? Does this setup work with an 800? (NOT an 800XL). How does it integrate into the the Atari OS (patch? MyDOS upgrade? etc...), and do the OS changes needed to access the HD affect compatibility in any way?

Thanks,
Russ rsalerno@li.net

PS Tried to email you but got a message saying your account was suspended?!?!

> Russ; it is still pretty much roll your own, unless you want to part with

Thanks for offering the help, but, I'm not looking for any kind of hack. There was a special command or keystroke that would disable the script character set and that is what I'm looking for. Thanks again.

Sincerely,
- Byron Followell

>remember where I downloaded it from. Is there a new version out there?

Try:
ftp://ftp.cs.dartmouth.edu/pub/crow/Atari/

Unfortunately, the program isn't completed--it doesn't set up the boot
sectors or sector bitmaps correctly, so don't try to boot from the
image or write to it. Other than that, it should work fine if you're
using MyDos.

: Box, or a MIO or an IDE interface. Also, it would require lots of driver
: software to support the ISO-9660 file format, and the 2048 sector size,
: although that could be set to 512. None of these drivers currently

That'd be cool (setting the sector size to 512 or even 256 or 128, if
possible!)

<snip>

: 100 users. Who is willing to write a driver for 100 users nowadays?
: On the other hand, if one of those 100 actually does write a driver,
: more users will want a CD-rom drive. Now that these CD's exist, it is

Exactly. :) Cool.

: only a matter of time before these drivers are written. Depending on
: these drivers, it might make more sense to write CD's for the 8bit in a
: different format. For now, the ATR format appearantly is preferred over

Well, APE has DCM->ATR conversion built-in, so SIO2PC users are happy.
PC Xformer, Rainbow, and Atari800 are all "in-progress" programs, so it's
not like there's NO CHANCE for support of DCM or some other new format...

<snip>

: Writing a CD with files in DCM format is only useful for use on a BBS.
: We never said the CD was BBS-ready, although I believe there is a program
: that allows the 8bit to download an XFD file directly from the modem to
: a floppy disk. But even if the CD would have been made BBS-ready,

(This program should be hacked to support ATR!!! :))

: most of the files should not be in a disk image, but should be on the CD
: as individual files, not in DCM files. Only bootable games

Again. Here's were APE is the best of the disk-image-using bunch. PC Xformer
and Rainbow allow "one at a time" file insertion into the emulator. Of
course, getting "Unix2Atr" (does it exist?) could help somewhat, but the

"PC Mirror" mode that APE adds which nothing else (except "Atari800" with its "H:" device allowing access to a Unix directory) is what the other programs NEED!

<snip>

Take care. I'll have to check this CD out myself some day soon. :)

Any extensive list of "what's on the CD" out there?

I also sent in a request at least a month ago, to upgrade to version
3.3. I bought version 3.2 right after it was released, and sent in a
registration card a couple weeks before requesting the upgrade. I've
been a little disappointed with the response time, and would rather
see time being spent on getting the overdue 4.0 (W95 version) finished
instead of upgrading 3.x.

Well, you got me curious enough to dig out the instruction sheet for my original cassette of Adventureland (wow, that's old!)... The command is to this "A" for the regular Atari character set, and "B" for the "Adventure Script", as they call it. I seem to recall that it gives you the blue background, too, which isn't real attractive, IMHO.

For what it's worth, AI officially described Adventureland as a "Compu-novel". :)

I've got about half of the adventures, I wouldn't mind completing the collection some day...

>wish to incur the almighty wrath of the SPA (yuk). I would appreciate any
>>insight. Thanks.

No such thing as a statute of limitation on copyright. Basic copyrights last 50 years at the barest minimum, no danger of Atari-related copyrights expiring soon.

As far as I know AR: The City is still protected by copyright. Who owns the copyright at this point is not clear. Datasoft may have disappeared, but I thought it was bought-out by someone else (could it have been EA?). If so, the rights to AR could have been transferred as well. Even if Datasoft did go out of business all by itself, the rights to their software wouldn't necessarily revert back to the author(s); that would depend on the initial agreement between the author and the publisher. My speculation is that in most cases such arrangements were not in place, but only the authors and the publishers really know.

People generally don't frown on replacing damaged disks with copied ones; if you've bought the product, you're permitted to make yourself a backup copy anyway. If you get copy from elsewhere and copy it back onto an original disk, it's as good as new.

Getting copies of software that you never bought in the first place for use on an emulator is another matter entirely. This is one of the reasons I don't get excited by the emulators: they've created a whole new market for the pirate software distributors to exploit.

Also, please note that the title in question, Alternate Reality: The City, is still sold, new, in box, by American Techna-Vision, (510) 352-3787.

I have a nice Atari 800XL, with a cassette drive and two games, Legionaire and Andromeda Conquest. The computer works fine. I hardly ever used it. Looks like brand new. I haven't tested the cassette drive in a long time, but I believe it works ok.

I still have the original box for the computer, and I believe the manual. All cables, power supply, TV adapter included.

If anyone is interested, please make an offer.

Thanks,

Michael

Well I have been cleaning up my old garage (I have moved up to the silicon valley and I am about to rent out my home), and I found old contracts on AR with Paradise Programming(Gary Gilbertson and I) and Datasoft. The contract of course only included city and Dungeon since no one but myself had rights to the other sequels. The contract stated that after ten years all rights reverted back to us(there was even a clause that said it would revert back sooner if they stopped producing the game). So at present Datasoft and it's successor (ie. Software Toolworks) have no claim on the products anymore:). Glad I cleaned up my garage.

> Well. Clearly, some distributor needs to talk with Messrs. Price and
>Gilbertson.

No, copies that Datasoft sold when it held the copyright are still
just as legal to sell as they ever were, which is the case of those
businesses still selling copies. It's just like if I decided to sell
my copy of AR. Now producing and selling new copies would require
permission from Paradise Programming.

More interestingly, is Paradise Programming interested in doing
anything with the copyright, such as making the programs freely
distributable or shareware?

Agreed. It goes without saying that the copies that were produced while the contract was in force can still be sold(ie. A person can sell a Model T ford even if Ford no longer sells it). On the otherhand, Datasoft and it's sucessor can no longer sell it. But if someone has bought a copy they are free to do with it what they will just as any consumer can with any product.

-Phil

P.S.
Plus as I have said before, in regards to the existing product, if you can't find a person to sell it to you or you need to run it on the transformer, then do what you have to do ;).

>stuff for his own use and that's why some programs turn out
>that way, but I suspect there's more to it.)

I'd say that most of the stuff I've released, was stuff for BBS Express! Professional (TM of K-Products). Since that particular bbs would only run on disk-based sparta dos, that kind of narrowed down the field as to which dos I had to write for. As far as non-bbs programs goes, an example would be my archive maintenance program. It makes use of my sparta shell, which adds some enhancements to the disk based sparta dos, such as a user defined PATH. All the ARCM has to do is to pass "ARC outfile.arc inmask.ext" via the parameter block inside of sparta, and away it goes. It (the shell) searches the logged directory first, followed by up to three other search paths. The entire basic design is only made possible by sparta's parameter passing ability, which is universal across many different versions of the dos. I use this archive maintence program to make sure that my (source) archives are kept up to date.

This is just an example of why I usually write sparta only programs. It is because I make use of the many internal tools that sparta provides a programmer. There is even a VPRINT command inside sparta, so that you'd never have to code another print command. There is also an undocumented INPUT command, which places the user's input into INBUF.

Sometimes it's also because of the free memory issue. X32gx.dos gives me alot of free memory, and has a built in command processor. This makes it easier to debug programs without having a dup.sys or external command processor clobber your code.

Everyone has their dos of preference. I know <alot> of people here prefer MyDos, TopDos, SmartDos, etc. I suppose there are a few that might even hate sparta. All I can say is, if your dos does what you need it to do, then that's alright by me.

BTW. I just released a program that should run on any dos. It's written in cc65 (best darn C compiler for any 8 bit), assembled at $2800, and doesn't make use of any sparta specific stuff. It's called RC4.ARC, and can be downloaded from my bbs. It uses the rc4 routines published by RSA Data Security, Inc., the premier company in the encryption field. Source code included (portions copyright by the afore said company),

and ready to export because it comes with the 40-bit e-key export limitation.
U.S. and Canadian citizens can recompile it for e-keys larger than 40-bits.
It's kind of a fun-toy to play with. And to think.... one of the most
respected encryption algorithms in the world will run on your 8-bit!

Just felt I should say that I think that AR City and Dungeon are about the most atmospheric games I have ever played. If Phil
wrote sequels (were there supposed to be seven originally?), then I would buy the system they ran on just to play them!!
So would several other people I know!

Phil....Please do it!!!!!

Also, does anyone know about the sequels?

There is a long time running ATARI 8-bit BBS in the Toronto Area
called "The (Toronto) Jail BBS" (I think that is the name of it). It
runs the BBS EXPRESS-PRO! BBS package. Can someone provide the number?
Also, the Toronto ATARI Federation (a.k.a. TAF), maintains a presence
on the "ATARI" FidoNET international echomail message base. If you can
hook up with FidoNET, you should be able to contact the local TAF user
group in the Toronto, Canada, area.

SC> How do I do this?

You can use a software generated 80-column terminal program.
Several of the more popular ones are:

KERMIT-65 has 300 baud and 1200 baud and does complete VT100.
OmniComm has 300 baud and 1200 baud and simple XMODEM.
TERM-80 does 80-columns with an SX212 modem using, onscreen menus.
TERM-80 v2.0 uses Black Box.
ICE-T does 300 baud to about 9600 baud VT100 emulation.
FlickerTerm80 does any modem speed via persistence of vision trick.

105. How to set/unset COMMAND line?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-06 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <DKr4tL.3Bq@freenet.carleton.ca>
Source record: 86680

How can I manually set and unset the command line without going through some SIO routine? Its seems its should be a bit in the Dxxx range, but my Mapping the Atari says nothing about it! :(

It does however document the clock in/out lines. Are these actually hooked up inside the unit and useable, or driven to ground?

Thanks

Steve

Also note that the software generated 80-column displays are next impossible to read on a regular TV screen -- the character set is small and tends to smudge/overlap into other characters. Your best bet is to view it on a monochrome monitor.

The XEP-80 is a good alternative. Never had much use for that, but at least the text quality is quite readable.

120. Computer Shopper Magazine

Hiya! I need your help. Our group has been trying for the last two and a half years to get our club listed in Computer Shopper's User Group/BBS lists. They were once in the magazine, now they are maintained (?) on their web page. Other Atari clubs are listed in it. Well, I've been getting a runaround from the editors and web editors about getting it done. They updated the list in November and assured me that our entry would be in it. It wasn't. Since then, I've been put on permanent hold when it comes to e-mail inquiries. I am starting to think that it is a deliberate omission because I've been so diligent with my e-mail to them. All I got previously was a bunch of lip-service.

Here's where you can help. Can you e-mail Computer Shopper and ask them why they are not including our entry? You can pretend to be a friend or aquaintance. Don't be nasty or foul. If I can get several people to e-mail them then they may just do something. Another plus would be that they would know I've made this whole bruhaha public.

The register is at $D303, store $34 to set COMMAND line low, and
$3C to set it high

>It does however document the clock in/out lines. Are these actually hooked
> up inside the unit and useable, or driven to ground?

According to the SAMS schematics for the 800XL the CLOCK IN line is
connected to pin 26 of POKEY and CLOCK OUT to pin 27, both have
4.7k pull-up resistor connected to +5v.

Subject: SpartaDOS bugs.

Report from Nelson Nieves, ATARI 8-bit/SpartaDOS Project:

To all developers of SpartaDOS 3.2x and X!

During the development of my UnErase program, I came across a few ugly facts about SpartaDOS's DELDIR and ERASE (DEL) commands.

For those of you who may not be aware of these facts I will describe them for you:

First, FTE's UnErase:

FTE's UnErase does not recover directories and has one bug that I am aware of. It reads past the end of the dir and creates a dir length error.

This is a problem. Expanding the dir can cause a free sector to be allocated to the dir. So if you wanted to recover a file or directory and that directory's or file's sector was allocated to the dir in question, tough luck.

Second, the DELDIR (RD) command:

The DELDIR command clears the directory attribute bit of a directory when you erase it. Apparently I was aware of this fact in early 1994 when I started coding TREE.COM. But I had forgotten it. Recently, after writting an e-mail message to Tom Hunt (of CTH) concerning this. I went back to look over the tree code, and clearly enough found I had documented this fact.

Also, since the DELDIR command clears the directory attribute bit, I wrote the search for directory routines to just check for the directory attribute bit. If it was set then we had a directory in use, if it wasn't set than it was probably a file or a deleted directory.

Do not assume this to be the case anymore. I have written xErase to replace SpartaDOS's internal DELDIR and ERASE commands. It will not clear attribute bits. So you must check for bit 3 or 4 to make sure the specified dir entry is in use or deleted.

If you have written a shareware or public domain program with this assumption please re-write your code and release a new version.

Third, the ERASE (DEL) command:

The ERASE command also clears attribute bits and has a bug. It seems that Erase is allocating sectors to directories without the directory needing it.

I have included an SIO2PC disk image (in ZIP format and uuencoded) with this e-mail. You can test this bug for yourself doing the following:

1) make a copy of TEST2.ATR (so that you may try again)
2) deldir TEMP>TEMP2
3) deldir TEMP
4) erase a few files (1 or 2 is enough)
5) unerase *.*

UnErase should report that a sector belonging to TEMP has been allocated to another file. Don't assume, as I did, that this is caused by UnErase expanding the directory.

Try again and this time do not use the UnErase command (step 5). Use a disk sector editor (DISKRX) and take a look in sector 5. You should see two allocated sectors to the Main directory. Then read sector 6 and calculate the length of the directory. It should be 253. It clearly doesn't need sector 7 because this is a double density disk (256 byte sector). CleanUp does not check for this type of error.

This is another reason why I decided to write my own Erase command.

Could it be that Erase is actually reading past the directory? You can't do this if you open directories for update (Aux1 = 28). If so, why isn't the byte count of the directory updated?

I will leave these questions to you all. I have to get back to work on the project. :)

The first disk should be out soon. It probably will include more than 15 programs.

The UnErase command will be a command-line program. This was caused by the huge amount of hours investigating errors such as the one's I have previously documented. I will resume work on a version 2, later on as the project advances. It will be released in the second disk. The command-line version is good for those who are, for exmaple, using 80M.COM type handlers. The windows version will not work in 80 column environments.

Also, the idea of recovering partial data to another disk is best left to DISKRX and a human operator. This feature has been scraped. "The reason?," you ask. Well, the first sector of every file and directory on disk is the sector-map. If it gets overwritten, UnErase has no way of knowing which sectors belonged to the file or which is the next sector-map in the link.

BTW, why do you think ICD was so adamant on the recovery of directories. I just don't see why recovering directories can cause errors?

```
updated 01/06/96
----------------
I have the following Atari 8-bit software and hardware for sale or
trade.

Everything is sold as is. Unless specified, all items have been
tested and are in perfect working order.

Buyer has ten (10) days to send payment, and pays all shipping
costs, which will be sent via U.S. Postal Service. The shipping
cost depends on both the weight of the package and the distance
that it is traveling. Buyer has the choice of either first class
or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order,
drawn from a U.S. bank branch. Canadian buyers must send a Canadian
Postal Money Order, payable in U.S. funds. This is the only way I
have found to deal with my friends to the north (my bank is very
picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:
---------------------
Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 6.00 Basic
$ 7.00 Eastern Front: 1941
$ 5.00 Pac-Man

Loose cartridges with manual:
$ 6.00 Star Raiders

Cartridges with box and manual:
$10.00 Eastern Front: 1941 (also includes poster map)

HARDWARE:
```

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 600XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 600XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$24.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #4

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 130XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$59.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #6

ATARI 1050 (127K) DISK DRIVE, with one (1) Molex connector cable.

This disk drive doesn't include the power supply.

$34.00

>
The Atari SH204 drive is a 20 Mb hard drive intended for use with the ST.
However, inside the case you find a host adapter, an Adaptac 4000
controller, and a 20 Mb MFM hard disk. If you pull out the host adapter,
you have a 20 Mb SCSI disk unit that can be attached to the Black Box.
I know of someone who has done this. 20 Mb is next to useless on a ST
nowadays, so these units can be had very cheap.
The megafile style hard disks usually have an integrated hostadapter/mfm
controller board, so these cannot be used.

: still around? What is the average going prices these days?
: Certainly not too expensive, I hope. <g>

: Thanks.

Hello Jack,

Some of the old Atari dealers are still around. You might check for a vendor list in a FAQ. The B & C catalog lists reconditioned 1050 drives for $135 and new for $175. Their phone is 408-986-9960 (closed Mondays). ATV was selling Atari parts and software last year to reduce their inventory. They're at 510-352-9227. And Best Electronics is still in business so far as I know. Their phone is 408-243-6950.

You might be able to find a few places that will repair your drives. ATV used to have 1050 drive mechanisms and ICs. Also try Bolt's repair service - 805-579-9954, or CSS at 716-429-5639. Hope this helps.

Steve

136. 1400XL and ATR8000 for sale(posssibly)

I have a working,with ibm ps, 1400xl upgraded to 320K, and a working ATR8000 64K that are more or less for sale. Of course that precludes offers that I don't like ;-) Everything works and is in decent condition. The 256K upgrade to the 1400xl was based on the xl line of upgrade3s (I did from a doc file somewhere) The internal 300baud modem doesn't seem to be working, but the speach synthisizer is fine. Note, this is not the 1450XLD, it has no associated drives.

Well I'm not about to type the complete manual but:

The XIO call to Binary load is:
XIO 40,#iocb,4,X,"Dn:[path]fname.ext"

If X is < 128, then the Init/Run vectors are used.
otherwise they are ignored.

Also you must be certain that iocb is closed
before this operation!

So far, so good. But HOW do I convert an .ATR (or even worse: an .XFD)
disk image to a genuine 8-bit-atari disk??? If it's so easy, please
just tell me....
I have followed this thread along the last one or two weeks, and still
I can't see how to get the progs from the CD to my good old 800. I've
got a floppy with "happy" compatible enhancement, and I'm no kind of
hardware soldering cable cowboy (I'd like to, but I've got some kind
of ten thumbs on my hands). Also I'm not familiar with programming on
a machine language platform. Is there any chance for an ignorant guy
like me to get an disk image to a real atari disk? By the way: There
is no problem for me in taking the stuff off the CD. My PC has got a
5,25"-floppy, and the program "ataridsk" works fine in transfering
files from PC to Happy-DOS-DD-disks on my atari.

I think the point is that I don't know a simple way to extract Atari
files out of .XFD and .ATR images. Wouldn't anyone out there like to
write an UNXFD program - either for the 8-bit or for the PC???

Peter

I wouldn't recommend it. Atari 5200 power supplies put out 11.5v, and I believe most 8-bit computer and peripheral power supplies I've seen (including the many I have in my basement "classics pit") are 9v. I don't happen to have any of the power supplies in front of me, but I'm sure someone will post the specific specs for them...

Bill,

I forgot where I put the piece of paper with that mail address..
Can you post this (and give me the adr again)? thanx!

Hi all,

I've kinda disappeared from the scene when my 130XE died on me, and I had
some studying, and my account closed down, blah blah blah. I'm back though,
and hopefully my subscription request for the atari8 digest went through.

I've made some progress with Ice-T. I haven't added any new features since
the released version 2 other than xon/xoff flow control, but I reworked
much of the foundation code, including data flow routines and the display
routines. The result is smoother and faster performance, with less of the
bugs and data losses at high speed that occurred with v2.0.

Before sending it out to the beta-testers though, I'd like to add some kind
of real feature, like finishing the dialling menu, maybe adding a bit of
user-friendliness to the file operations. This should take a couple of days.

In the meantime, anyone who wants to test it can mail me, and I'll mail out
working copies in about a week or so.

>wrote sequels (were there supposed to be seven originally?),
>then I would buy the system they ran on just to play them!!
>So would several other people I know!

I have played newer role-playing games, and games with a "city" theme, but AR seems to hold the cake, even with the primitive middle-'80's technology to atmosphere... I liked the whole idea of walking around a bustling city, with no "quest" necessarily in mind, other than to build up strength, etc, and being able to join guild (16 bit) was a fun thing to do too though the 16-bit PC version of AR:The City doesn't even graphically or musically/sound compare to the 8-bit AR:TC.. The Dungeon had some pretty interesting quests though..

Anyone here ever have a caracter in the contest for, what was it, "Awesome Character"??

Source record: 86574

I thought the two "Shamus" games were all right, but too frenetic for my tastes! All that non-stop shooting and running about tended to take a toll on the joystick...and my hands. <g> I also remembered liking "Necromancer" a lot, which was previously mentioned. Very dreamy graphics, sound, and music. One of the best of its day.

NO....Do not do it!

The 8 bit supplies are 9VAC while the 5200 is a DC only input!

The old 8 bits needed a -5vdc for the older style DRAM and thats why an
AC input was chosen. Makes getting -5 very easy!

The 5200 has newer technology single +5 VDC DRAM.

155. Another SIO2PC question

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-09 00:00:00 UTC
From: tbauer@saul6.u.washington.edu
Message-ID: <4csmmg$8ll@nntp5.u.washington.edu>
Source record: 86580

Hello,

In the instructions for building the SIO2PC interface, there is a comment
that the "one-chip" version offers technical advantages over the "two-chip"
version. Other than the building of the interface, what other advantages
are there? I have build the two-chip version, and it works rather
flawlessly. Why should I build the one-chip version (although I do
have the parts for it) ??
I know there are some timing differences, but I thought the difference
between the two, software wise, were insignificant . ??

Thanks,
Tom

>which chip does the select?
>

Not that i have ever seen the inside of a 65xe, But i do beleave that it has 2 ram chips.
they are the 64k bit x 4 type. If one is gone, all of memory will show up as that.
If the screen looks ok, then it is not as bad as first looks. It requires memory to display the screen
and for the 6502 stack. It could be the freddy chip or one of the ram chips.
An outside chance, it might be antic or the processor it self.

158. Re: Another SIO2PC question

: that the "one-chip" version offers technical advantages over the "two-chip"
: version. Other than the building of the interface, what other advantages
: are there?

1) Cost. One chip is cheaper. Though if your building the Max232 one chip,
your still spending too much. The 1489 version is just as good or better.

2) The two chip contain a manual tri-state that is toggled on and off by
APE. Again, this is not required in the better 1 chip designs.

: I have build the two-chip version, and it works rather flawlessly. Why
should I build the one-chip version (although I do have the parts for it) ?

You should not. If your 2 chip works fine stick with it. APE supports both
seamlessly, and if you want to use SIO2PC you just use SIO2PC2.

I had my doubts about the 1489 1 chip design in the beginning, but Rick
Cortese has made me a true beliver ;)

: I know there are some timing difference.

1/60th of a second per sio request + actual code time.

> but I thought the difference
: between the two, software wise, were insignificant . ??

The software driving the two chip has to know how properly drive the
tri-state chip. When APE is in one-chip mode it simply eliminates this
code, since its not required.

Its only insignifigant in that the end result is the same w/ both cables.

: Thanks,

Your welcome :)

Just to keep the marketplace interesting, I dug out my hardly used 1200XL.
The following is for sale:

1200XL console, unmodified, w/ p.s.
1050 FDD w/ p.s.
1020 color printer, never used
XDM 121 daisy wheel printer, never used
"ATARIMusic II", sealed
"Success with Math - Linear Equations", sealed
DataSoft "Napolean in Russia"

All of the above for $115 or vaguely reasonable offer. I need to scrounge
up a RF switchbox to verify operation of everything, but it should be OK.
I can deliver in the San Francisco Bay Area (at my convenience), otherwise
U pay shipping of your choice. *If* I can find any cartridges around they
will be included.

Keith th' Wild Chicken Tamer

:In my previous message I wrote:

>FTE's UnErase does not recover directories and has one bug that I am aware of. It
> reads past the end of the dir and creates a dir length error.

Well, actually, FTE's UnErase suffers from another very dangerous bug. If a file you unerase crosses over two bitmaps the bits corresponding to sectors in the second bitmap will not be updated (set as "in use") by UnErase.

Copy another file to this disk and SpartaDOS could allocate these sectors to the new file.

:and
>I have written xErase to replace SpartaDOS's internal DELDIR and ERASE commands.

Many of you might think that I have patched into SpartaDOS by the above unclear statement. My XErase program will replace the SpartaDOS DELDIR and ERASE commands, but only from within the SpartaDOS command-line. XErase is an external utility.

Programs, such as my DELTREE command, still call the SpartaDOS CIO to delete files and directories. This is a system wide problem. The only cure is to fix these errors in SpartaDOS 3.2 by FTE.

The XE Game System used 64K*4 chips; the original 65XE used eight 64K*1
chips. It's possible there might have been a later version that used
4-bit chips, as with the 130XE. In any case, the chips were usually all
soldered in, making them harder to replace than those in earlier Ataris.

165. File Selector v.0.3 Completed!

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-09 00:00:00 UTC
From: kendrick@cs.sonoma.edu
Message-ID: <199601100100.RAA19637@zippy.sonoma.edu>
Source record: 86590

Do you have an Atari 8-bit or emulator? Want to make getting to your programs
and documents easier? Do you use MyDOS? If you answered "yes", keep reading!

File Selector v.0.3 has been completed, adding a few new features:

Cooler screen - the top two lines are a different (user definable) color,
and have a nice colorful border
Font support - set fonts for the screen in the configuration files
ASCII Text - it now recognizes ASCII and Unix text files and displays
them accordingly
Correct path - when a program is executed, the MyDOS "current directory"
("D:") is set to the path that the file is in (so if it
looks to "D:" for any support files, it'll find them)
Better APE - APE PC Mirror subdirectories are recgonized as such

If you'd like more information or a copy of File Selector v.0.3 or have
suggestions, comments or bug reports for any version of File Selector,
please e-mail me:

kendrick@zippy.sonoma.edu

If asking for a copy, please mention if you'd like the executable ("COM")
file send alone, unARCed. I'll then send you an e-mail message containing
the documents, and a UUEncoded copy of the program file. Otherwise, I'll
send you a UUeEcoded copy of the ARC, which contains the program, the
documents, and the fully commented Action! source code.

Information and the ARC file is available on New Breed Software's home page:

http://zippy.sonoma.edu/~kendrick/nbs/

and will hopefully soon be available from the UMich archives.

I don't think anyone ever made a hand scanner for the 8-bits. Innovative
Concepts made a product called Easy Scan which used a photocell attached
to a printer's print head. I think Antic magazine had an article about
building such a device. I don't know anyone who has actually used one,
but it probably wouldn't get a very high quality image.

I am posting this message for a friend without Internet access.
If you send me e-mail, I will pass it along to him. -- Basil
------------------------------cut here-------------------------------------
ATARI ST/8-BIT

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. I will refund
your money on any disks or cartridges that do not work.

Best offer applies to all

Atari ST 3.5" software:
E-Z Track MIDI Sequencer (new, unopened) (2 of them).....$5
Personal Pascal *.....$4
ST Key *.....$4

Atari 8-bit software:
Atariwriter (cartridge) *.....$4
Home Filing Manager (disk) *.....$4
Pilot language (cartridge).....$4
Print Shop (disk) *.....$5
Telelink (cartridge).....$4
Turtle Tracks (disk).....$4

The above prices do not include shipping.

Minimum purchase is $12 worth for Atari items. The shipping cost depends on
how many items you want, if they have boxes, and how heavy they are. For
items that can be sent with the standard 2 lb. US mail book rate, shipping
is $3. For everything else, I will weigh the items and call UPS to get a
shipping cost for you. I will only ship within the continental UNITED STATES.
No exceptions.

Very few prices are set in stone. The more you buy or the more you
have to trade, the more interested I will be in making the transaction
worthwhile for both of us.

Thank you,
Randall

Message-ID: <149565@cup.portal.com>
Source record: 86597

On a related note, I discovered long ago (and posted here; God knows if this stuff is archived anywhere) that there appears to be a discrepancy between using BASIC's standard I/O statements (OPEN, CLOSE, GET, PUT, etc.) and their XIO equivalents -- but ONLY under SpartaDOS (or more specifically, SpartaDOS X, since I don't believe I've tested with "regular" SpartaDOS.

To wit, a short BASIC program that uses XIO 12 (CLOSE), XIO 3 (OPEN) and XIO whatever-it-is (GET) to open and read a file, then XIO 12 again to close it, works fine under Atari DOS but *not* under SpartaDOS X. I don't recall right now what the specific failure mode consists of, but I distinctly remember that it didn't do what it was supposed to. Gee, does anyone happen to have a copy of my posting about it? Probably from 1992 or 1993, possibly earlier... ;-)

Yes, visit your local Auto Parts store. What you are looking
for is a 'Paint' made to repair those electric window defroster grids.
It's made by Loctite and comes in a very tiny bottle, .05 fl oz. Sorry,
I can't read the part number on the one I have. It is spendy, over
$10. Of course I've used this one to repair about a half dozen key
boards now. Use Acetone (Fingernail polish remover) to keep it
thinned out over time.

A long time ago I put a program on the umich archive called Disk
Former (DISKFORM.ARC). That runs on at atari and can change and
XFD or ATR(single, 1050double or double densitiy only) file onto
a disk. Of course you have to have a Ramdisk, or drive large
enough to hold the XFD or ATR file. It will not extract files,
but once converted to a disk, then they can be copied.

I don't beleive there was ever a Atari 8Bit hand scanner. Inovative
Concepts made a scanner that connected to the print head of a printer. The
picture to be scanned had to be put in the printer and the software controled
the scanning.
The only other scanner was Computer Eyes. This received it's signal
directly from a T.V. camera or a Still Frame VCR. Could create pictures in
GR mode 7, 7.5, 8, and 9.

: I don't think any body would put a list of over 9000 files in this group.
: There are over 700 ams files to start with.

Oh why not? :)

Just do this:

List all of the major things (the titles of games/programs if they are
single images; mention that there are 700+ AMS files; mention that there
are (if there are any) disk images filled with certain things (utilities,
magazine based games)

Don't list things multiple times (ie, list only the ATRs if the XFDs are
simply duplicates)

Or just pop it in a PC CD ROM, change to that drive, and do a:

dir /s > c:\pooldisk.idx

and upload or post it somewhere :)

I am looking for an old basic program that would catalog spartados disk/
atari disks etc... you just slapped the disk into the drive and it would
pull the directory for you.

You could classify each file or disk as well as add entries by hand
and edit the entries.

it was a bit slow.. but it worked well.

Anybody know where I can find it (I looked at umich but didnt see
any disk catalogers) or better yet, where I can find a better one?

Mike,

You haven't run any of the files yet! The command you are typing just loads arcx.com into drive 1 and supgames.arc into drive 2. You still need to run arcx with whatever parameters are necessary to tell it where your arc file is. Also, if you need to load dos onto the first drive or you won't have disk access. Hope this helps.

Sincerely,
- Byron Followell

I am shortly planning on buying the "documented" version of
the 8 bit Atari emulator for PCs. But, in the mean time, I
recently downloaded the XF33DEMO.EXE program and have been playing
with that. It seems great, but I was wondering if anyone could tell
me how to unpack an .arc file. In other words, say I want to do this:

xf33demo.exe arcx.com supgames.arc

What I was hoping is that the arcx.com program would uncompress the
supgames.arc file, but it does not seem to be working, since
arcx.com has no idea of where supgames.arc are. I think I am doing
something dumb, so any advice would be welcome. Thanx....

At one time, I owned a 1200XL and a 520ST -- I loved the
machines, and I am sure I would still enjoy them if I had them... But
time has passed, and they were lost somewhere in the shuffle. So, I
celebrate when I find the Xformer for my PC, and I anticipated all the
hours of enjoyment I would have rediscovering those classic games I
owned. There is one problem: I can't find the games!
Now, if one is interested in Commodore 64 files, one only has
to use an internet search string or two, and one will come across
1000's of old programs. Atari seems to be limited to the University
of Michigan Archive, which is great, if one enjoys the shareware.
But I want to play Alley Cat, and my old copy of Donkey Kong.
I would like to play Dig Dug again... Where can these games be found?
Surely the user base is wide enough that a comprehensive
archive could be created! Hell, I would even donate my FTP site (slow
as it may be) for the cause.
If anyone can help me in locating these games, please post or,
better yet, email me at jay.trevor@swsbbs.com
Many thanks,
Jay

197. Do you need an SM-124 Mono Monitor w/ Monitor Master switch box?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-12 00:00:00 UTC
From: krieg@miller.cs.uwm.edu
Message-ID: <4d6d7v$bv6@uwm.edu>
Source record: 86472
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

I need desk space, and I don't use the mono monitor anymore since I sold
my Spectre GCR.

Here's the deal, I would like to trade my mono SM-124 monitor *with* the
hard to find Monitor Master switch box for a decent composite monitor to
attach to my Atari 8-bit. I've heard the Commodore monitors (1702?, 1902?)
are pretty good to use with the Ataris, so I'm looking for those or something
comparable.

198. atari disassembler on a unix platform?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-12 00:00:00 UTC
From: Cyrus <cyrus@lagrange.amd.com>
Message-ID: <30F6D951.77FE@lagrange.amd.com>
Source record: 86473

Hi all,

I know that there is as6502 which will assemble your atari 6502 ass'y code into machine code on the UN*X platform and I have tried it...pretty nice! BUT, is there a similar disassembler?

Lost somewhere in Texas.

Cyrus

>that this could tide me over until I found a suitable analogue stick
>(although I'd still use my Wico one), and the cash to buy it...

The Gravis is pretty popular, though I'm not real happy with mine. I just don't like the feel - and I hate that, even after the glory mid-'80s joystick days, we've come back to (usually) floppy analog sticks, and "pads" with bubble switches. Blech!

On my TurboGrafx/16, I decided that I was tired of using a gamepad, and their joystick just wasn't what I wanted. So I ended up hacking up one of my favorite Atari joysticks - a QuickShot, I think (this one had the stick, with big buttons under the trigger finger and under the thumb on top) - to work on the TG16. The joystick used microswitches all around (which I loved - outside of an arcade, you can't find a stick that uses microswitches any more, especially on the actual stick itself!), so I merely sacrificed one of my TG16 game pads. I opened up both the joystick and pad, and ran wires from each of the switches to the corresponding switches on the gamepads. I also seperated the top button, so it would work as the second fire button. I ended up taping two old Wico leaf switches to the joystick for the start and select buttons.

Anyways, it worked great! And the best part was, it still had the Atari cord, so it would work on my XE or my ST (minus the second fire button), while working on the TG16, all at the same time. Plus, if you were REALLY careful with keeping the wires close, you could close up the original gamepad and use it as if it were never modified.

The moral is, you can probably do this with a Gravis or another gamepad (a two-button one would probably work better, unless you want to graft extra buttons on - I did that with my 8bit trackball to ST trackball hack - added an old microswitch and big red button to the right on the ball, so both buttons were on one side). I haven't tried

it, though I'm tempted to now... Except for the problem of finding one of those great old microswitch joysticks from years ago!

I've gotten quite a reputation among friends for my various hacks - that last one was possibly the most successful. I remember one from Electronic Games, years ago, where some guy, unhappy with the joypad on his... Colecovision? Intellivision? (One of the ones with the numbers as well as the directions), turned an old push-button phone into his new joystick.

200. Ataris and modems

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-12 00:00:00 UTC
From: kendrick@cs.sonoma.edu
Message-ID: <199601120804.AAA29798@zippy.sonoma.edu>
Source record: 86475

Ok - totally out of date, but I'd just like to emphasize that the following
four programs RULE:

BobTerm 1.22 - Tried and true. Ok terminal (never seen it with an XEP80)
high speed and good set of protocols. Dial menu is nice too.
FlickerTerm 80 - High speed, easy to get used to, nice font, great VT and
ANSI terminal! Backscroll and a dial menu would be nice.
Protocols? :)
Ice-T - High speed, cool menu-based interface, nice font (for 3bit),
goot VT terminal (needs bold; Lynx kinda sucks without it.
Underline is cool though (dunno if the latest FT80 has that)).
BACKSCROLL KICKS BUTT!!!!!!! Needs a dial menu. Looks like cool
protocols planned (X already). Gonna be a Y too?
Atar-Z-Modem - MUCH cooler than I ever expected. Built-in simple term,
autodownload, shows what's going on (kinda needs a "this
many bytes transfered" stat line, though; at first (I've
only DL'd once and I'm already this excited! ;)) I couldn't
tell if it was actually successfully storing the data it got.

So - if you've got a modem, you NEED to get these puppies! BobTerm is kinda
being replaced by the other three all together, but is of course useful for
all of it's DL protocols and it's dial menu.

Got a RAMdisk, stick all three on ;)

201. Re: What is the Atari 850 Serial Interface?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-12 00:00:00 UTC
From: Michael Ellis <michael@anest4.anest.ufl.edu>
Message-ID: <4d5rlo$9da@no-names.nerdc.ufl.edu>
Source record: 86476

The 850 Interface provides your computer with two RS-232 standard serial ports (R1: and R2:) and a parallel printer port (P:).

Note, however, that the pin assignments of R1: and R2: are NOT the same as, say, the 9-pin connectors found on a IBM-clone. You will need to buy a special DB9-DB25 cable or make your own in order to hook the 850 up to a standard 25-pin RS-232 device (such as a modem).

The printer port also requires a special cable.

Hope this helps...

-Michael Ellis

I have some info about it on my Atari page:
http://er4www.eng.ohio-state.edu/~funkr/Atari/

I recently fixed the schematics to make them MUCH more readable than
they used to be.

>Shouldn't assume.. it makes an.. oh, sorry :)

>-bill!

You won't need to turn off the DLI's, as long as the DLI's don't last longer
than 1 scanline. If you do that, you can use as many of them as you wany.
Maybe you remember my 'Miracle' demo which I made years ago. It used 156
DLI's to play a sample while loading the next part. Later on, after finishing
the demo, I even fitted 312 DLI's on one screen while loading, which resulted
in a replay rate of 15.6 kHz. So the point is, if you need to set a certain
background color and set it back after 8 scanlines, don't do 8 STA's to WSYNC
but leave the interrupt and start a new one 8 sl's later. Also, if you want
16 scanlines fading in and out, use 16 DLI's etc.

l8r,
Ivo

Message-ID: <4d5d4m$e69@sirius.cs.pdx.edu>
Source record: 86481

Hi everybody! Like the subject says, I'm looking to buy an XL in good shape with Ben Poehland's SuperVideo 2.1 (from Atari Classics) installed--my eyes can't take the hours of staring at composite monitors I put them through, but I'm not too coordinated with a soldering iron and so don't want to do the upgrade myself--it'd be way too frustrating.

I'd prefer a 1200XL, but would consider an 800XL (or even an upgraded 600XL). 64K RAM is fine, but more would be nice (when is it not?). 8-)

Alternatively, if any of you soldering whizzes out there want to install the upgrade in an XL for me and make a few bucks, that would be fine too. I have a good local source of cheap 8-bits I could raid (thrift store with incredibly low computer prices).

E-mail me and we'll talk prices.

Thanks,
Alex Chamberlain

The next SwapMeet is Monday, February 5th, 1996.

ACE of America, an All Computers and Electronics User Group, with a special emphasis on Atari. At ACE Swap Meets you might find Atari, Apple, Macintosh, Commodore, Amiga, IBM & Clones, Nintendo, SNES, Sega Genesis, Jaguar, Game Boy, Game Gear and Lynx. You could also find the following items to go with your system, such as Printers, MoDeMs, Monitors, Hard Drives, Disk Drives, Power Supplies, MIDI Devices, Mice, Joysticks, CD Roms, Cables, supplies and Accessories.

ALL COMPUTERS, GAME MACHINES AND ELECTRONICS ARE WELCOME!!

ACE Is currently holding Monthly Swap Meets on the First Monday of each Month from 7 PM, except on certain Holidays that we must reschedule due to our facility being closed. Swap Meets are Held at 1819 NW Everett at the NW Service Center 3 Blocks North of the corner of 18th and W Burnside in Portland, Oregon. USA! Table space is $10. Tables provided as long as they last. Show up early to get a good table, like 6:30 PM.

FREE ADMISSIONFREE ADMISSION**FREE ADMISSION**FREE ADMISSION**

At Februarys SwapMeet do we have a SweetHeart of a deal for you! A Hewlett Packard Deskjet Printer offered as a Door Prize! Any one can win, just show up for the drawing!

PLENTY OF FREE PARKINGEVERYONE WELCOME**PLENTY OF FREE PARKING**

FOR INFO CALL OUR SWAPMEET HOTLINE WITH 24 HOUR RECORDED INFO, CALL: (503)650-7196 OR FOR FURTHER INFO FROM BEN, INCLUDING TABLES: CALL FROM 3 PM - MIDNIGHT / MON-THU, FRI 3 PM - 6 PM: CALL BEN AT (503)256-9974!! IF BEN IS AWAY FROM THE PHONE, PLEASE LEAVE YOUR HOME NUMBER AND HE'LL TRY TO RETURN YOUR MESSAGE! THESE SWAP MEET SPONSORED BY ACE OF AMERICA!!

This Message is distributed throughout the Pacific NorthWest, everyone reading and their Brother is welcome to come and Attend!!

Please Direct all Replies to bensmith@teleport.com in E-Mail or call (503)650-7196 anytime.

The next SwapMeet is Monday, February 5th, 1996.

Message-ID: <4d8o3j$6jg@news.clandjop.com>
Source record: 86484

I am not a regular on the 8-bit newsgroup but wanted to "butt in" for a second. I have a nearly complete set of Antic magazines (I think one is missing about issue #2 or 3) and A.N.A.L.O.G. before they went to the ST. If anyone is interested, I would be happy to pass along specific issue and date information. My wife says they have to go and I really don't want to trash them.

I'll monitor this newsgroup for a couple of weeks, or e-mail me if interested.

Mike Davis <mdavis@clandjop.com>

210. Re: Favorite Synapse Games

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-13 00:00:00 UTC
From: Frito@msn.com
Message-ID: <00001bd9+00001469@msn.com>
Source record: 86485

My favorite Synapse games you ask:

- New York City (i loved just driving around)
- Electrician (I think this was synapse)
- Zeppelin
- Shamus

Zeppelin and Shamus still work, however I haven't played Electrican
or New York City in years, as these disks have bit the dust.

Synapse was a great software company when they were in their prime.

Source record: 86486

(Michael Ellis says 850 requires 'unusual' or special RS232 and printer cables.)
I've seen this mentioned before. Maybe I got lucky or maybe what's available today isn't like what I got years ago, but I just bought a standard 'AT' 9 pin to 25 pin RS232 cable and used that. And my printer cables were likewise 'ordinary' 15 pin to centronics. Can anybody clear this up, or am I just causing confusion. The FAQ has all the pinouts of the 850 if anyone is uptite, but I would take a bet that any 15 to centronics from your biggie computer store would do for printer and any 'AT' 9pin to 25pin 'serial' cable would work fine.

The 850 has four serial ports, but there is little or no software that supports ports 3 and 4, and I think port 4 was a current-loop serial port, not RS-232.

Message-ID: <30f795db.5553681@swsbbs.com>
Source record: 86490

At one time, I owned a 1200XL and a 520ST -- I loved the
machines, and I am sure I would still enjoy them if I had them... But
time has passed, and they were lost somewhere in the shuffle. So, I
celebrate when I find the Xformer for my PC, and I anticipated all the
hours of enjoyment I would have rediscovering those classic games I
owned. There is one problem: I can't find the games!
Now, if one is interested in Commodore 64 files, one only has
to use an internet search string or two, and one will come across
1000's of old programs. Atari seems to be limited to the University
of Michigan Archive, which is great, if one enjoys the shareware.
But I want to play Alley Cat, and my old copy of Donkey Kong.
I would like to play Dig Dug again... Where can these games be found?
Surely the user base is wide enough that a comprehensive
archive could be created! Hell, I would even donate my FTP site (slow
as it may be) for the cause.
If anyone can help me in locating these games, please post or,
better yet, email me at jay.trevor@swsbbs.com
Many thanks,
Jay

Date: 1996-01-13 00:00:00 UTC
From: sloopy@alaska.magpage.com
Message-ID: <4d8nmj$dme@tofu.alt.net>
Source record: 86493

if your drive does spin up normally but just doesnt respond to the atari
look on the back of the oard and you will find a chip labeled '3086'
that is bad (if and ONLY if the drive acts normally except for responding
to your atari....) i assume the the drive did work at one time in its
current config.... try replacing the Disk Controller IC (large 40 pin IC)
labeled 2793 (swap with one from a good 1050...) both of these chips are
common chips to die and cause the above mentioned faults...

sloopy.

Cyrus (cyrus@lagrange.amd.com) wrote:
: I don't want to send it to the graveyard yet so...

: I am looking for help on how I can diagnose the problem with my 1050
: drive.
: I actually have two drives...the other one works. The broken drive
: exhibits
: the following:

: I turn it on and the power light comes on, but no drive movement occurs
: and
: the drive is not accessible from the atari.

: I have narrowed (slightly) the problem down the the board in the drive.
: The
: drive assembly/mechanism works fine when placed in the good drive. Also
: the problem is not in one of the two chips that come with the ICD
: doubler
: package - I swapped these between the two drives and they work ok.

: Are there certain test points on the board that I can probe...would I
: need
: a logic analyzer or 'scope?

: Ack.

Re: BobTerm

Probably one of the best terminal programs written for the Atari
8-bit. Years ago, I had been using the Express! (1030/XM-301; 850)
series by Keith Ledbetter, and thought it couldn't be beat.

BobTerm worked fine with the XEP-80, although there tended to be
minor nitpicks, because of the limitations of the screen emulation.
Editing what you saw on the 80-column screen didn't exactly
correlate to its 40-column counterpart, and sometimes I'd end up
with weird messages that looked like I was talking in gibberish.

I have the following games for the 8-bit Atari:

Legionaire (cassette) and Andromeda Conquest (cassette). They include all docs, box. etc. Like new condition.

Asking $5 each. Buyer pays shipping.

If anyone is interested, let me know.

Thanks,

Michael

223. Adapting 8-bit joysticks to PCs

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-13 00:00:00 UTC
From: richard@stingray.manawatu.gen.nz
Message-ID: <011396095333Rnf0.79b6@stingray.manawatu.gen.nz>
Source record: 86498

Does anyone have the pinouts and perhaps a bit of info towards converting 8bit joysticks to work on a PC? I tried a friend's analogue stick a few weeks ago, and hated it, so I thought I might convert my Wico stick to work on my PC. I'm not going to take it apart or anything, as I still want to use it on my 8bit, but thought someone out there might know.

I know that it won't work on all the games that require an analogue, but I thought that it might be able to work on games that use the Gravis (???) gamepad which I _think_ is just a bunch of buttons (probably like one of those horrible Sega things), and hence would be digital aswell. I figure that this could tide me over until I found a suitable analogue stick (although I'd still use my Wico one), and the cash to buy it...

Having said all that, I also thought about modifying one of my many unworking joysticks (dad bought about 20 at an auction for me a long time ago, which I raided for parts over the years) and putting the analogue components into that.

And further into the future, I have an old steering wheel from my first car that I replaced about 6 years ago, and was thinking about attaching it to a pot' and maybe whipping up some sort of accelerator pedal (perhaps I should just buy the front of a car-wreck and place a computer in that, and use everything in the car for controlling the games??? *grin*)

Thanks,
Richard.

> - New York City (i loved just driving around)
> - Electrician (I think this was synapse)

Some more classics! NYC was from 1982(?) I think. I never won the game. Always ran out of money or couldn't keep pace. Electrician was great, too. Nice title screen, and good music and sound f/x, as usual.

The only Synapse klunkers I can think of offhand were the "novel" based text adventures. Antic raved about the beta versions of games (if I remember right, one of them was called "Mindwheel") because of the rich prose and complexity. They seemed to hint that Infocom would have serious competition.

Unfortunately, the final version was butchered down to size to make it more marketable to Atari owners with less hardware. The original concept required two disk drives. I never played this, so I would never know.

225. 800 XL BASIC

226. 1200xl still for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-14 00:00:00 UTC
From: keithlet@ix.netcom.com
Message-ID: <4dbtfd$5cs@ixnews8.ix.netcom.com>
Source record: 86501

Just to keep the marketplace interesting, I dug out my hardly used 1200XL.
The following is *still* for sale:

1200XL console, unmodified, w/ p.s.
1050 FDD w/ p.s.
1020 color printer, never used
XDM 121 daisy wheel printer, never used
"ATARIMusic II", sealed
"Success with Math - Linear Equations", sealed
DataSoft "Napolean in Russia"

was: All of the above for $115 or vaguely reasonable offer.

++ Now marked down to $90 OBO!! ++

I need to scrounge up a RF switchbox to verify operation of everything, but
it should be OK. I can deliver in the San Francisco Bay Area (at my
convenience), otherwise U pay shipping of your choice. *If* I can find any
cartridges around they will be included.

I couldn't agree with you more. The injustice of these narrowminded, apple-touting bigots who call themselves computer historians.

There were WAY more computers than just Apple and PCs, you have Atari, Commodore, TRS 80, TI, Spectrum, Timex Sinclair ZX80, and tons and tons more. Among them, Commodore 64 & 128 were BY FAR the most popular in the world, even moreso than IBM Compatibles up until the late 80s. Yet what do we hear about, the crAPPLE which made up some 10% of the market and that was only in the US (again, I mean up until the late 80s so don't flame on this).

I'd say if your gonna leave an 8bit out, leave them all out and just go CPM -> IBM PC -> IBM XT ect... Or, preferably, put the venerable Commodore 64 and the Atari 800 in along with the crAPPLE. Yeah, at least include the most popular 8bit system (C64) and the second and third most popular 8bits with it.

Thats my 64 cents worth (pun intentional).

BTW... My Commodore 64 and Atari 800xl are still hooked up (to this day) and I still use them! So there!

Source record: 86505

A while back in fact about the first of the month I posted several Atari 8bit 400/800 and XL XEGS system cartridges up for reasonable offer.. Well I did in fact reveive many offers, however the first to come through got the offer and the cartridges were set aside for them. Today the 13th of Jan I have receive 1 check and or money order and that order was filled, sorry to say that perhaps someone had cartridges on hold that they didn't pick up and I could have moved them to a person that would have been happy with the deal.

Effective 1/14/96...all hold are cancled with the exception of those that have contaced me stating the mo/check is in the mail which would have been as of yesteday..one person out of town no problem and jameson..no problem will hold your carts..and send.

1/14/96 I will repost cartridges available along with some other 8bit software I have unburied..Make an offer you have 5 days for me to receive payment and I will ship same day..If not received then it will go to the next money order I receive...If you send a money order or check and it is received late..I will fill what I can and send you a refund on what is not filled..this way everyone gets what they want when they actually want the product..

Bob

Date: 1996-01-14 00:00:00 UTC
From: mikeedmo@voicenet.com
Message-ID: <4da7l1$dsu@omni1.voicenet.com>
Source record: 86510

I need a little help with this...

Got it compiled and running under Linux (currently 1.3.35). I am having no luck reading normal system files via the "H:" drive. Using MyDos4.X, I can get a directory listing fine, but I can't run files from H: or copy them to disk images. This is too bad, because most of my Atari stuff is in plain-file format. With PC Xformer, you can specify a file on the command-line and it becomes a virtual diskette. Has anyone gotten this to work w/Linux, or can anyone point me to a utility to create an XFD/ATR disk image from a plain OS file?

This emulator is getting better and better...it can even run some of the funky text-graphic games like Ali Baba and the Forty Thieves, which PCXF has always choked on...

-Mike

237. P:R:Connection R: cables..

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-14 00:00:00 UTC
From: kendrick@cs.sonoma.edu
Message-ID: <199601150259.SAA20361@zippy.sonoma.edu>
Source record: 86512

Hello! It is not exactly spelled out in bold in the P:R:Connection manual, and I've always remebered this to be true, but is the connector between the P:R:Connection and a standard RS232 device (ie, modem) STANDARD?

Like, "I could walk down to Radio Shack and buy one" standard? Again, I always remember hearing that it's not, but I spoke to someone who thinks that it may just be the parallel (printer) cable.

So... if it ISN't a standard cable, where can I get one, and/or is it very easy to build? <gulp> The P:R:Conn. manual has a pin-to-pin listing, so I wouldn't need the description on how to build it. BUT again, I wanna just go to a store or something and have one pre-made.

Thanx!

-bill!

238. Closer To Home Shareware

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-14 00:00:00 UTC
From: tomhunt@bright.net
Message-ID: <4dbve6$gf3@brutus.bright.net>
Source record: 86513

Please note that originally this message was formatted very nice. Oh well!

-----BEGIN PGP SIGNED MESSAGE-----

Basically what I'm currently offering as Shareware is exactly what is
available from my home page- bright.net/~tomhunt More CTH shareware is
available from the Closer To Home BBS, at 419-368-4413 (300 - 14,400 USR).
But here is a list of some of them. Note that almost all of my programs
are for use with Sparta Dos 3.2(c,d,g,gx).

armorizer This program wraps your executables with an added layer of
protection.
Whenever you run an armorized program, an executable header
will check the file's current crc with the original crc.
It uses crc-16, the same as ymodem/ymodem-g/xmodem crc/1k
xmodem. If an armorized program changes in any way, the
executable armor header will tell you about it.
Very useful in guarding against viruses and corruption.

check Useful for seeing if two files are identical. It uses
crc-32, and the very same polynominal used by pkzip. This
assures an added level of accuracy.

cth_sfx The SelF eXtraction utility. This will take one or more
files, and create a self extracting archive out of them.
A .sfx file can be executed, and all of the compressed
files contained in it will be automatically extracted.

Another variation of the sfx utility exists. It's a Self
eXtraction and Installation (SFI) creation utility. The
programmer can tell it what files goes into what
directories. Upon execution of the sfi program,
it prompts the user about which drive(s) to use. This
program is offered to developers, under a licensing
agreement.

filenote This utility allows you to attach filenotes to programs and
.arc files. Attach filenotes to .com, .bas, and .arc files
effortlessly.

frag A graphical utility which displays on a hi-res screen a
representation of the fragmentation on any disk.

longlib A library of long integer (32-bit) math routines.
For C and Action.

Makehelp A mac/65 programmer's utility. Allows a programmer to
create a program's internal help menus using a text editor
like textpro. This utility takes the text file and turns
it into mac/65 code, which can then be .included into the
source code, and assembled right into it.

Readit Using speach phonemes, this utility will take a text file
and read it aurally to you. It uses speach synthesis.

shell/shellgx Enhancements to the sparta 3.2d and 3.2g/gx versions of
dos. They allow you to specify up to 3 search paths,
prints at each prompt the current working directory, and
even checks the disk for certain types of disk corruption
that even cleanup.com doesn't check for.

snapshot 3.3m Using snapshot is like having two computers in one.
Requires 128k or more ram.

Sound Utility Supports all memory upgrades, from a base 64k machine,
clear up to 1088k monsters. Even plays Windows .WAV files!

Term80 For the ultimate 8-bit terminal program, use Term80.
Requires that your modem be connected to either a Black
Box or MIO. Plays ANSI bbs games at 14.4 k-baud
ARQ/v42 BIS without ever dropping any characters. Play
exciting multi-player ANSI BBS games like- Global War,
Land Of Devastation, Freshwater Fishing Simulator, Barren
Realms Elite, etc. Use ANSI message editors.
Download using ymodem, 1k-xmodem, or xmodem crc. Upload
using ymodem. It's a term program that's built like a bbs
program!
- - --
There are a few others that aren't on my home page. Such as-

rc4 An encryption/decryption program based upon RSA Data
Security's rc4 c source code.

menu A great joystick controlled disk browser. Plays .dig
files, displays three types of picture files, displays
atascii and ascii text files Uses colorful players.
Much, much more.
- - --
All of my programs come with complete documentation of how to
install and use them. They also come with a shareware notice. Basically,
if you enjoy the program and continue to use them, it asks that you send
a shareware donation to it's developer.

ftp://ftp.cs.dartmouth.edu/pub/crow/atari/binload-2.4.tar.gz

This program (for DOS or Unix) will analyze any Atari binary load file
and tell you:
* Run address
* Init addresses
* Load blocks
* Dissassembly of each block (with -d flag)
And it will clean up the file if needed, merging adjacent load blocks and
moving the run address to the end of the file (I know of at least one
broken loader that this will help).

twicky@essex1.com wrote:

> Anyone know of an 8-bit emulator for Mac? Need something soon.

Search back on prior messages for "Rainbow". It's an 800/xl emulator that was made for the mac last summer. A demo is available at ftp sites...to enable sound, the xl operating system, and file copying routines routines you need to pay the shareware fee (about $20 US or so).

BTW, if you want my 2 cents on it.....if you've got a PowerMac, you definitely want Rainbow. It runs about 90% of 8-bit software; even some games like Alternate Reality that I thought for sure would crash it. If you're using an '030/'040 Mac, emulation is really too slow to be useful.

Are you using a new blank .ATR image of the appropriate size and density?

You might just try expanding the .DCM image using APE's built in
DCM->ATR converter. Option 'A'.

Your not trying to run APE under windos are you?

Try:
ftp://ftp.cs.dartmouth.edu/pub/crow/atari/unix2atr.c

It creates a MyDos disk image from a directory structure, but doesn't
set up the used-sector bitmaps and the boot sectors yet. Still, if
you don't boot from or write to the disk image, it should work.

>This emulator is getting better and better...it can even run some of

Message-ID: <4de11a$j5i@stratus.skypoint.net>
Source record: 86530

I recently started using the sio2pc cable with the shareware version of APE107. It works beautifully for the most part. Here is my problem:

I wanted to copy some files from disk images to the real disk drive. I only have one disk drive and set the selector switch on the back of it so it was D3:. I loaded atr images in slots 1&2. After booting up the atari with MYDOS453 I tried to copy files D2:*.*,D3:. After a few files have been copied APE completely locks up. It always locks up during the write to the real disk drive. This also happens with Duplicate Disk. Any ideas?

No. On the DB9 end, pins 1,2 and 4 are 'wrong'. Here is how to
modify one:

Move pin 1 to pin 2
Move pin 2 to pin 4
Move pin 4 to pin 1

I'm speaking of moving the signals.

From: ai123@FreeNet.Carleton.CA
Message-ID: <DL8sx8.GAE@freenet.carleton.ca>
Source record: 86534

I would like to read the roms from some 5200 carts in my 800xl. Since
the machines are so similar I guess I should just be able to
make the roms appear @ $A000-BFFF as normal 8 bit carts do, and
5200 carts?

I have the pinouts for both the 5200 and 800xl cart ports, is it just a matter
of wiring the A lines on the 5200 cart to the a lines on the 800xl, same
for the D lines?

What about the lines that are marked 'Enable 80-8F', 'Enable 40-7F' on
the 5200 port? Also, on the 800xl port, there are lines marked
R/W, a anohter odd one not matched on the 5200 port.

Do these need to be wired any special way, or just leave them unconnected?

I would also like to be able to dump 2600 carts, though these carts
appear in the 2600 system @ $F000. Can I do a similar thing
w/ these carts?

Thanks!

Steve

The easiest way to do this would be to purchase a Newell upgrade kit,
otherwise, you'd have to create a perf. board for the XL modification.

XE's are MUCH easier to upgrade.

No, the PR: and 850 use their own pinout Rs232 cable. You can
purchase a cable from B&C, Best, etc.. or build one yourself.

(We been talking about RS232 and printer cables for the 850.)
Now, Rich Mier knows what he's talking about and says the 'standard'
db9 to db25 is 'wrong'. I'm amazed. I swear this discussion came up
once before and I got out my RS232 and 850 or P:R: books and even
tested pins with an ohmmeter. Son of a gun. I never had any problem
with my standard 9 to 25. I even hooked up a 14.4 to my MIO once and
it worked. Lemme read that msg. again and write that down.

The Modem cable on the P:R: is a _standard_ 9pin to 25pin modem
cable. Today, it seems as if the /standard/ is 25pin to 25pin cable.
So When people tell you it is or is not standard, both are correct
in so much as their own minds.

Source record: 86539

(Rich Mier says pins 1, 2 and 4 are wrong on a 'standard' db9 to db25
cable.)
Well. I checked one of my modem 9 to 25 cables with ohm meter, 850
book and RS232 pins of a modem book (25 pin).
Here's what I get with the ohm meter and books.
850 9 pin # # Modem 25 pin
DTR 1 20 DTR
CD 2 8 CD
TX 3 2 TX
RX 4 3 RX
Gnd 5 7 Gnd
DSR 6 6 DSR
RTS 7 4 RTS
CTS 8 5 CTS
NC 9
Ok, So I must be wrong and I have a special cable. BUT, dear readers,
The above should be correct. Switch 1 to 2 and now DTR connects to CD.
2 to 4 and CD connects to RX and 4 to 1 RX to DTR.
I AM CRAZY, BUT (big but there) I'm really thankful my computer didn't
lock up, I did this online.

William Kendrick (kendrick@cs.sonoma.edu) wrote:
: Hello! It is not exactly spelled out in bold in the P:R:Connection manual,
: and I've always remebered this to be true, but is the connector between the
: P:R:Connection and a standard RS232 device (ie, modem) STANDARD?

Bill,

Not standard. Requires a modified cable.

: Like, "I could walk down to Radio Shack and buy one" standard? Again, I
: always remember hearing that it's not, but I spoke to someone who thinks
: that it may just be the parallel (printer) cable.

You can get a DB-25 Male to DB-25 Female RS-232 Shielded Jumper Box from
Radio Shack and wire the pins per the P:R manual, but you will also need
to get a female DB-25 to male DB-9 connector. Part number for the Jumper
box is 276-1403. You can also mailorder for a DB-25 to DB-9 breakout box.
These solutions would allow you to use a standard IBM PC RS-232 modem cable.

: So... if it ISN't a standard cable, where can I get one, and/or is it
: very easy to build? <gulp> The P:R:Conn. manual has a pin-to-pin listing,
: so I wouldn't need the description on how to build it. BUT again, I wanna
: just go to a store or something and have one pre-made.

If you want to buy one, then American Techna-Vision sells 'em pretty
cheap (about $10), so does B&C, or you can order one from Redmond Cable for
$20 or so bucks.

You will NOT be able to buy one off of the shelf.

Tom

I have the following for sale and would like offers on this stuff.

Hardware:
2 800xl's
1 400
1 400 cassette drive
2 xl cassette drives
1 xl 1050 floppy drive

Assorted cartridges:
star-raiders
atari basic
other cartridges (?)

Software:
basic tutor cassettes (5)
zaxxon cassette
other cassettes (?)
syncalc disk

Otherstuff:
power-supplys and cables for all the above hardware.
(might be missing some rf cables for hooking to tv)

If interested, Please e-mail me since i do not read this newsgroup very
often.

I don't know of a FAQ that would tell you more about the Atari 7800, but
the XE is covered in the Atari 8-bit Computers FAQ which you can find at
http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/faq/faq.html

The printer port uses a 15-pin D-sub connector, as does the P:R: and MIO
(and BB?). IBM-compatible computers (what most people mean by
"standard") use a 25-pin connector for the printer and 15-pins for the
joystick.

>am tired of holding down the option key.

I seem to recall there was this special hardware modification that reversed the procedure. Meaning, if you wanted to boot up BASIC, you held on the OPTION key instead. I just don't remember where I saw it -- I think it might have been Bob Puff's company?

271. New Alternate Reality site launched! :)

I hereby announce that being "disconnected" from an Atari 8-bit
machine for SEVEN years doesn't stop you from coming back! :)

I have just launched a new site for the Alternate Reality games series
(and also tried to mail everyone about it) :)

Please feel free to have a look and tell me what you think!

It is located at:

http://www.ksk.sala.se/~sp93rob/dungeon

If you happen to like it or recognize the game I would like to get help
with the following, if you have the time/good will: :)

*Get in touch with someone who shares the same interest as I (AR).

*Get in touch with as many ARFF people as possible (Alternate Reality
Freak Federation)

*Get info about what stopped the company from completing the series and
what Datasoft (Software Toolworks?) is doing nowdays and how to get in
touch with them!

*Get help with getting the game and an Emulator for as many formats as
possible! (pref. PC) (I have a .arc file but don't know how to use it...
call me a lamer!) 8->

*Get screenshots or something that I can use in my site (or scan).

*Get something other than .wav files of the music in the games.

*And a whole lot of other stuff, mind you, this game is BIG!!!!

Thank you for taking your time and reading this!

Yours Sincerely Robert "Thunderball" Hagenstri¿½m

Sure it's possible. It would take an *extraordinary* amount of work.
You would need to setup alot of configuration files, dealing with number
of registers, pseudoregisters, floating point registers, linking conventions
and lots of other things. If you're curious as to what this includes, grab
yourself a copy of gcc-2.7.0 (2.7.2's optimizer breaks things on intel x86
machines if you dont specify -fno-strength-reduce) and check out the
gcc-2.7.0/config subdirectory. I do think they have a 65816 cross-compiler
configured though. Once you set everything up, when you configure gcc
you need to specify what the target host/system is.
(ie: ./configure --target=romp-ibm-aos)
Yes, I do have way too much time on my hands...

The information I have is the ANSI or IEEE standard for a
RS232C, DB25F to DB9M cable. The Atari is from the 850 Manual.
I've had to do this 3 wire swap for other many times. Once even had
to build a DB9M to DB9M (Gender Changer) and do the wire swap at
the same time. Used on a 2400Baud Pocket Modem made for a MAC.
Worked fine on a 850.

To the best of my knowledge, the last version of MULE produced was for
the Nintendo. (The old 8bit one.) The only other versions that I know
of were for the Atari 8bit and the C64.

(Actually, when it was first written, EOA [as they used to call
themselves - never could figure out where the O came from] claimed
that it would only be released for the Atari 8bit, since it was the
only machine advanced enough to run it. :)

I also find it amusing that the C64 version still has the planet
"Irata". :)

Yep - the last "official" version. Got it. The Atari 8-bit and C64 versions are much better. They seemed to have scrimped on the graphics quite a bit in the NES version, and it just doesn't "feel" right.

I'm still looking forward to an update remake for modern hardware, if EA can ever get it together....

289. Uploaded: Atari800-0.2.7.tar.gz

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-16 00:00:00 UTC
From: David Firth <david@signus.demon.co.uk>
Message-ID: <1996Jan16.203732.959@signus.demon.co.uk>
Source record: 86553

I have just uploaded version 0.2.7 of the Atari 800 emulator for
Unix (and Amiga) to the following location:-

ftp://ftp.demon.co.uk/pub/emulators/atari/Atari800-0.2.7.tar.gz

Changes in 0.2.7

- Renamed atari_h_device.c to a more general devices.c
- Emulator (private) opcode ESCRTS ($d2) added to support patching of OS.
- Printer device supported via Unix lpr command.
- Moved from RCS to CVS and added rcs Id keyword to all C files.
- Emulated OS: Better handling of Keyboard and ATASCII to screen
code conversion. Editor uses LMARGN, RMARGN, ROWCRS and COLCRS.
- Many other changes to EmuOS including implementation of SETVBV
COLDSV and WARMSV.
- Detection of X11 server supporting the MIT Shared Memory Extension in
preperation for shared memory pixmaps.
- Corrected bug in H: device (filename extraction routine).

Changes in 0.2.6

- Corrected calculation of number of sectors and reading of double
density ATR files (Thanks to Preston Crow)
- Correction for Linux ELF systems.
- XVIEW and NAS work under Linux/ELF
- Default directory for XVIEW Disk File Chooser is set within the
Makefile. By default it is pointing to /usr/local/lib/atari/DISKS
- Corrected bug in Missile 0 to Playfield collision detection.
- Corrected WSYNC bug (multiple stores to WSYNC during one scanline).
River Raid now runs correctly.
- -emuos to enable emulated operating system. Users without the
necessary atari OS ROMs can use this option to boot disk images/ROMs.
Currently this is very experimental and runs very little without
problems. Defender runs perfectly but if you haven't got the OS it's
unlikely you'll be able to get this either!
- H0: device accesses the current directory on your Unix Machine.
- H1: through H4: can access four directories specified either within
the Makefile or via the -H1, -H2, -H3 and -H4 command line options.
By default they are set to /usr/local/lib/atari/Hx where x is 1, 2,
3 or 4.
- H5: through H9: duplicate H0 through H4 but have automatic ATASCII
to ASCII translation. They are not suitable for binary files.
- All files accessed via the H: device have Unix filenames consisting
entirely of lowercase letters.

>The printer port uses a 15-pin D-sub connector, as does the P:R: and MIO
>(and BB?). IBM-compatible computers (what most people mean by
>"standard") use a 25-pin connector for the printer and 15-pins for the
>joystick.

Oh yeah, and I#ve bought an 850 without manual (I always do stupid
things like that. Could somebody *please* help me and tell me which
pins on the 850 printer port have to be connected with which pins on
the Centronics port of the printer??? Many thanks in advance!

Peter

293. ChromaCAD 3D

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-17 00:00:00 UTC
From: kendrick@zippy.sonoma.edu
Message-ID: <4di9o0$ae2@nuke.csu.net>
Source record: 86418

I'm curious about ChromaCAD 3D. The author is (last I tried) no longer contactable at his AOL e-mail address ("ItsMarver@aol.com").

I was hoping to get some demo pics from him.

Anybody else got anything to share from this program? (Example files, comments, etc.)

And what mode does it use? Long ago I read something about "64 colors" - that makes me think of ColorView mode 15 right off the bat. Am I right?

Thanx!

-Bill-

>and lots of other things.

... which is why I haven't done it already. :-)
And this is a compiler that was built for portablilty -- it would be
harder on one that wasn't.

> If you're curious as to what this includes, grab
>yourself a copy of gcc-2.7.0 (2.7.2's optimizer breaks things on intel x86
>machines if you dont specify -fno-strength-reduce)

(2.6.3 has the same problem, so I just put that switch in the *cc1
section of my gcc specs file.)

> and check out the
>gcc-2.7.0/config subdirectory. I do think they have a 65816 cross-compiler
>configured though.

Hey, I guess that means somebody else already did most of the work.
Although I don't know how different the 65816's native mode is from
its 6502 emulation mode.....

Just stumbled across this while web browsing...

Apparently, on the January 18th episode of "Invention"
on the Discovery Channel, they'll be running a segment
on the origin of video games. Sounds like a must-see!

The 850 Manul doesn't have a point-to-point pin out, BUT,
is does list what signal is on each pin. Here it is:

Pin 1 data strobe
2 databit 0
3 databit 1
4 databit 2
5 databit 3
6 databit 4
7 databit 5
8 databit 6
9 data pins pullup (+5V)
10 NOT USED
11 signal ground
12` /fault (+5V) (fault is LOW active)
13 busy
15 databit 7

Hope this helps, Rich Mier

297. WTB: "Crypt of the Undead" and "The Nightmare"

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-17 00:00:00 UTC
From: mgfrank@acsu.buffalo.edu
Message-ID: <4djlgh$ibj@azure.acsu.buffalo.edu>

I'm looking for the Epyx games "Crypt of the Undead" and "The Nightmare"
by Marc Russell Benioff for the Atari 8-bits. If anyone has these for
sale or trade new in box or at least complete in box, or knows where I
can buy them, please let me know! Original disks only.

Thanks!

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" shareware/freeware/PD developers should also be listed.
```

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, public domain software/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No product can be developed by more than one developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information is given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of the more prominent sources I use. Current Notes magazine; Atari Classics magazine, published by Jim Hood and Bob Woolley; and The Atari 8-Bit Omnibus, published by David A. Paterson.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

300. Atari 8-bit Support From Richard Gore

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-17 00:00:00 UTC
From: CHMRIG@EAST-01.NOVELL.LEEDS.AC.UK
Message-ID: <3BD28256163@east-01.novell.leeds.ac.uk>
Source record: 86425

```
ATARI 8-BIT SUPPORT FROM RICHARD GORE
-------------------------------------
NEW PRICES FOR 1996!!

My list of software for sale has now got quite long, so to save space
and bandwidth I will just give a list of what I have got along with
their prices, then if you need any further information you can simply
e-mail me at chmrig@leeds.ac.uk and I will supply the information.

My range of commercial software:-

JAWBREAKER #2.99 ($7) disk, tape, Rambit tape 16k
MOUSEKATTACK #2.99 ($7) disk, tape, Rambit tape 48k
ARENA #2.99 ($7) disk, 64k XL/XE
BUBBLE ZONE #2.99 ($7) disk, 64k XL/XE
SUPER PRINT-LAB XE #6.50 ($15) disk, 128k XL/XE
GTRACKER #6.50 ($15) disk, 64k XL/XE
GTRACKER XL UTILS #6.00 ($13) disk, 64k XL/XE
CLIP TRACKER XE #6.50 ($15) disk, 128k+ XL/XE
BLACK LAMP #4.95 ($11) disk, 64k XL/XE
TUBE BADDIES #4.95 ($11) disk, 64k XL/XE

Special offer (1); buy both Jawbreaker & Mousekattack in one pack for
^^^^^^^^^^^^^^^^^ only #5 ($11).

Special offer (2); buy both Arena & Bubble Zone for only #5 ($11).
^^^^^^^^^^^^^^^^^
Special offer (3); buy both Tube Baddies & Black Lamp on one disk for
^^^^^^^^^^^^^^^^^ only #9.50 ($20).

Special offer (4); buy GTracker and GTracker XL utilities for only
^^^^^^^^^^^^^^^^^ #10 ($21).

Special offer (5); buy all 3 'TRACKER' programs, as offer (3) plus
^^^^^^^^^^^^^^^^^ CLIP TRACKER XE for only #15 ($30).

Ex-stock, shrink wrapped commercial software. Limited stocks. You are
advised to check stock levels before ordering:-

Disks: SUMMERGAMES #5.00 ($10)
----- SOLAR STAR #5.00 ($10) also known as Sun Star.

ONE OF EACH ONLY: DROPZONE (disk) #5.00 ($11)
---------------- HALLEY PATROL (disk) #2.00 ($5)
GAUNTLET DEEP'(disk) #2.00 ($5)

Prices in UK pounds (#) include p&p to UK, overseas add #2 for p&p,
payable in pounds sterling or UK cheques, IMO, Postal Orders.
```

Prices in US dollars ($) include shipping to USA, but payment must be in US$ cash, sorry no cheques (checks).

For further information or to order contact RICHARD GORE at

I've been looking for a while for the game "Marble Madness" by Electronic
Arts. I know of only one person who has the game, so I know it exists.

I have the game "Mad Marble Maze" which I think came from Europe, but I
REALLY want the original game by EA.

If anyone wants to sell their copy, or make me a copy,
name your price.

Thanks 1E6 in advance.

>Yes it does, look at page 132 in the revised edition.
> under location 54019 $D303 PBCTL.

I see it, but it's still cryptic... it says bit 3 is "peripheral command
identification, init'd to 60 ($3C)". Forgive my ignorance, but how
is the command line utilised?

>>It does however document the clock in/out lines. Are these actually hooked
>> up inside the unit and useable, or driven to ground?
>
>Those come from pokey. used for external sync for the serial lines.
>Hardly any thing uses them. Drives, printers, cassette doesn,t.

I find this especially curious. If things don't listen to sync/clock
lines, then how do they get data across? I'd like to know a bit more
about the SIO system... any good sources of tech-ref info?

BTW - I wish to be able to use the PBI on my XL's, I have the Antic
issues (the 4 part article) which was very poorly done. It gave some
information, but half way through the series the author changes his
plans, and meanders all over the place forgetting what he's talking
about the PBI. He Yabbles about a specific serial controller project
which wasn't supposed to be the articles intent in the first place!
VERY FRUSTRATING when I bought the issues specially for the PBI series!

Can someone point be to some info I can _really_ use on the PBI ?
(also interested about the XE bus, similar data to PBI is requestes!)

Thanks!!

There are a few that should work with all types of dos. I put that in there
because I know that they work with those specific types of dos. The others,
I'm not sure about.

The bbs <-> news thingie still needs some work. I'm going to do some more
research and see if I can fix the FROM field problem.

Source record: 86433

Hahahaha...

The only self done upgrade on the Atari 8-bit, worse than what
you ask for (notice I did say self done!), is the 800XL to 1mg.

There are several Atari 8bit BBS that carry the docs for this
type upgrade..Find one have about 4hours of free time when you ar
e in a super mood and go through them then start the project..

The first step is taking the 130xe from 128, to 320..got that
done fine..move on to 512k, set it up done. works fine..move onto
the 1mg upgrade...not really that expensive but one heck of a
time consumer...

Done a bunch of these and wish I had a dime for everytime I got
interupted doing one..never fails..take your phone off the hook
disconnect your doorbell! and set up something to shoot the one
that enters your domain before your finished!!

And when you finally get the darn thing finished you actually
feel human and relieved..until the next one comes along!!!

There are several text files available where you can build your own. The files are straight forward, not really hard to understand and if you do it your self..I would guess, the price would be in the range of not over $15.00, including parts from radio shack..your most expensive would be 8 41256k ram chips.

This project will take you approximinatly 4 1/2 hours of un-interrupted time..the worst being building the board with the 3 to 5 chips depending upon which 800xl you happen to have if you have a 22297 chip then it only takes 3 chips for the board..the problem being is you have to obtain a small piece of circuit board from radio shack and hand wire all the pins per the instructions..If you can't find 41256k rams cheap enough I can furnish you with pulls, these were working in another computer (IBM), and I have done a ram test on them with a factory ramtester..for $.75 (cents) each..plus postage..

Remember you have to be a half/a..ed decent solderier...just make sure all connections are soldered tight clean and nothing slopped over..I know you can do it..!! everyone starts somewhere..

bob..

313. Re: P:R:Connection R: cables..

Message-ID: <4dk7qi$7m2@news.tcd.net>
Source record: 86438

Ok, now that we have a trade?....hahaha

Remember, when running a PR:C system that it is not a standard sparta dos or any other dos RS232.COM file...you need to set up the file PRC.SYS, to run instead of RS232.COM!!!!! While many will tell you that RS232.COM will work fine it in fact will not!

You need a cable built. or rather if I can find it a factory cable, which I am sure I have some where here in this mess..I think we can work something out....like hours of your work for a few minutes of my time?? God this sounds aggrivating doesn't it..but At presant I am limited on coding...but am very fimialar with the PRC, 850 ect...

Stupid question I know but why did you go this route over an 850 interface, when they are redialy available ect? And besides the 850, kicks butt...goes to 19.2 insted of being limited to 9600b?? limited PR:C...!!!

If you can't find an 850 interface, I will hold one I am sitting on for you...in exchange...you know what I am looking for..!!

Ah, Tom, do you mean perhaps 228 Baker St.? That is the only 'Holmes' game
for the 8 bits I remember, but I thenk it was by Epyx (I have to check). Sort
of like a computerized 'Clue' game starring Holmes. I have one of those I
would be willing to part with, with disk, manuel, box and notebooks for the
players.

Ya, I've got one of those things. Andy the Personality Robot, brought to you (us) by Nolan Bushnell (after he was bumped from Atari) and Axlon. I always had plans to do some really nifty things with him but never was able to make the time. Did you get the disk and documentation with yours? There was some software which did a few rudimentary things (move, blink, beep, etc.) which was included with the robot. If you didn't get any of this let me know and I'll see what I can do.

You will have a hard time finding any info on the PBI. If you want to make a device like the BB or MIO you will need a EPROM burner. Supra used to make a board called the microport Xl that plugged into the bus. You could than interface various hardware devices through 6821/6520 PIA. I built a clock and a X10 interface and use it control things around the house. The last time I looked Best Electronics was still selling them.

>info on this?

.
Yes, this was reported in "Computer Gaming World", and the story was
that the publishers wanted the developer (who was one of the original
M.U.L.E. developers, I believe) to add "guns and bombs". Yes, "guns
and bombs"! Everyone I know who played M.U.L.E. who hears this has
the same reaction: they all think the publisher is crazy. I'd like
to learn more details on this. If this story is true, I would be
amazed at the stupidity on the part of the publisher, since "come-back"
games are doing pretty well, as far as I know (like the remakes of
Archon, Pitfall and Lode Runner).

Cosmic Tunnels Kids on Keys
F15 Strike Eagle Atari Writer
Antic Antics SpyvsSpy III E T Phone Home
Chohens Towers Karetka
Jet Boot Jack K-Razy Shoot Out..
Hacker...with docs..
Trail Blazer..
Peachtree..accounting package..
this is complete.has all disks ect..
even Peachtree does not have this one
available anymore..the original price
on Peachtree was $199.95..

This is only a small listing of what I have available..I didn't
have time dig it all out..will accept reasonable offer on this
software..not looking to get rich..But if ordered expect the
check or money order within 5 business days..or it goes out to
the first acceptable offer with check/money order in..

Now there is a way to beat the odds..I have a BBS up and running
for BBS Express Professional!...801-967-8738..logon as a new
user. leave the #1 sysop feedback..give me a credit card number
and what you want..in feedback..I can take Visa/Mastercard with
their approval of your amount and order will ship the next day..

Nice thing about Atari 8bit BBS'S they don't have the problem
with someone attaching your info on a credit card nor are they
subsiptable to a virus!!! With BBS Express! Professional, no one
but myself has access to your informaton!!

I also repair Atari 8bit items..with resonable rates not gouge
the user..or will accept your old broken item at a discounted
rate, in trade for something I have already repaired in exchange.

Bob

Ok, I just started reading this thread and am confused. I understand
that there are now one or more CD-ROMs which contain those Atari
disk images used (I think) by SIO2PC and the Atari 8-bit emulators which
run on the IBM. What I am wondering is: is it possible to run SIO2PC
(or some suitable substitute) to access the CD-ROM (more or less directly)
from the Atari 8-bit?
.

>Interface Module are standard serial ports.

Yes, the 850's R: ports have standard RS-232 SIGNALS, but the pin ASSIGNMENTS
are different. IB & C sells 9 to 25 pin cables that undo the non-standard pin
assignments. I made one for myself. I know for a fact that this is true.

>>
>>The printer port also requires a special cable.
>>
>
>I'm pretty sure that's wrong. The printer port is a standard Centronics.

Once again, the SIGNALS are standard Centronics, but the CONNECTOR is NOT a
standard centronics 25-pin connector (on the 850 itself).

322. Atari software - still in package, selling cheap

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-18 00:00:00 UTC
From: twokits@primenet.com
Message-ID: <twokits-1801961540430001@ip015.lax.primenet.com>
Source record: 86447

I've got a bunch of older Atari software still in the package, and I'm selling it cheap:

Cyber Paint pro animation studio

Spectrum omni-color Paint Program

Cyber Studio Cad-3D 2.0

Cyber Control CAD 3D Motion Control Language (goes with Cyber Studion)

CAD-3D Font Package

Architectural Design Disk

Human Design Disk

Genesis - The Stereo Molecular Modeler

If you have an Atari you're probably familiar with some of this stuff. I don't, and I'm not. It's all still in the package. I worked for an Audio Visual magazine back in 1987 and it was sent to the magazine for review. Nobody wanted it, and I ended up with it, thinking I would be getting an Atari. I didn't.

I think it all sold for about $400 new. Anybody wants it for $50 plus $8 shipping, email me and it's yours. If not, I suppose I can use the three ring manual binders for something....;-)

Nintendo version of MULE sucked bad. The timer was always slow, so
auctions took forever. The store was HUGE! You wasted half yourtime
trying to get out of there. You could catch the mountain wumpus 6 or 7
times a round... easy money there. The sounds and graphics paled in
comparison to the Atari. In other words, they didn't even try. Shoulda
forced the programmer of that one to sit down at an Atari console for
several days and play MULE all the time.

But still, someone should come out with some of those classic Atari games
for the PC. Alternate Reality for the PC would rock.. especially ifthey
finished the series. :)

Hi Peoples, couple of questions for you all:

1) - I'm writing a program for our 8-bit users group that will display a menu of programs on the newsletter disk (yea I know there are plenty around, but I want to be different :-)) - I know how to load and run a ML program, display a text file and print a file from within a ML (6502 assembly language) program, but my problem is I haven't a clue how to load and run a BASIC program from the ML program...

2) - Are there a couple of you programmers out there that would be interested in testing my 80 column QWK offline reader for me, as I would really like some feedback from some programmers out there...

3) - Could the person that sent me the nntools.arc program please send it again as my gateway sorta lost it and I haven't had any luck in getting onto Umich to grab it from there..

If anyone can help please drop me a line at the address above...

Thanks for your time...

Source record: 86450

Sad to say, I've been using a PC as my primary system for the past year and a half and my 8-bit is getting dusty. I'd like to see my Black Box + 150 meg hard disk put to better use than just sitting around in my apartment, where I don't even have space right now to keep an 8-bit set up full-time. Includes all cables, docs, and a PC power supply for the hard disk. The Black Box is your typical late-model black box with a printer port, fast (19.2k) serial port, SCSI port, and pins to mount a CSS floppy interface. Plugs directly into a 130XE and has cable to attach to XLs. Everything works, of course. I'l like to get about $245 + shipping for it but will of course entertain any reasonable offers including trades for really cool stuff (I'm thinking like a computereyes + some smaller amount of $$$, for example). Will throw in a Super Video 2.1 upgraded 800XL that's guaranteed to work with it if necessary (some machines' PBIs are flaky).

Brent

>Adolf

Yes, it is - by boeder software, published 1993 for the Amiga and 1994 for the PC.

Even better is another M.U.L.E. clone for the PC named TRADERS - it has got that cute "alien science-fiction fun" feeling that made the original M.U.L.E. so amusing. TRADERS was published by the Swiss company LINEL in - I think - 1993.

And, last not least, there is the shareware game R.U.L.E. by a German author that is really much fun to play. Though the graphics are very basic, the gameplay is an exact 1:1-conversation from the Atari original. If someone wants to see it, please send me an E-mail, and I will mail you the game as an E-mail attachment (I think that is better than posting it to this newsgroup what perhaps might make some people get angry on me {;o))>).

I downloaded a copy of the IBM version that didn't work initially. After some fooling around with the program configuration (like turning off the "music" option, etc) I was able to get it to run and was >quite< impressed. The authors clearly spent a lot of time thinking how to recreate and expand the program, offering different types of planets to colonize, ability to modify character attributes etc. Although it didn't have the same graphical 'feel' as the atari version, it seemed very worthwhile to acquire. Unfortunately, I only have it on my machine at work, so haven't really got to play a full game.

>(or some suitable substitute) to access the CD-ROM (more or less directly)
>from the Atari 8-bit?
Since the SIO2PC program is a program written in PC assembly, it is
impossible to run it on an Atari 8-bit. What you have to do is get a PC
with a CD-Rom drive. The PC can read the CD-Rom. SIO2PC running on that
PC can access any ATR file, be it on hard disk or on CD. The 8-bit is
then connected to the PC and the ATR image is used to emulate a 1050
drive. There is a program included with SIO2PC that allows the user at
the 8-bit keyboard to send a command to the SIO2PC program to load some
other disk image file. Until there is some way of actually reading a
CD-Rom on an Atari 8-bit itself, you will always need a PC or a ST as
host to operate the CD-Rom device for you. There are several interfaces
that allow connecting the hardware to the 8-bit, but there is currently
no software to access it.

As far as the RS232 connectors go, they are NOT the same as what is used on
the AT-style serial connectors of PCs. Bear in mind that the Atari 850
came out YEARS before the AT and its serial ports. In 1983, probably
the only 9-pin to 25-pin cable out there was FOR an 850 (PC XTs used
25-pin serial connectors).

Same deal with the printer port. The DB15 on the 850 is not what one
would call "standard" today. Today computers equipped with a parrallel
port (including STs and Amigas) use a DB25 connector. If you have
a DB15 to Centronics cable, it was likely DESIGNED to work with the 850.

333. XFD vs ATR vs DCM

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-19 00:00:00 UTC
From: kendrick@zippy.sonoma.edu
Message-ID: <4dp3vd$789@nuke.csu.net>
Source record: 86362

Ok.. Here's the deal. People have made CDROM's of Atari files. These CD's can be used by the following people:

PC Xformer users
ST Xformer users
Rainbow users (at least some of them, I'm sure)
SIO2PC users
APE users

The problem is, these people can't use them:

Atari 8bit BBSes (because only PC/Mac/ST users could use the files)
Atari 8bit users (when we get CDROM's, we'll need more special software)

The reason is because the CDROM's contain uncompressed disk images. ATR's and <shudder> XFD's.

The STANDARD disk image (compressed, and splitable) for the Atari 8-bit is DCM. Now, Unix, Mac, PC and probably ST users can ALL convert DCM's into ATR's. The problem is, Atari 8-bit users CAN'T easily convert ATR's into disks or DCM's!

Ah ha! Now, first I'll "get rid of" the XFD format. ST Xformer source code is now freely available, right? Right. Let's fix it to support the more modern and safer ATR format. That way, no other program would need to support XFD, and no new CDROM will have to waste 1/2 of its space to support the few(?) ST Xformer users who are around.

Now, the good part: Let's change the CDROM's from containing ATR's at ALL to containing ONLY DCM's!

"How?" you ask? Simple:

APE supports the DCM format. This means it should be very little trouble for PC Xformer, ST Xformer, Rainbow, Atari800, and SIO2PC to support it too!

"But you can't write into a DCM file!" I thought - almost deciding to abort this post. Then I remembered "You can't write onto a CDROM ANYWAY!"

So - any new CDROM should support the DCM disk format. It's compressed, and it's the most compatible (err.. it WILL be once all of these ATR/XFD-using programs start supporting DCM's like APE already does!)

Then, everyone will be happy:

ST Xformer users (new release)
PC Xformer users (perhaps 4.0)

Rainbow users (whatever the next version will be)
Atari800 users (ditto)
SIO2PC users (ditto)
APE users (already happy!)
BBS users (EVERYone can download disk images from the online CDROM!)
Atari 8bit users (they can easily run DiskComm to convert the DCM on the
CDROM into a real disk)

Cool, huh!?

So, Darek Mihocka, Chris Lam, David Firth, and Nick Kennedy - SUPPORT DCM's!!!

-bill!

339. XL/XE version of M.U.L.E.?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-19 00:00:00 UTC
From: oscar@primenet.com
Message-ID: <4dpv7h$3v3@nnrp1.news.primenet.com>
Source record: 86368

Hey folks -

A while back I bought a copy of MULE from B&C eventhough
I didn't even have an 8bit at the time. I thought I might
run in on PCXFormer, but that never happened (and I've
yet to get a reply from Darek about upgrades to PCX - it's
been months...) Anyway, I now have an 800XL and a 1050
drive (and APE, which works wonderfully, btw...) but much
to my dismay, I've found that the copy of MULE I have won't
run on XL/XE machines. I *assume* that a version which will
do so was eventually released, no? If so, I'd like to
know where it's available (B&C doesn't seem to have it).

Thanks,
Oscar

I have a few of them... maybe 4 or 5.
I also have the rest of the setup, harddrive, MIO, cables, etc.
It all works. Got 6 XL's, and an EX. 2 MIO's (256K)
I have some other fun things... a few boxes of odds and ends... paddles, an XEP80, about 3 XF-551's, and a stack of 1050's... also 2 floppys that have digital readouts... Indus GT's I think...
Ive got power supplys for it all, and a few thousand disks with anything you can think of on them. Ive got nearly the whole collection of Antic disks, and a few hundred pounds of Antic (the atari magazine) magazines. I could see getting rid of it all if someone was interested. Oh yeah, about 20 cartridges... 2 RTime-8's in that, and 2 XL's and an XE. The others are like monkeywrench, and games. I think there is a complete Koala pad setup in there too. Anyway, sitting in the middle of a room, it makes quite a dent. I am codepoet@cnetech.com.
By the way... what is the status of Atari BBS's these days? I remember when they were IT! AMIS Arcade had just been released and we were all trying to figure out the program. The came hard drives and the MIO. Wow.. what a time.

: >UNATR and UNXFD! Also a PC program ATR2PATH which will take a
: >sparta dos image and create the mirror path of it.
:
: .
: Ok, I just started reading this thread and am confused. I understand
: that there are now one or more CD-ROMs which contain those Atari
: disk images used (I think) by SIO2PC and the Atari 8-bit emulators which
: run on the IBM. What I am wondering is: is it possible to run SIO2PC
: (or some suitable substitute) to access the CD-ROM (more or less directly)
: from the Atari 8-bit?

Yes, you can access any CD-ROM in your PC directly from the PC-MIRROR of
APE.

Loading the .ATR in one drive, and simply using a sector copier to move
the .ATR to a real disk will produce a real working diskette.

However, I think the problem above is that they dont want to use a
product like ape, and want to be able to expand .ATR files that
exist on atari disks.

I have, oh do I have Atari 8bit hardware collecting dust, have
been repairing them since 1986. I have just about any disk
drive, compute,or attachment available for the Atari 8bit
computer..including a brand new MUX system I have sat on for 2
years..I am open to offers, on what you may want or need with
shipping included.

Upgrades? If I don't have it I can convert it..ie:

400 computers stock..with 48k upgrade.
800 comouters stock..with upgrade..64 or to 256k..(pain in butt)
800XL Computers..upgradeable to 1mg
130XL Computers Stock to 1mg upgraeable to 1mg..
Forgot...1200xl's..Stock
Disk drives..
Atari 810...some with Happy. and or Archiver..
Atari 1050..Stock, double dens, some with Happy Clone?
TraK...Disk drives stock
Rana Disk Drives, the only disk drive that will format a disk
without the help of a computer attached..stock..
Indus..The Cadalac of the Atari Disk drives...
Atari XF551 Stock...
Key Pads..
Kola Pads...

If it isn't listed..then ask for it..??

I can fix what isn't working or what you have screwed up!
Provided you are not in a super hurry..If so then the price of
repair goes up..(understandibly!)...

You wish something I can provide..send me e-mail with a price
including shipping..will do my best to accommodate you..

Bob

: : Remember, when running a PR:C system that it is not a standard
: : sparta dos or any other dos RS232.COM file...you need to set up
: : the file PRC.SYS, to run instead of RS232.COM!!!!! While many
: : will tell you that RS232.COM will work fine it in fact will not!
:
: I run RS232.SYS (the 1 sector thing) and it loads the R: handler from the
: P:R:Conn and I can run IceT, BobTerm, AtarZModem, and FlickerTerm80....
: No problems.

I think the early versions of the PR had a problem w/ downloading the
code for the handler. Any device that is '850' stage 1 compliant will
automatically download its handler, regardless of what it is.

A single, small SIO command is used to 'bootstrap' the code out of
these cool devices. Allows for literally any type of device to
run on the sio bus w/ its own 6502 handler in rom.

This stage 1 SIO command downloads a small block of code from the
850/pr connection that I call the Stage 2 handler. This code then
makes the call to the device the way it wants so it can download
the 'big momma' hander, stage 3. Thats the big BEEEEEEEEEEEEEEEEP you
hear when the 850 boots.

: : Stupid question I know but why did you go this route over an 850
: : interface, when they are redialy available ect? And besides the
: : 850, kicks butt...goes to 19.2 insted of being limited to 9600b??
: : limited PR:C...!!!
:
: Again, if this question is to me, it's because it was the most readily
: available (a friend had a spare). I also assumed it was better. This
: one is known to support 19.2k. Note that ICD release earlier revision
: P:R:Conn's which I hear did NOT support >9600 bps. They denied it, though.
: (Dumbasses). Again this is only what I remember hearing a long time ago
: here on c.s.a.8.

Since when does the 850 support 19.2k? Not any 850 interface I own. The
POKEY baud divisor in the 850 handler for 9600 and 19.2 are the same. Your
terminal programn might THINK its in 19.2k mode, but the POKEY is still

transmitting at 9600.

The 850 interface technical manual clearly lists the last two baud rates as both 9600. I've been all through the hander on 2 diffrent revisions of the 850 and neither is capable of 19.2k.

Pardon the jump in...
The Atari 800 & 130XE support/output so-called "S-video". I don't know the pinouts of the special s-video connector to directly connect the Atari to an s-video input plug on a tv or vcr, but the video is the same... separate chroma output and separate luminance output.

Yes, I've seen and gotten a PC version of M.U.L.E.

I can't reccomend it though. If you're really a M.U.L.E. fan you'll have to
sniff it out. If you have OS/2 that is. I'm pretty sure it's an OS/2 game.
I'll see if I can't find it again and E-mail or post here again.

>PLEASE, HAND OVER THE SOURCE / METHOD!!

It works for me when I compile using the EMX port of gcc for DOS & OS/2. To be honest, I did it all in OS/2, so I didn't have to worry about any long filename to 8.3 conversions, etc. link65 actually compiled easier for me than cc65, but the problems were mostly user error. :)

I would assume that it would also compile fine in DOS using EMX, after making any necessary conversions, but I'm not sure. I haven't even bothered to try the binaries under DOS yet. I'm not sure which gcc version you are using on your PC, but EMX, I know, is specially designed to facilitate UNIX ports.

[I've been able to compile the UNIX Atari emulator -- in text/curses mode as well under OS/2, with EMX...]

When you say IBM PC, which operating system are trying to compile
under, and which compiler are you using? I've managed to get all the files,
CC65/RA65/LINK65 compiled under nearly every single Unix variant I have
access to - HPUX(8,9,10.0), SunOS(4.1.x), Linux(1.0,1.2), AIX(2.2,3.4)
and SCO(SysVr3) as well as AOS(4.3). Now if you're trying to do so
under MS-DOS, then you might want to really look into using DJGPP.
If I remember correctly, some of the routines I've had to change
slightly, mostly it was their read8() function, since it wasn't properly
addressing the endianess like the other files were.

361. Atari 800 System for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-21 00:00:00 UTC
From: freethinkr@aol.com
Message-ID: <4dv2od$ker@newsbf02.news.aol.com>
Source record: 86386

```
Atari 800 with two 5.25" floppy drives, software and manuals. Still works
great.
$200 or best offer. Send mail if interested.
FreeThinkr@AOL.COM
```

362. Atari 8-bit BBS list???

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-21 00:00:00 UTC
From: nathan355@aol.com
Message-ID: <4dv1jh$jq4@newsbf02.news.aol.com>
Source record: 86387

Anyone know if there is a comprehensive list of Atari 8-bit BBS's one can get a hold of? Thanks.

Nathan

363. Re: P:R:Connection R: cables..

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-22 00:00:00 UTC
From: Russ.Gilbert@apk.wariat.org
Message-ID: <1996Jan22.162800.19660@wariat.UUCP>
Source record: 86306

(Bill K. latest in series of questions about 850 modem and printer ports. I'm sure B&C computervisions has the correct cables at probably less than you would pay for the wrong ones at Radio Shack.)
(Pre written post following:)
(Discussion of 850, P:R:, MIO RS232 and Printer ports.)
I hereby decide that Rich Mier, Jim King, Michael Ellis and whoever else said/says 850 modem and printer cables are 'non-standard' are correct. I must have gotten lucky when I bought my printer and modem cables years ago at a standard (read IBM) computer store or something. I went to my local biggie computer store and the only IBM AT type cables they had were db9 female to db25 male, definitely not 850 type cables. Also, 'Computer Shopper' only lists db9 female to db25 male 'AT' modem cables. Finally, Rich Mier said he referred to a IEEE book to get his information, I only went by my memory and the cables I have in my possession. (The Atari 850 db9 male to db25 male modem cable 'pin thrus' I posted earlier are still correct however.)
I apologize if anyone went out and bought a 'AT' modem cable and it didn't work. The fact that the 9 pin end is the wrong gender ought to give a clue. I'm not even going to get into the printer cables at this point.
So, Rich Mier says an adapter for the 'AT' modem cables would change pin 1 to 2, pin 2 to 4 and pin 4 to 1, in addition to making the gender change.

>it a little quicker.

S.A.M. (software automatic mouth) was developed by Don't Ask Software.
The "Reciter" that came with it spoke English text out of a plain
ASCII text file while the S.A.M. kernel itself used a phonem language.
The program was released in 1981 (I think), and very probably it
cannot be bought anywhere any more. I've got a copy and a manual, but
I really do not very much like to part with it. If someone really
urgently needs to use S.A.M., he (or she) may contact me via E-mail,
and we'll see if we find a solution for the problem.

I had an XL and was able to run MULE by loading the Transformer.
Remember to hold down the Option key as you boot, to disable the
built-in BASIC.

The missing joystick ports could also be giving you problems. Try
holding down on fire button on one (or both) of the sticks as the game
loads. I recall having to do something like that, I think. I also
remember using the paddle controllers in the auctions - the ones that
once came with the 2600.

Anyhow, it *will* work, unless the disc is fried.

Please tell me you're joking. Wouldn't this cause problems for the two
or three programs that actually use the console keys?

Chris Lam (lamcw@aston.ac.uk) writes:
: kendrick@zippy.sonoma.edu (William Kendrick) wrote:
:
:
: ;Ah ha! Now, first I'll "get rid of" the XFD format. ST Xformer source code
: ;is now freely available, right? Right. Let's fix it to support the more
: ;modern and safer ATR format.
:
: I kinda like the so-called XFD (I call them 'standard' images, well, I would
: wouldn't I) because they are exact carbon copies of the original disk.
: Pure, if you like. The conversion from ATR to XFD is trivial; you chop off
: the first 16 bytes. Standard images to ATR is not so trivial since you need
: to create the header.

It also is an excersise in stupidity to 'image' a disk in such a formless
blob. In a real disk drive there is a disk controller and OS to
identify and report the size of the diskette to the operating
system based on the low level format.

With a blob format like XFD, the only way to determine the size of a
disk is with arithmetic. If you add a byte to the end, or a few, as
can easily happen with data transfers, the math gets messed up and you
have to resort to just 'guesstamating' the size of the disk.

Ive seen plenty of XFD's that are trashed this way.

: ;Now, the good part: Let's change the CDROM's from containing ATR's at ALL to
: ;containing ONLY DCM's!

Since there is no batch ATR->DCM converter, your asking a great deal
at the moment. Compressing the throsands of ATR images with an 8 bit
(or 2) running Disccomm3 would take forever and a day.

So... who wants to write the PC Atr->Dcm?

<Why is everyone pointing at me???> ;)

For what it's worth, I got CC65, RA65, and LINK65 compiled/working on a Sun Microsystems SPARCstation oh, about five years ago now... I had to do a LOT of hacking to resolve case-sensitivity, unavailable-Sun-RTL-routine, and other problems... I had the advantage at that time of more-or-less direct (via e-mail) contact with John Dunning, CC65 author...

As it stands now, I have John's actual floppies, for what they're worth... I can't really read all of 'em because some are double-sided and I don't have a double-sided (I presume XF551) drive...

In any case, I'd be willing to try to help you get LINK65 going on the PC, though I warn you I have no PC-specific software-building experience...

From: askwersk@mit.edu
Message-ID: <askwersk-2201961000220001@yavin.mit.edu>
Source record: 86394

I'm trying to work on the serial port.

I have a little program:

```
10 DIM A$(50)
20 OPEN #1,7,0,"R1:"
30 PRINT #1,"AT"
40 CLOSE #1
50 OPEN #1,6,0,"R1:"
60 INPUT #1,A$
70 PRINT A$
80 CLOSE #1
```

It breaks with:

ERROR- 135 AT LINE 30

When I change the 7 in 30 to 13 then instead it says..

ERROR- 154 AT Line 60

I cannot even find 154 in the error code listings. Can someone please explain to me how to send and recieve to a modem connected to the 850 interface?

I used to program on an 800 but it broke, then I bought an cheap used 800xl and an 850 interface but the previous owner forgot to include the 850 docs.

Could you be a bit more specific? What program are you using?
What printer are you using? What interface are you using? What's
going wrong? Is it double-spacing everything? Is it printing
everything on one line? Is every other character in italics? Is it
ignoring line feeds? Is it printing passages from the Necromonicon?
Details!!

```
(Adam S. asks about a simple term program for his 850.)
error 154 means you didn't have the channel set for concurrent input
and output, which is done with a xio command. You gotta have a
suitable 850 R: handler installed, which I don't think you mentioned.
And finally, here's a little program from my old Avatex book that
works.
10 CLOSE #2:OPEN #2,4,0,"K:"
20 CLOSE #3:OPEN #3,13,0,"R:":REM CONCURRENT MODE
30 CLOSE #4:OPEN #4,8,0,"E:"
40 XIO 34,#3,192+48+3,"R:"
50 XIO 40,#3,0,0,"R:"
100 STATUS #3,AVAR
110 IF PEEK(747)=0 THEN 200
120 GET #3,CHAR
124 IF CHAR=0 OR CHAR=10 THEN GOTO 200
130 PUT #4,CHAR
200 IF PEEK(764)=255 THEN GOTO 100
210 GET #2,KEY
220 PUT #3,KEY
240 GOTO 100
(Hope I typed that correctly.)

387. Where to find software for the 800xl?

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-22 00:00:00 UTC
From: ted@aros.net
Message-ID: <4e165s$k0j@news.aros.net>
Source record: 86401

The title says it all...where do I find some old games for the 800xl?
I just got an emulator for the PC and I want to play some of the old games I
used to love so much on my old 800xl (which I stupidly sold years ago). I
particularly remeber a game called Sir Galahad and the Search for the Holy
Grail. Anybody remember that one? Or where I could get it? please respond
to me via e-mail, for I do not frequent this group. thanks in advace

Hello. using Ice-Term, and sometimes telnet to various chat systems thru the internet. One type of system is known as Majornet. A regular bbs with multiple chat lines, sorta like IRC. well i sometimes download and capture stuff, and when i look at it by viewing it with text editor or something, i see lotsa ansi codes. Any possible way (besides goin thru the whole file and manually deleting each ansi code sequence) that i could modify it so it would be readable ascii?

please reply..

391. Re: XFD vs ATR vs DCM

kendrick@zippy.sonoma.edu (William Kendrick) wrote:

;Ah ha! Now, first I'll "get rid of" the XFD format. ST Xformer source code
;is now freely available, right? Right. Let's fix it to support the more
;modern and safer ATR format.

I kinda like the so-called XFD (I call them 'standard' images, well, I would
wouldn't I) because they are exact carbon copies of the original disk.
Pure, if you like. The conversion from ATR to XFD is trivial; you chop off
the first 16 bytes. Standard images to ATR is not so trivial since you need
to create the header.

; SUPPORT DCM's!!!

Well, with Rainbow you can use Disk Communicator 3 under emulation
to create DCM images and also to uncompress them. It's slow but it's nice way to
do it. Otherwise there's the DCMTOATR utility.

;Now, the good part: Let's change the CDROM's from containing ATR's at ALL to
;containing ONLY DCM's!

Someone send me a clear, technical note on DCM compression and it may become
an integral part of Rainbow!

; Rainbow users (whatever the next version will be)

Version 1.1 and it released this week :)

Darrin Smith <darrins@cyllene.uwa.edu.au> wrote:
>The local junk shop has both. Which should I get?

Depends what you intend to do with it. The 800XL has the Parallel
Bus in the back, which is what is generally used to hook up hard drives,
Black Boxes, MIOs, etc. The 65XE doesn't. However, most 800XLs have a buggy
version of BASIC which can be remedied by ordering a Revision "C" BASIC
cartridge from many dealers (B&C, I think, has them). This is only a problem
if you intend to do much BASIC programming.

Some 800XLs have socketed chips rather than soldered ones, which makes
for easier repair and expansion. All 65XEs, I believe, are soldered. The
only real downside to the 800XL is that the keyboard's feel isn't that great;
I don't know how the 65XE's was (the one with the XEGS was miserable).

In short: The 800XL.

No. You'll need to buy one or build one (B&C has them), See the WHAT
IS AN 850 INTERFACE thread for details.

>So... if it ISN't a standard cable, where can I get one, and/or is it
>very easy to build? <gulp> The P:R:Conn. manual has a pin-to-pin listing,
>so I wouldn't need the description on how to build it. BUT again, I wanna
>just go to a store or something and have one pre-made.

I built one by purchasing a 9-pin to 9-pin cable and hacking one end off.
On this end I soldered on male 25-pin connector with the correct wires
breaking out to their respective pins.

399. Atari 800/XF551 hardware probs

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-23 00:00:00 UTC
From: jay_eckert <jay_eckert@intersolv.com>
Message-ID: <3104EBB6.799B@intersolv.com>
Source record: 86324

I've finally decided to break out my Atari 800 and XF551 disk drive after six years of gathering dust. I've got two hardware problems.

First, when I turn on the 800 w/ or w/out a cartridge, I get a black screen on the TV. I think I used to know what it might mean, but now I've got no idea.

Second, there's something funky going on w/ the power connection to the disk drive. The disk drive will not go on unless I jiggle the power cable in the drive's jack. Sometimes I can get the drive to spin for the requisite couple of seconds, sometimes it only blinks.

Can anyone help me out with these two problems? I'm dying to load up Shamus, Frogger, Phobos, Temple of Apshai (if I still have it). I wonder if the data on the disks is still there? Heck I'd like to fiddle w/ the Star Raiders or Gorf cartridges!

Thanks,
Jay

```
updated 01/23/96
----------------
I have the following Atari 8-bit software and hardware for sale or
trade.

Everything is sold as is. Unless specified, all items have been
tested and are in perfect working order.

Buyer has ten (10) days to send payment, and pays all shipping
costs, which will be sent via U.S. Postal Service. The shipping
cost depends on both the weight of the package and the distance
that it is traveling. Buyer has the choice of either first class
or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order,
drawn from a U.S. bank branch. Canadian buyers must send a Canadian
Postal Money Order, payable in U.S. funds. This is the only way I
have found to deal with my friends to the north (my bank is very
picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:
---------------------
Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 6.00 Basic
$10.00 Delta Drawing (Spinnaker)
$ 7.00 Eastern Front: 1941
$10.00 Kids on Keys (Spinnaker)
$ 5.00 Pac-Man

Loose cartridges with manual:
$ 6.00 Star Raiders

Cartridges with box and manual:
$10.00 Eastern Front: 1941 (also includes poster map)

HARDWARE:
```

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 600XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 600XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$24.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #4

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 130XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$59.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

As it syas above: Closet cleanout has finally made me realize that my first computer would be better suited in someone else's hands. Last time I had the machine working, it worked fine. I believe it has 48K, plus a nice aftermarket joy stick, 810 drive 850 i/f, cables. About 50 or 60 disks of games, utilities, etc.... All I ask is you pay for shipping. Should be about $15-$20 depending on where you are. (I'm in San Diego). First person to respond and agree to above get it all, though considering it's free, if you could prepay for shipping, I'd appreciate it.

Go for it, there may be some games you have never seen before.

To the best of my knowledge, there was never a version for the XL/XE. It is possible to play it on one though, if you use the Translator or FIXXL. In that case, there is still the problem of the 3rd and 4th joysticks. Since the ports are scanned when you start the game, if you are not holding the buttons on the first 2 joysticks, then 3 and 4 will be selected by default and you have to start again. When you start the game, hold down the buttons on the joysticks you're using. Release the buttons in order, 1st joystick, then 2nd joystick for a two player game. You can play up to 3 players if you use paddles on the second joystick port only. These buttons also have to be held and released in order. On the whole, it's easier to pick up a 48K 400 or 800 to play, and the game is worth it!

It just takes a simple machine language program to turn Basic on or off.
The BASIC.OFF program could be used as AUTORUN.SYS (or *.AR? on Mydos).
I could try to find these and uuencode them.

Humm, have you tried reseating the PCA boards on to the
Main board? Could be just poor conections having been setting around for
so long.

Well, this is the classic problem on the XF551's. Next to go will
be the SIO connectors (Intermittant). The problem lies in the way the PC
board is made, only Single Sided and NOT plated through holes. Wiggle or
bump the connectors and the solder breaks the foils. It is repairable, just
need someone that is handy with a screwdrive (to take it apart) and a
soldering iron. If you do take it apart to fix the power connector, replace the
eyelets that hold the SIO connectors to the PCA with small screws and nuts.
4-40 screws about 3/8" long if I remember correctly.

Rich Mier

You can get 'AT' cable with the correct gender, I was just
refering to a particular 'Pocket Modem' that someone brought to me and
wanted to connect it to his P:R:C. (A VERY good friend or I wouldn't
have done it.) One thing to look for is that the DB9 end is NOT a
moulded connector, but is one that can be taken apart.
Another short note on the pin out of the Atari RS232 port:
The 850 Interface came out just BEFORE the Standard for the DB25 to
DB9, RS232C cable. That's why it is slightly different. Also, I believe it
was changed to make it easier for company's to use flat ribbon cables
with pressed on connectors on each end. Not too sure about this.
About the Printer cable, Atari's DB15 to Centronics 34. I have
NEVER seen any other one. Atari is the only company that ever use this
cable so if you find one, it should work.

I have an Atari Light Pen, unused and still in the box for
$10. Also an 850 interface for $25. Also PR Connectors with
software and manual. $25 for 2.
I have a hardware game called PQ The Party Quiz Game by
Suncom. I have never used it and it's still in the box. It has 4
controllers, each with 4 large buttons, all 4 controllers leading
to an interface that plugs into a joystick port. $5.
Also an Adaptec 4000a controller. $30.
PrintShop disks and manual in original box. $5.

.

I am pretty sure that you don't need to do all this. We load it on
an 800XL without the Translator disk. We do have to: 1. hold down
the Option button (to get rid of BASIC) and 2. use the joystick key
I mentioned in a previous post.

If this is an Atari 800 (not an XL), and you can ship it for $20 or less
(regular old U.S. mail is fine), then I'll take it and can guarantee
that it'll find a loving home here in Pennsylvania. If so, e-mail
me and you've got a deal.

The 800XL physically more solid and potentially easier to upgrade (if its RAM chips reside in sockets). In addition, the 800XL has a parallel bus connector on the back AND a cartidge slot on top. If you plan to attach an MIO or Black Box you will want it set up this way; on the 130XE and 65XE you need a "enhanced cartidge interface" adaptor to use the parallel bus, and many times you lose your cartidge slot this way.

On the downside, the built-in BASIC on many 800XLs is Rev. B which is buggy when SAVEing files. But then, if you're programming in BASIC on a 2MHz machine, you're a sadist anyway ;-).

Hope this helps...

I was wondering about the original post when I read it, since we
have M.U.L.E. running on an 800XL here. I just checked and I do have
that disk marked as requiring the XL "joystick key"- this is a little
doo-hickey that must keep that fire button pressed. The joystick key
is nothing more than the end of a joystick cable with an electrical cap
on it- it must have the fire button wire crossed with the ground.

> use it as a 'touch' mouse?

>Sounds neat to me! :) Ive always wanted one of those $90 touchpads.

Great idea! I've tested the PADDLE(x) values of my Commo koala which simply correspond to the resistance values HOR and VERT, and they match the range of Commo paddles (I think that the Atari version of koala pad matches the range of Atari paddles :o)))))>). The problem may be simply the same as the one I had when I tried to use the Commo koala on the Atari: The distribution of values on the pad isn't linear but logarithmic, and a "pad driver" for the PC would have to deal with that. That means in effect, the resolution won't be the same on any section of the pad.

But, on the other hand, Steven: Do you think it's THAT easy to write a mouse driver that simply interprets two resistance values from the joystick port? I mean, it would have to comply with Windows (gulp!) if the whole thing should be of any sense, and who in the world, being an upright, healthy, well-minded Atari-8-bit-user would dare to write a WINDOWS DRIVER...?

;o{))))>

(Please don't mind my English again; I'm already 35 and still learning...)

You do mean masochist, don't you? :-)

But I'd rather program in Basic on an Atari than on a faster computer,
partly because on the faster computers it's easier to use languages
such as Perl.
(I'm still toying with the idea of making a partial Atari Basic
interpreter for Unix, but it's on the far back burner.)

Maybe he said "so-called" because the Atari 8-bits were designed before
the S-Video standard, and they don't have S connectors.

I guarantee it does not. One of the reasons is the scanning of the joystick ports. Since the XL/XE has reassigned the 3rd & 4th ports to something else, it tries to select them instead of the real joysticks unless you're careful. M.U.L.E. was on of my wife's and my favorite games and I always pulled out the 400 to play it because it was such a hassle on the 130XE.

When I boot M.U.L.E. on my 800XL with the Option key held down, I get the
message "Remove ROM at $C000".

> Of course, my 130XE has the UltraSpeed+ OS, so if it WAS 400/800 only,
> it's as simply as flipping a switch to make it work... :) But it
> wasn't, I'm not aware of two versions, and the one version that's out

>
>
I have the Ramrod XL in my machine, so at the flip of a switch, I can run
the original XL OS, the Omniview XL OS, or the Omnimon XL OS. Neither OS
makes my copy of M.U.L.E. happy. I have to use the translator, and I have
to hold down the joystick buttons as mentioned in previous post.

My theory is that EA silently changed the loader on the M.U.L.E. disk to allow
XL's to boot their games. I must have an earlier loader. The odd thing is
the reference card that came with my copy of M.U.L.E. says to hold down the
Option key when booting on an 800XL, even though that doesn't work...

I always meant to hack my copy of M.U.L.E. to ignore joystick ports 3 and 4.
It can't be that hard...

I disagree! It really depends on what you want to do. I wouldn't write
any grand applications in interpreted BASIC on the Atari 8-bit platform
at this point, but it can be great for small jobs, like embedded control.

Well, there's two things you can do... one which I'm not sure of..

1. Get an RF adapter for your TV.. teh Atari will work with either a TV or monitor(nice and handy for video productions, cause you don't need any TV card :)

2. Find schematics for an 800XL power supply and build one. It will work with a 130XE just fine, and it's the best replacement for the 130XE "brick" power supplies which become just that.. a brick.. once they die because all of the parts inside are encased in epoxy.

: only assume has the stick trigger permanently crossed). I will admit that
: I have not tried loading without the joystick key, and not having tried
: removing the key once the game has loaded (with it in you are
: obviously limited to 1 human player), but M.U.L.E. does run on the
: 800XL.
: .
: Something which does ocurr to me is that the 800XL had (at least) two
: ROM revisions: B and C. Maybe that makes a difference?

But didn't the ROM versions determine which BASIC the machine had? My
800XL has revision C, and I get the "invalid ROM at $c000" or whatever
that message was. I haven't tried booting up the translator,
though; actually, I don't even *have* a translator because I also
have an 800 which I use when I have compatibility problems.

I would be curious, though, to know how I can get M.U.L.E. to run on
the XL; it's a bit of a hassle to move everything to the 800 (though
it is connected to the 25" TV in the living room, giving us a large
screen experience!).

A better idea would be a real C compiler for the Atari that is shareware.
I played with Deep Blue and Ace and the other C compilers for the Arari,
and found in each and all cases that the XE or XL cart in FAST mode was
faster. Sad that a machine as great as the Atari never got a good
compiler. I would go as far as saying that that was the Primary reason
Atari stoped where it is now. With a good C compiler, (or pascal) the
programer junkies like myself could have written demanding applications,
forceing the advent of faster chips... perhaps user instaled CPU upgrades.
High-speed 6502's do exist now, of coarse, but its a little late.

I am posting this message for a friend without Internet access.
If you send me e-mail, I will pass it along to him. -- Basil
------------------------------cut here-------------------------------------
ATARI ST/8-BIT

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. I will refund
your money on any disks or cartridges that do not work.

Best offer applies to all.

Atari ST 3.5" software:
E-Z Track MIDI Sequencer (new, unopened) (2 of them).....$5
Personal Pascal *.....$4
ST Key *.....$4

Atari 8-bit software:
Atariwriter (cartridge) *.....$4
Home Filing Manager (disk) *.....$4
Pilot language (cartridge).....$4
Print Shop (disk) *.....$5
Telelink (cartridge).....$4
Turtle Tracks (disk).....$4

The above prices do not include shipping.

Minimum purchase is $12 worth for Atari items. The shipping cost depends on
how many items you want, if they have boxes, and how heavy they are. For
items that can be sent with the standard 2 lb. US mail book rate, shipping
is $3. For everything else, I will weigh the items and call UPS to get a
shipping cost for you. I will only ship within the continental UNITED STATES.
No exceptions.

Very few prices are set in stone. The more you buy or the more you
have to trade, the more interested I will be in making the transaction
worthwhile for both of us.

Thank you,
Randall

: > use it as a 'touch' mouse?
:
: >Sounds neat to me! :) Ive always wanted one of those $90 touchpads.
:
: Great idea! I've tested the PADDLE(x) values of my Commo koala which
: simply correspond to the resistance values HOR and VERT, and they
: match the range of Commo paddles (I think that the Atari version of
: koala pad matches the range of Atari paddles :o))))>). The problem
: may be simply the same as the one I had when I tried to use the Commo
: koala on the Atari: The distribution of values on the pad isn't linear
: but logarithmic, and a "pad driver" for the PC would have to deal with
: that. That means in effect, the resolution won't be the same on any
: section of the pad.

True, but is the linearity of the device controlled by the electonics or
the touch medium itself? If its being translated somehow by a log, then
simply going direct to the resistance of the medium might make it
linear again?

: But, on the other hand, Steven: Do you think it's THAT easy to write a
: mouse driver that simply interprets two resistance values from the
: joystick port? I mean, it would have to comply with Windows (gulp!) if
: the whole thing should be of any sense, and who in the world, being an
: upright, healthy, well-minded Atari-8-bit-user would dare to write a
: WINDOWS DRIVER...?

Actually, I don't think it would be that difficult, but the great thing is
i know there are a few 'joystick-as-mouse' drivers already available, possibly
with source ;) A few simple mods to the x/y paramaters might make it
go! :)

Steve 'Gonna dig out that C-64 koala pad right now!' Tucker

```
------------------------------------------------------------

Rainbow - The Atari 400/800/800XL Emulator for the Apple Mac

------------------------------------------------------------

January 1996.

Dear Users,

Version 1.1 of Rainbow is now ready. You can try out the new
demo at

http://www.aston.ac.uk/~lamcw/emulators.html

or by FTP from

ftp.amug.org in info-mac/app

and related mirror sites.

The demo version has a new speedometer which measures emulation
performance. The full shareware version has these NEW features:-

- better sound emulation
- faster large view displays
- NEW FULL SCREEN display!
- speedometer
- and more!

Registered users please email me with reg. number and password for
free update. If you would like to register for the full version, see
textfiles in the demo.

Regards,

Chris Lam,
Rainbow Keeper.

...
Yes, I am ALMOST sure that the OS ROM did not have a version change
of any significace after the 1200XL. Down to the last of the XEs, the
self-test code continued to have the 1200XL function keys, etc. on it,
though there was no way to "test" them. I don't think there were
revision designation changes at the complete letter level. When
speaking of revisions A, B, and C in the post-XL days we are usually
speaking of BASIC ROM revisions. You real oldtimers can correct me,
but I believe there were OS versions A and B for the 400/800. In each
case, my memory is that versions A of OS and BASIC were short-lived
and rare, with the main production being version B of both. B BASIC
got into most of the XLs, C BASIC in a few XLs and most if not all of
the XEs. There were cosmetic OS changes at a very minor level (like
changes in the secret message of the Self-Test ROM which is typed out
if the keyboard test is left alone long enough, and whatever it took
to handle the Missle Command boot options in the XEGS. Anyway, these
variences in the way people describe M.U.L.E. working sound like there
really were some differences in later releases of M.U.L.E. I've never
gotten mine to work on XLs or XEs, though I didn't know about the
tricks some of you have mentioned.

I'm in the same position with my copy, it's one of the few things I paid full price for, not scrounging out of the discount bins. There was also a nifty handler written for it and published in Antic or ANALOG which installed a V: (voice) device in BASIC. Then standard BASIC device output statements could be used to produce speech in any program. Anybody know what issue of what mag this was in?

>that is not a Synapse game.

There is a good reason that that wonderful sound is the same in both games. They were both written by the same guy. I'm blanking on his first name, but the last was Williams, I think. He's a real nice guy. Salmon Run was an APX game, written for the 400/800. APX was the Atari Program Exchange, a nifty program the early Atari did where non-professional programmers were invited to submit programs for distribution by Atari in simple packages at discount prices. The package included a bio of the programmer, and often his/her name, address, and phone number. Salmon Run was the second game I ever got, and it was on boot cassette. I couldn't get it to load on my 800xl, so I called him up. He was puzzled, too, as he didn't have a XL. Of course, it was the old newbie problem of not understanding about holding down OPTION during boot to disable Basic. I finally sort of figured that out (for a cassette, it was both OPTION and START that needed holding), and called him back. He was relieved that his program wasn't useless on XLs. The game is still one of my favorites. I later transferred it to a menued boot disk.

My MAC/65 cart supports DDT. Just type DDT into the editor to
invoke it. I must say, however, that I have version 1.1; it's
possible that old versions didn't support integrated DDT.

Will Dwinnell (predictor@delphi.com) wrote:

: .
: I know that M.U.L.E. works on the 800XL- we run it that way all the
time.
: The two special things we do are: 1. press down Option (to get rid
: of BASIC) and 2. keep a joystick key in joystick port 2 (which I can
: only assume has the stick trigger permanently crossed). I will admit
: I have not tried loading without the joystick key, and not having tried
: removing the key once the game has loaded (with it in you are
: obviously limited to 1 human player), but M.U.L.E. does run on the
: 800XL.
: .
: Something which does ocurr to me is that the 800XL had (at least) two
: ROM revisions: B and C. Maybe that makes a difference?
Ziggy writes
;But didn't the ROM versions determine which BASIC the machine had? My
;800XL has revision C, and I get the "invalid ROM at $c000" or whatever
;that message was. I haven't tried booting up the translator,
;though; actually, I don't even *have* a translator because I also
;have an 800 which I use when I have compatibility problems.
Actually, there was an early modified OS ROM/copy device that used the
previously free space from $C000 to $CFFF. Software houses just looked
for
data in this area & assumed you were going to steal their software. Of
course with the advent of the XL OS, none of this stuff would run. The
BASIC, and essentially all other 8k carts <If you want the exceptions, I
only know of two!> use the address space from $A000-$BFFF.

450. FileSelector and my Home Page

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-26 00:00:00 UTC
From: kendrick@cs.sonoma.edu
Message-ID: <199601260655.WAA17956@zippy.sonoma.edu>
Source record: 86225

FileSelector v.0.4 has been uploaded to UMich. It's currently in the "New"
directory. I'm supposing an older version is still in there (why hasn't
it been moved to the appropriate place!?), so I had to name the latest copy:

filesel.arc.v.0.4 <- the ARC (program, docs and sourcecode)
filesel.readme.v.0.4 <- brief blurb about the program

To sum it up REALLY quickly, it's a menu-based subdirectory navigator for
MyDOS which allows you to read text files (ASCII, Unix, ATASCII; with
page-up), execute binary programs (load stuff), and it supports APE's
PC-Mirror subdirectory system (although it's a little flakey at the moment).

It allows for configuration files in each subdirectory which let you set the
screen colors, set a font for the screen, set filter masks so you only show
certain types of files, set the screen's title, and have the listing sorted!

Joystick or keyboard control. Very compatible. Documented source code
included! Go get it! (Or e-mail me if you have trouble).

I think a copy of v.0.4 is also up at James King's FTP site.
ftp://ftp.xmission.com/users/j/jeking/8bit/

And like I said, it's at UMich:
ftp://atari.archive.umich.edu/atari/8bit/New/

Now for the home page part! My home page has been updated! Some new graphics.
New format (tables! but still Lynx compatible!). More humorous files. And
best of all!

The games, animations, and guestbook are all back online! Whee!

So, go check out my home pages:

My page: http://zippy.sonoma.edu/~kendrick/
New Breed Software's page: http://zippy.sonoma.edu/~kendrick/nbs/

Thanx! All comments always appreciated! (Or just e-mail me if you want to
chat - esp. about Atari! :))

-bill!

451. Atari Equipment MUST SELL!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-26 00:00:00 UTC
From: starfleet@bbs.freebbs.com
Message-ID: <TCPSMTP.16.1.25.-10.1.4.2713246854.4021@bbs.freebbs.com>
Source record: 86226

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one. Will also trade for IDE Hard Drives.
MAKE OFFERS!!

Someone had offered me $100.00 for the ATR8000 and dual drives, but never hea
rd back from them...

It sounds like what you need is a filter program that reads in a text file,
parses and discards all ANSI sequences, and outputs the result.
Unfortunately, I know of no such program.

Your next best bet is to do a search-and-replace for the most common
ANSI codes, then go through and delete the rest by hand.

Is there any way to run your host in straight ASCII mode?

457. MAE 1.0

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-26 00:00:00 UTC
From: jharris@cybergate.com
Message-ID: <310945a9.6010840@news.cybergate.com>
Source record: 86232

Thank you to everyone who has been patiently waiting for the MAE assembler 1.0 release. Things are getting very close to being ready, and I think the results will be well worth the wait. The project really snowballed as I kept wanting to improve "just-one-more-thing", and now after some really major changes, it's almost finished. Special thanks to Glenn Saunders and Kent DeGroff, who sent Shareware donations even though I hadn't officially asked for them. This was largely responsible for providing the motivation for all the extra work. Special thanks also to Itay Chamiel who provided me with high-speed 64 column and 80 column text drivers.

Here's a partial list of what has been done recently:

New memory configuration which uses up to three banks of extended RAM, doubles the symbol table size, ups the source buffer to almost 40K, and reduces MAE's main memory usage to only $B700-$BBFF. The region from $4000-$7FFF in main memory is now completely free, and you can assemble object code into memory there, or whatever else you might want.

MAE comes with 64 and 80 column software drivers that work on a Gr.8 screen. Both drivers are _far_ quicker than working with the XEP80, and if your banked RAM supports ANTIC banking, it won't reduce the size of your source text buffer at all! (But will use $5600-$7FFF of the above mentioned free memory area). The 64 column mode in particular is very nice looking on a monochrome or split-video monitor.

The native 40 column mode, and also the 64 column handler, both support horizontal scrolling out to 80 column line widths.

Completed 24-bit support, 65816 opcodes, and 16-bit operands in the debugger.

Everything is faster. Assembly speed is up to twice as fast, the editor is faster, and the debugger is significantly faster in some operations.

Storage requirements for local labels have been reduced, which saved an additional 25% on the symbol table size in some of my source files. This will make it easier to assemble larger source files without reconfiguring memory.

Macro processing has been completely rewritten, and is much more flexible. It now passes parameters as full ASCII strings, which makes a huge improvement over what you can do with macros.

After marking a block in the editor, you can press Ctrl-; to comment or uncomment the lines. (It adds or removes ";" characters at the start of each line).

The editor can move labels up or down to adjacent lines, or move lines up and down relative to surrounding lines.

Many more new features and bug fixes. I'm really happy with the way it turned out.

(R. Cortese talks about modifying a TRS joystick to work with the A8.)
And he also talked about the original topic was about the Koala touch
tablet. Anyways, confused as usual, There ain't no capacitors or
resistors in a A8 joystick. A A8 joystick is just a bunch of contacts
to four wires and a ground. A digital joystick entirely. Now the
paddle controller I never took apart. Looking for further clarification
to my muddied mind, not countering what Rick is saying.

459. ANALOG & Antic Buy, Sell, Trade

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-26 00:00:00 UTC
From: Russ.Gilbert@apk.wariat.org
Message-ID: <1996Jan26.160653.25338@wariat.UUCP>
Source record: 86234

I'm looking for ANALOG issues 1,3,4,5 and 'Compendium' and
'8-bit Extra'. If anyone would be interested in selling one,
some, or all of these, I'd like to buy them or trade for
magazines in next two paragraphs. I'll offer $3 each for the
magazines and $5 for the extras. I'll add $1 each for shipping
handling. I would like to pre-pay the shipping and COD or
post-pay the rest.
I have 60 extra ANALOGs from #18 (4/84) to the last issue
#79 (12/89) in various condition from fair to excellent (all
completely readable and have very few marks (no highlighting)
covers apart on some.) Don't have extra #59.
I have 66 extra Antics from 8/84 (Vol. 3 #4) to 7/89 (Vol. 8
#3) in good to excellent condition (missing 8/85, but also
have 2&4/84 and 9/89, 10-11/89, 2-3/90, 4-5/90, 12/90 (STart)
& 1/91 STart.) I'd like to hear from people that would like to
buy or trade for my extra ANALOGs and Antics. A little
history:
ANALOG published their first issue 1-2/81 (#1) and their
last issue was 12/89 (#79). They were supposed to be
bi-monthly at first (it took 32 months to publish the first
12 issues), then they went monthly pretty regularly until
10/88 when there was a six month gap when LFP bought them.
Antic started 4/82 (Vol. 1 No. 1) and was bi-monthly for
the first year, until Vol. 2 No. 1 (4/83), when they went
monthly. Antic published monthly pretty regularly until 9/89
and went bi-monthly from 10-11/89 to 6-7/90 (Vol. 9 #2, last
issue of separate Antic.) Antic was then put as a department
in STart for four months and then STart published their last
two combined ST and 8-bit magazines 2-3/91 and 4-5/91, which
was the last issue of both Antic and STart. There were about
94 Antics, including the Antic section of STarts.

The only other thing I can think of is the power supply. Inside
it has a Fuse that blows quite easily. You have to litterly break the case
open to get at it. BTW, the power supply for the XF551 is the same output.

Come on people, speak up. I'm drawing a blank on this 800.
Give the guy some input.

Yep, I've got one working. 5 1/4 is drive 1 and
the 3.5 is drive 2. The only problem I've run into is overheating
if I put the top of the case on. Also need a fan on it if I use
it to BackUp my Hard Drive.

Yikes! What a scary thing to write; to me, it's always been the
advent of C that went a long way toward making computers Just No Fun Anymore.
I mean, it cranks out bloated, sluggish code that necessitates buying a
higher speed machine -- that's always a feature I wouldn't want my software
to have.

Besides, who needs C when you've got Action!?

The XL series used a modified 1200XL OS (they added support for built-in BASIC and the PARALLEL BUS) but it didn't change during the life of the 800XL. The BASIC, however, did. Rev. B of built-in BASIC would add 16 bytes to files every time you SAVEd a program. Rev. C fixed this.

Does American Techna-Vision still have these? According to my last catalog
they sent, you can buy an SIO cable for $1.50 or 10 for $10.

Their number is (510) 352-3787.

: Yikes! What a scary thing to write; to me, it's always been the
: advent of C that went a long way toward making computers Just No Fun Anymore.
: I mean, it cranks out bloated, sluggish code that necessitates buying a
: higher speed machine -- that's always a feature I wouldn't want my software
: to have.

I've been saying this for a long time.

As hard drives and memory get cheaper and cheaper, programming skill and artistry decline. As long as the answer to a software dilemma remains "throw more memory/disk space at it," there will be no attempts by the programmer to make the code more efficient and take less space. Faster processors make inefficient code less noticeable (if at all) for most applications; larger hard drives make it possible for what used to be a 2 MB application to require 10 MB with only slightly more functionality.

That was one of the beauties of the systems of yesterday--while the limited or nonexistent upgradability of them was a solid barrier, it was also a challenge to the programmer. How can I get all of this to fit on one disk? How can I make it all run in 48K? And how can I optimize the code to make a slower processor happy?

You can *not* tell me that a game requiring 4 MB of RAM and 9 MB of hard drive space is 100 times better than the old Atari game which uses 1% of those resources. Why not? Because the Atari programmers knew they had hardware limits, and they performed near-miracles in order to make the software work. In other words, they tweaked the software to run under the hardware, not vice versa.

When the answer to *everything* is "get a 32MB Pentium and the problem will go away," then the art and science of programming becomes just drone work. True wizardry is, IMO, squeezing the absolute max out of available resources--and trying innovative techniques to work within those resource limits before quickly giving up and saying "it needs a 32MB Pentium to run."

Throwing more hardware at a problem, for anything except as a truly last resort, is (IMO) a lazy cop-out.

Can't seem to get the computer itself working. I took everything apart
and reseated it all and I still get the black screen of death. What a
shame. I wonder if its all over for the little guy. In dog years he's
probably about 98 years old.

472. Dual drives

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-26 00:00:00 UTC
From: halliwee@ts436.dyess.af.mil
Message-ID: <31092E0F@syrinx.dyess.af.mil>
Source record: 86247

Does anyone know if CSS' XF551 Dual Drive upgrade will work with combination 3.5/5.25 mechs? There's a single card-edge connector on the back of these things, with a short ribbon cable connecting the top and bottom controller boards.

473. Search for Touch Tablet / Koala Pad

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-26 00:00:00 UTC
From: ricortes@Garg.Campbell.CA.US
Message-ID: <7BNBiD1w165w@Garg.Campbell.CA.US>
Source record: 86248

```
:Peter Schmitz (peter.schmitz@tronic.de) writes:
: Hello, fellow-8-bitters!
:
: My good old Atari is still searching for a Touch Tablet or Koala Pad.
;This gives me a interesting idea, assuming these work by simple
; 2 plane resistance, would it not be possible to wire one upto the
; gameport of a PC and with the appripriate driver (which I could write)
; use it as a 'touch' mouse?

;Sounds neat to me! :) Ive always wanted one of those $90 touchpads.

;Steve
etcetera

Just some loose thoughts on the topic. In the late 80's there was an
article in ANALOG, by Les Brilliant I think, on modifying a Radio Shack
joystick to work with an Atari. I ended up building one so I learned just
a
little about the things. The Coco & Atari both use a resistor/capacitor
to
generate Joystick/Paddle input. It's a pretty simple scheme really, just
something like (but not exactly for nit pickers):

digital input fixed VR
POKEY<=--:------:---/\/\/--/\/\/\/
___ :/ ---- :
:\ ---- ------+5V
: :
ground------------------
The way it functions is the transistor is used to discharge the capacitor
&
the amount of time it takes for the input to reach a logic 1 is
determined.
To modify the Radio Shack JS, all that was needed was to add some extra
capacitance to the input. I haven't looked at my IBM Technical notes
lately, but I'm under the impression that they use a similar scheme.
*BUT* the Koala Pad is a little more then just a resistance pad, there's
some electronics in mine anyway. I think you guys are right about the pad
being useful on an IBM. The most glaring example of a game where a touch
pad would help is Lemmings. I still use my pad over a scanner on my clone
for art work. If you recall, they came with a little plastic overlay so
you could place a picture on the pad, the plastic over the picture, then
trace the outline of the picture to Koala format. I just seem to like
this
better then scanners since I usually have to use more effort to remove
```

the
stuff I don't want from a scan then to trace the stuff I want from a
Koala
Pad. Anyway, if you do get serious about it & need some info, let me know
&
I'll see what I can find.

Antic and Analog magazines: circa 1985 - 1988

I bought these originally, way back when. My 800XL is long gone, so if anyone has a soft spot for these, I want to sell them. I don't know if they are rare (or valued), but if you are interested in nostalgia please send a reply with an offer.
Thanks

Posting this file on a bbs or ftp site would probably be a copyright
violation, but you can get other assemblers from amiga.archive.umich.edu.

From: chambera@cs.pdx.edu
Message-ID: <4ecu7d$nu0@sirius.cs.pdx.edu>
Source record: 86258

With all this talk of Synapse games I'm surprised nobody's mentioned Dimension X. I just found a cracked copy of it on some disks I bought at a thrift store and was overjoyed, because my original disk died long ago and none of the vendors seem to have it.

I've always thought of Dimension X as the true sequel to Star Raiders, rather than Star Raiders II (or Last Starfighter or whatever it's officially called). The smooth scrolling of the checkerboard in the foreground when your ship accelerates and decelerates still amazes me.

Anybody remember a Synapse game vaguely like Sinistar, where you flew around a 2-dimensional scrolling playfield and shot at things that were much larger than your ship? (Excuse the muddled description, it's late.) I played this game around 1980 in Supra's original Atari store in Albany, Oregon and have been wondering periodically ever since what it was called. It seemed very cool at the time. (But then, I was eight years old.)

DC>
DC> please reply..

o You could turn "GRAPHICS MODE" off the next time you call the BBS....
(I believe MAJORBBS supports this.)

o You could transfer the file to an IBM PC and just "TYPE" it out
under control of the ANSI.SYS driver. (You can get an old PC for
sixty bucks in some parts, a 286 for a hundred, a 386 for two
hundred.)

o Use an editor "macro" file to remove the various
Escape-Bracket-Number ANSI forms. (There are only about twenty
or so....) TextPro 5.2 is now "faster than thought", unlike its
earlier versions. (Is there an "official" release now ?)

488. Looking for computers for sale

>I've got no idea.

1) Remove all of the boards - memory, etc. Clean the contacts with a nice pink eraser, and blow off *all* of the dust. Then, insert and remove each board several times, to clean the contacts in the slots. My guess is that the contacts are all corroded.

2) If that doesn't work, carefully remove every socketed chip, clean *their* contacts, and re-insert them in their sockets. It's possible those tiny pins are all corroded, too. If you get a lot off of the contacts on the board, it's a sure bet there's a lot on the chips themselves.

I had a computer years ago that went nuts after about a year. Turns out it was corrosion of the pins on the CPU. Once cleaned, the machine functioned normally.

Good luck! The 800 was built like a tank, so I'm surprised you're having this trouble with it. Let us know how things worked out.

Source record: 86268

Anyone have any pinout for this 40-pin LSI?? I have an XEGS that I'm trying to fix that I suspect has this faulty chip in it. All of the other LSIs are ok (can't verify the PAL, unless someone has a JEDEC file for it), but the the system receives NO clock anywhere, although the 14.31818 Mhz oscillator is running. I suspect this chip is a fault because the primary oscillator seems to run into pin 2 of this chip, but no clocks come out anywhere.

I am also looking for some brave individuals that can beta-test a ram checker program I made.. Preferably someone with a 320K XE, a stock XE, a stock XL, and an upgraded XL, and a 1200XL. What I am trying to see if my program can correctly count all of the banks of extra ram available, and also correctly identify the type of atari its on.

Leave Email : NRG299@aol.com

Chris Lam's Rainbow emulator has given me inspiration to make screenshots of some classic (and not so classic) 8-bit Atari games. Before you browse them, you can take a little quiz to see how good your memory is (those who still *play* them on real Ataris or Rainbow will have a slight advantage...) And yes, M.U.L.E. is there.

I am looking for 2 atari disk games,by Broderbund software.

DROL, and SPELUNKER

I would also love to get some other "cool" games I may have missed before...
give me some suggestions, what should I get?

Also,the disks I have now are 10-13 years old; is there a program that
would allow copying a game disk to another disk? (Either stand-alone or
thorough dos?
I want to do this ONLY to save my games...FOR MY USE ONLY!
I am not interested in selling these to others!
The 2 disks above wore out from playing them!
Thanks for ANY info,
Aaron H.

The closest thing I can remember is Zone Ranger by Activision.
Dimension X was okay (neat title music) but was overhyped when it was
still being developed - and was a real let down when it was released
(IMHO :)).

I was thinking, couldn't a GIF to printer program be an easy project for programmers? Something akin to GIFDOT for the IBM. Apac/Color/J-View is a great program, but printing out it's results is just the same as printing out a GR.15 screen. An 8088 with a text-only monitor can print out GIFs better than an 8-bit Atari, but it's the lack of a utility instead of what kind of machine that's doing it.

Anyone interested?

507. 6502 Behavior

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-29 00:00:00 UTC
From: classics@mail.nacs.net
Message-ID: <4ei12j$7e6@tracy.nacs.net>
Source record: 86282

Does anyone have any information on exactly how the 6502 decimal
mode operates?

For example:

```
Clc
Lda #$FF
Sed
Adc #$01
Cld
Rts
```

This results in a value of $66 in the accumulator! ?? Setting the carry
flag results in $67, so nothing creepy there. I was using the Intel
x86 'daa' instruction to do an emulation of the 6502 decimal mode, but it
does not mimic this strange overflow behavior. It does however work
the rest of the time.

Perhaps im still fuzzy on what decimal mode is supposed to accomplish :)

Any documentation or idea on how exactly this mode works?

$FF is not a valid BCD number. In BCD mode each byte is consider as two
nibbles (4 bits) which have valid values between 0 and 9, the remaining
values $a through $f are not used in BCD mode.

Yes, that's the correct chip. It is the 'FREDDY' or Ram Address
Multiplexer. Clock input on pin 2; Outputs, pin 5 (02) and 37 (OSC). I know
Best Electronics has them, about $15.

515. Search for Touch Tablet / Koala Pad

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-29 00:00:00 UTC
From: ricortes@Garg.Campbell.CA.US
Message-ID: <w8sHiD1w165w@Garg.Campbell.CA.US>
Source record: 86290

Let's see if I can make it even more confusing<g>!
;R. Cortese talks about modifying a TRS joystick to work with the A8.)
;And he also talked about the original topic was about the Koala touch
;tablet. Anyways, confused as usual, There ain't no capacitors or
;resistors in a A8 joystick. A A8 joystick is just a bunch of
contacts ;to four wires and a ground. A digital joystick entirely.
100% correct!
;Now the paddle controller I never took apart. Looking for further
;clarification to my muddied mind, not countering what Rick is saying.
;--Russ Gilbert
What I didn't make clear is when I say joystick when referring to
[Apple, IBM, Radio Shack] I'm talking about the variable
resistor/capacitor type thing. When I talk about using a [Apple, IBM,
Radio Shack] Joystick with an Atari, I talking about using the Atari's
Paddle inputs to translate the variable resistance to a number from 0-
128 or whatever the range is [1 or 3-128???]. Referring to my ascii
art, all the caps/transistors/fixed resistances internal. For that
matter, I believe the transistors that dump the charge on the
caps are actually internal on the POKEY chip as part of its silicon.
Foggy memory, but I believe the other systems use something like a 10k
VR & the Atari uses 100k so that's why you need a slight hack.
The reason why I mentioned this in the same breath as a Koala Pad is
the Koala uses the Atari PADDLE inputs. I figure since you can go from
everybody else=>Atari PADDLE inputs, you should be able to go the
other way. But what it may take is modifying a IBM joystick CARD or
the Koala Pad so it appears as 1/10th the resistance it normally does.

No, I too am a registered user validated by a return postcard from Derek M.(how else could he have gotten my home address). I have given up requesting after 4-5 times now.

I think Derek has problems with the newer versions of the PC Xformer(programmers block or something like that) and is turning his back on it for now. This can happen but he should remove the upgrade message from his home page at Branch Software if this is the case. It only causes hard feelings with us that have paid for the software and feel cheated that we can't get the upgrades. If he would only come out and admit there are problems that will be resolved in time he could avoid further PR problems. Hint..Hint..

PS. Maybe its just not as potenially profitable or successful as his other emulator projects.

You are correct, however it is very difficult to use the cartridge
on a workstation or DOS-box while running an atari emulator. :o

That is why I was looking for a disk-based version that
includes the DDT tool.

Thanks anyway.

Steve,

Just picked up my "Programming the 6502" and read a few pages...if you
have this book, look at page 64 (toward the bottom). If not, here is a
summary:

Now you may already know all this, so don't flame me ... =)

When add two binary digits (represented by 4 bits) and your result is
greater than nine (which is the highest digit represented by BCD) - you
```

have a result that is an illegal digit, right?

According to the good book, whenever you have an illegal digit (or result where the 4-bit carry equals 1), you must add $06 to the digit to make up for the 6 missing digits in BCD.

So, for your example, you were trying to add $FF to $01:

```
1111 1111 ($FF)
+ 0000 0001 ($01)
-------------
1 0000 1 0000
^ ^
Carry Partial Carry
```

In the above, each digit is illlegal since each digit had a carry. Therefore, you must add $06 to each digit - giving you the result you saw = $66.

And of course, the second condition with the carry set follows the same logic.

Try this out with other digits to see what you get.

Hope this is confusing...I mean helpful!

Cyrus.Malek@amd.com

I don't know for certain, but I do know the PC conversion of Ozark's
other big title--"The Seven Cities of Gold"--was terrible. I know, I
bought it. You can kill all the natives without consequence, and trading
is a joke...once you befriend them, you just rape 'em.

Plus, the idiots at Electronic Arts think the potato is an old world food.

I wrote them a nice letter, complete with references to the rise of the
Potato in Peru, and its journey to Europe. They still insisted it was an
old world food. The new mule would probably involve two MULEs fighting....

I haven't come across one myself, but I've heard others mention VERY late XEs with a revised self-test routine, that not only doesn't include the "missing" 1200XL keys, but also tests the whole 128K of RAM. Anybody here seen such a 130XE?

I've toyed with the idea before, but every time, I say, "Oh yeah, that
requires handling many different printers."
Converting to a particular printer probably wouldn't be TOO tough (not
trivial though), but I don't think we can pick just one printer.
Maybe just pick one at a time, but which ones first?

Yup. I remember it well. I have a copy of it somewhere (I havent used my 800xl in many many years and dont know if it even works anymore).

I used to write basic programs for the Atari eons ago, and was wondering if anyone remembered the game called Wizard's Realm, which was a 2 player modem text battle game based on a fantasy theme.

I posted here when I received my first of the "new" CN's, but true enough, no one has mentioned the more recent issue here. Still no 8-bit content in their 2nd issue, just a note that if people want 8-bit articles, they need 8-bit article submissions. There were a couple 8-bit ads this time, like B&C ComputerVisions.

If you're wondering why CN themselves haven't posted any announcement here, probably more efficient to ask them directly since I don't know whether they read comp.sys.atari.8bit.

IMNSHOWGAS. (In my not so humble opinion, who gives a sh..)
(This diatribe is about a 'Time' article about Senator
Alan Simpson's effort to cut back on work visas for foreign
'brains'. Biggie American computer companies are strongly
opposed to any effort to cut back on foreign 'brains', as
these people 'have a very high effect on the success of the
company' (Intel spokesman).
Bill Gates, HP chairman?, Jack Tramiel. These guys think
that hiring top programmers/engineers on foreign visas is
going to let them maintain total control over their
respective computer domains. They don't realize that for a
few thousand bucks, they are sending away the future of
American technology, the future of their own companies.
These foreigners are mostly spies that are supported by
their home governments and can easily afford slightly lower
salaries for the top 'brain' jobs in American technology.
My opinion of current MicroSoft warez is that it is so
cludgey that it will not be acceptable for another five
years. Obviously the work of some sly foreigners who learn
what we got and feed us back baloney. AFAIK the best OS and
architecture of a pc now belongs to some Germans who bought
many millions of dollars of top R & D for a lousy 10 million
(speaking of Amiga technology.)
Meanwhile, the US provides the world with the means to
steal US software and technology at the rate of billions of
dollars a year (this internet.) And recent American
engineering/computer science graduates can flip the burgers
that the foreigners eat.
(I had Jack Tramiel in this msg, so it is on topic.)

Yup. It was the pirated version, the came out way before Rescue of
Fractalus. They are basically the same game, except I would assume Rescue
was debugged and fixed up (although I saw no bugs in Behind Jaggi Lines).

I think the key word is "8-bit". If they see that, they stay away.
A message from Rob't Boardman told me they missed the Pro! networks.
Imagine an Atari entity, run by members of an Atari club, ignoring an
Atari network. Problem is, I have dealt with them in the past when they
cut off their newsletter exchange with us. We sent them several letters
asking why, but they NEVER replied. A year and a half ago, we had a
letter campaign looking for groups to exchange with us. TAF ignored our
letter. Personally, I find their attitude rather elitist and snobbish.
I am now on a campaign of my own to warn 8-bit users NOT to subscribe to
Current Notes or do business with TAF. As far as I'm concerned TAF is a
non-entity, as long as they CLAIM to support the 8-bits. Their
executives should look up the word "support" in the dictionary.

Look in the next Nybbles & Bytes in March and you will see the asinine
remarks I've received from the TAF executives and the editors of Current
Notes (which by the way are one and the same, but don't "confuse Current
Notes with TAF", they are too separate entities.)

Yeah, right...

BTW - I hope you REMOVE Current Notes from the Atari 8-BIT FAQ.

Source record: 86170

: I've been saying this for a long time.

That C makes things bloated and sluggish? Please don't blame the language
for the programmer's mistakes. C doesn't have to be either. Let's take
C65 and cc65 for examples. C65 compiles to MAC65 code, doesn't support
many of the structures that ANSI and K&R support, but made it possible
for OSS to turn out things like Sparta Dos. cc65 compiles to ra65 code
a relocatable assembly. Not as tight or fast as action, but supports
ALL the structures of a real C language! Allowing complex problems to
be solved quickly. (so much for bloated and sluggish, pick one or the
other, or streamline your code and have neither!)

: As hard drives and memory get cheaper and cheaper, programming skill and
: artistry decline. As long as the answer to a software dilemma remains
: "throw more memory/disk space at it," there will be no attempts by the
: programmer to make the code more efficient and take less space. Faster
: processors make inefficient code less noticeable (if at all) for most
: applications; larger hard drives make it possible for what used to be a
: 2 MB application to require 10 MB with only slightly more functionality.

Yes this happens alot. And although I despise it, I understand the
argument my opposition uses to tote the line. Which is, "Hard Drives and
memory are cheaper than programmers on a payroll for an addition length
of time with no working product." And as long as business is running the
show with a tight bottom line, that's the direction code will go!

: That was one of the beauties of the systems of yesterday--while the
: limited or nonexistent upgradability of them was a solid barrier, it
: was also a challenge to the programmer. How can I get all of this
: to fit on one disk? How can I make it all run in 48K? And how can I
: optimize the code to make a slower processor happy?

Hey, there's an idea, maybe we can bribe our EE friends to produce
machines with intentional limitations! Sorta like planned obsolecence,
only better for programmers. (Laugh go ahead, I dare ya.)

"Behind Jaggi Lines" was the working title of "Rescue on Fractalus," but was pirated (off Lucasfilm's phone lines, from what I read long ago) before it even saw the light of day. I think by this time, the Lucasfilm/Atari deal was already questionable, because nothing ever became of it.

The bootlegged BJL was pretty much the same as its commercial counterpart, lacking the title screen, having different fonts, and also had a few minor other things missing (like the pilots dying if you didn't let them in). Also, you had up to 99 levels, which was pretty insane in itself.

>Rts
>
>This results in a value of $66 in the accumulator! ??

This sounds correct to me.

Decimal mode is only intended for use with numbers that are already in BCD format. Anything over $99 is undefined, so that's why you're getting that behavior out of the decimal add. If you consider that $FF already has a BCD overflow of $65, then the above result is coming out correctly.

To visualize this, imagine $9A as being just one number past the BCD limit. If you added $01 to $99, you'd get $00 with the carry set. $9B would be like $01 with overflow, $9C=02.... up to $FF=$65. That's where your result is coming from.

Be advised that the Z and N status flags are not set correctly on the 6502 in decimal mode, and it will be very difficult to emulate them exactly. The flags are set before the CPU does its internal BCD adjustment, but it's more complicated than that when there would be a BCD carry from the low nybble to the high. (but not a binary one). Basically, I wouldn't worry about it because it is doubtful that any programmers use Z and N flags in BCD operations since they don't work correctly.

Yes, any standard RF switchbox should do. However, if your computer has been
collecting dust for quite some time, you'll want to swab the RF connector on
the computer will Isopropol rubbing alcohol -- otherwise you will likely get
a staticy picture. Be sure to get inside and outside the connector. Also,
only do this WITH THE COMPUTER TURNED OFF. Give about 10 minutes drying
time before turning the machine back on.

Frankly, you'll probably want to use a composite monitor. I picked up an old
Commodore 1702 monitor from a local electronics store for $10. Building
a cable isn't too bad if you're OK with a soldering iron.

Source record: 86302

I've tried the XFormer 3.3 Demo and found a strange behavior of
the RESET key (F10).
If set to Atari 800 Mode and Basic is disabled F10 works like the
'original' RESET key.
If set to Atari 800XL Mode and Basic is disabled F10 switches on
Basic !!!
As a result of this many programs don't work because they hook
into the reset vector and start themselves with a reset.

Is this only in the demo or also in the commercial release?

"Behind Jaggi Lines" was a pirated pre-release version of "Rescue
on Fractalus".

Derek seems to be very particular about how you request a
user name and password, namely:

1. He does not give you a user name and password; you
must give them to him.

2. Your user name (and password) must be one word (ie. "JohnSmith").

3. You must supply the address that was on your original
registration card as well as your e-mail address.

Whether or not you agree with his peculiar approach to customers, this
is the only way you'll get access.

Behind Jaggi Lines was a prerelease copy of Rescue on Fractalus.
Ballblazer leaked out at the same time. Both were, of course, illegal,
but very desired - being the first Lucasfilm games ever.

Similar situation to The Last Starfighter, which was never officially
released (though being a terrific game - similar to Jr Pac-Man,
another good game that never saw release), which was updated a little
a year or so later and sold as Star Raiders II - though I think Last
Starfighter was a lot more fun.

: I could've figured there wouldn't be any 8-bit coverage.

: > If you're wondering why CN themselves haven't posted any announcement here,
: > probably more efficient to ask them directly since I don't know whether
: > they read comp.sys.atari.8bit.

: I think the key word is "8-bit". If they see that, they stay away.
: A message from Rob't Boardman told me they missed the Pro! networks.
: Imagine an Atari entity, run by members of an Atari club, ignoring an
: Atari network. Problem is, I have dealt with them in the past when they
: cut off their newsletter exchange with us. We sent them several letters
: asking why, but they NEVER replied. A year and a half ago, we had a
: letter campaign looking for groups to exchange with us. TAF ignored our
: letter. Personally, I find their attitude rather elitist and snobbish.
: I am now on a campaign of my own to warn 8-bit users NOT to subscribe to
: Current Notes or do business with TAF. As far as I'm concerned TAF is a
: non-entity, as long as they CLAIM to support the 8-bits. Their
: executives should look up the word "support" in the dictionary.

: Look in the next Nybbles & Bytes in March and you will see the asinine
: remarks I've received from the TAF executives and the editors of Current
: Notes (which by the way are one and the same, but don't "confuse Current
: Notes with TAF", they are too separate entities.)

: Yeah, right...

: BTW - I hope you REMOVE Current Notes from the Atari 8-BIT FAQ.
: ~~~~~

I agree whole heartedly! T.A.F. largely ignores its' 8 bit users. The
Phoenix rarely has anything 8 bit in it at all.....now Current Notes
seems to be the "Phoenix" in Current Notes clothing. I dont think there
is anything worthwhile for an Atari 8 bitter.

My Users group is just down the highway in Hamilton, and we have a large
8 bit faction. They represent half of our small club. And, they contribute
the most to our newsletter. So, our Gazette has quite a bit of Classic Atari
coverage. I spoke with Howard Carson and made arrangements to trade

newsletters.....we sent our Gazette, but never receieved anything in return. I have instructed our correspondent to stop sending them the Gazette, until we get the Phoenix.

I do get the distinct impression that TAF is elitist. If there are any 8 bit owners in the Toronto area reading this, I would like you to know that there is an ACTIVE 8 bit club (we have ST owners too) right down the road in Hamilton. It is NOT THAT FAR.....Email me for directions....

We meet on the second Tuesday of the month (next one Feb 13th) in the Union Gas Building in Hamilton (Basement 7:30pm)....corner of Hughson and Main Street E.

The versions are, as far as I can remember, exactly the same, but I
believe the Lucasfilm intro with the logo in metal-style graphics on
a brown or red background appears the released version before the game
starts.

If they wanted people to submit 8-bit articles, then they should have
posted an announcement in the 8-bit networks and newsgroups. Trust me,
they don't want 8-bit articles (quote):

John:

First to clear up what seems to be some confusion. The revitalization of
Current Notes has absolutely nothing whatever to do with the Toronto
Atari Federation. Yes, there is a small group of 8-bit fans left as part
of TAF. And we do enjoy having fun with our machines, but that has
nothing to do with Current Notes.

Secondly, you said the announcement of the "new" Current Notes didn't
get to one of the online services you deal with. Sorry, but we couldn't
get everybody. The message about the first issue under the guidance of
Howard Carson and myself was publicized on Compuserve, GEnie and several
other major Canadian and U.S. electronic groups. We couldn't get them
all, we don't even know what most of them are called. We have to rely on
interested parties like you either spreading the word, or letting us
know who we missed so we can do a little more publicity. (BTW the first

issue of the new CN was Sep-Oct 95. The Jan-Feb issue will be going out to subscribers and retailers this week.)

Third, we are pleased to publish quality material about 8-bit systems. However, all material has to meet the same editorial criteria. One of the major guidelines we have is that the material published in CN has to be original. We are not a reprint magazine. We aren't going to publish online dialogues which happen to be distributed widely through various BBSs and the 'net, for example.

If you want to contribute, send us your ideas for articles, and then follow up your ideas with articles. We'd like to publish 8-bit stuff - but good original material on computers that are more than 10 years old is very rare.

Hope to hear from you again soon.

>Montezuma himself stomping on the floor.

The one where he stomps on the floor was the original version Robert Jaeger wrote for his company before Parker Bros. obtained it and truncated it down to size. I don't think it was fully complete (or an official release -- like other legendary Atari software), because once I got to that level, there wasn't much to do but run around or get more points. The Parker Bros. version did have a point where you could win -- there was a room filled with those little treasures, and all you had to do was collect them. This led to the next level. After a certain point, the game would end when you completed it all.

: be interested in buying it.

You could get an Atari modem, but do yourself a favor and get a standard modem interface (such as a P:R: connection or an 850, neither of which should cost you more than $20) and an 850 modem cable if you're using an 850, and buy a real modem.

Modems designed for the Atari 8-bits are no faster than 1200 bps. By getting an 850 and a modem cable, I was able to connect a 9600 Hayes-compatible to the Atari with no other hardware upgrades. I've found that anything over 9600 is overkill for the Atari; besides, 9600 seems to be the fastest rate at which the machine can reliably operate without additional hardware. (Think about it: everything is in text mode, and files to download are usually under 100K. That hardly requires ISDN.)

In short, you could get a 1200 bps modem, but you'll go nuts after just a few minutes anyway. Go for the gusto. :)

readings

The STM1 Mouse works as an inverted trackball (which is, in fact, what it is). The left button corresponds to the joystick trigger; the right button must be read in more or less the same way as the keyboard

controllers, I guess (I had to return the mouse I borrowed before finishing my analysis).

Mouse rolling forwards (up) Mouse rolling backwards (down)

```
U/D U/D U/D U/D
REF SNS REF SNS
------- -------
0 1 0 0
1 1 <-\ 1 0 <-\
0 1 --/ 0 0 --/

REF SNS REF SNS
------- -------
0 1 0 0
1 1 <-\ 1 0 <-\
0 1 --/ 0 0 --/
... ...
```

I tried to write a resident handler which should convert the mouse readings into joystick values and put them into the shadow register for joystick 2 (remember that on the ATARI XL/XE only joysticks 0 and 1 are in effect, and 2 & 3 just contain repeats of 0 and 1). Then, if you read STICK(2), you would have the translated values; STRIG(2) would give you the status of the right mouse button; and for the left button, you would still use STRIG(0). Unfortunately, the routine got hanged sooner or later, and I had to return the borrowed mouse before I could finish debugging it. Maybe I can borrow another and resume the task...

```
Joystick miscellany
-------------------

1- Analog joysticks
-------------------
Have you ever considered the fact that an IBM-PC-type analog joystick
consists of two potentiometers (one each for the x- and y-axis) and two
pushbuttons, just like a set of ATARI (or Commodore) paddles? Have you
ever thought of connecting such a proportional joystick to your ATARI or
Commodore computer in order to use it with your programs? Well, here's
how to build a 15-pin analog joystick port from 2 9-pin ATARI ports. You
will need a 15-pin and 2 9-pin female connectors and a 15-wire cable.

Internally, the analog joysticks are basically like this:

pb1A
|
O
| Y1
pb1B -O--+ | U
| |
GND Z
/->Z Ry Rx=Ry=200-250 K
| Z
/----\ | |
v | \--+ D
X1 ----NNNNN--+----+----- +5V
L Rx R

The pin assignmet in the 15-pin IBM-connector is the following:

pin _________________________
# function \8 7 6 5 4 3 2 1/
------------ \15_14_13_12_11_10__9/
1 +5V
2 pb1A
3 X1
4 GND
6 Y1
7 pb1B
10 pb2A
11 X2
13 Y2
14 pb2B
```

Similarly, the pin assignment for the DB9 connectors (in the case of paddles) is the following:

```
pin ___________
# function \5 4 3 2 1/
------------ \9_8_7_6/
3 L button
4 R button
5 R paddle
7 +5V
8 GND
9 L paddle
```

Well, let's begin with the connections for 1 analog joystick. Take the cable and use it to connect the following pins on the 15-pin connector to the corresponding pins on one 9-pin connector:

```
15-pin 9-pin
-------------
1 -> 7
2 -> 3
3 -> 9
4 -> 8
6 -> 5
7 -> 4
```

Now, you can try connecting the 9-pin female to joystick port 1 on your computer and the analog joystick into the 15-pin female connector. Then, write and run a subroutine like this and try moving the joystick and pressing the buttons:

```
0 PRINT PADDLE(0), PADDLE(1), PTRIG(0), PTRIG(1):GOTO 0
```

You could also load any program which uses a touch tablet and test the joystick instead (e.g, ATARI ARTIST).

If you have a dual analog joystick ('dual' in the same way that paddles are connected by pairs to a single port), then you can now make the following additional connections from the 15-pin female to the second 9-pin female:

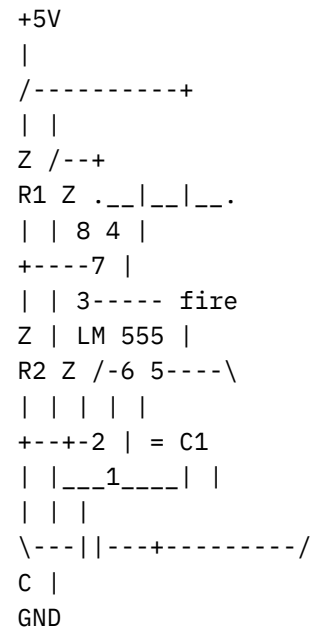
```
15-pin 9-pin
-------------
10 -> 3
11 -> 9
13 -> 5
14 -> 4
```

Now connect the second 9-pin female to joystick port 2 on your computer; the second analog joystick should be readable through PADDLE(2), PADDLE(3), PTRIG(2) and PTRIG(3).

```
2- Portable autofire
--------------------
```

This is a solution for those joysticks which don't have a +5V line (red wire typically, connected to pin 7). You will need a 9-pin female and a 9-pin male connector, an LM 555 timer IC, two resistors (R1=R2=10 K), two capacitors (C=100 nF, C1=0,42 nF), a two-position switch and some wire. Since you will need also an appropiate casing, I would recommend you to use a 9-pin null modem adapter (e.g., Radio Shack #26-264), which will provide you already with the casing, wiring and DB9 connectors.

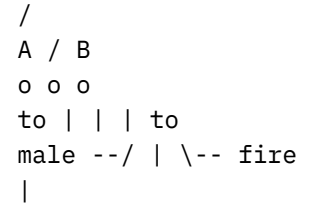
First, build the following autofire circuit in the smallest possible area (less than 0,5"x0,5"):



If you are using the null modem adapter, skip this paragraph and continue with the next. If you aren't and are building the adapter with separate parts, then just connect each pin from the 9-pin female to the same pin on the male connector. Now you've just built what the adapter looks like on the inside.

Now, if you are using the null modem adapter: just open the casing and accomodate the circuit inside. Make sure that all pins on the male are connected to the same pin # on the female (i.e., pin #1 to pin #1, pin #2 to pin #2, etc.) and not cross-connected.

Now for both: Connect the +5V line to pin #7 (either on the male or the female connector, it's the same). Similarly, connect the GND line to pin #8. Cut the wire from pin #6 just in the middle. Now, proceed to make the following connections on the switch:



to female

Now, make the appropiate holes in the casing for the switch. Fix the switch in place and close the casing. Now the portable autofire is ready for use.

Just connect the portable autofire between the joystick port on the computer and the joystick's plug. With the switch in the A position, you will simply bypass the autofire circuit (autofire disconnected); when it is in the B position, the autofire is connected and the joystick's fire button is disabled. The advantage of this design is that you can connect the portable autofire to any joystick you want, without having to make any permanent modification to it.

3- Tank-style levers

Surely you remember BATTLEZONE (tm), don't you? I loved playing that game on the arcades, since it was one of the first games to offer you 3-D graphics and a first-person viewpoint. Then ATARI released it for its 2600 VCS (after many years), with some of the best graphics I've seen on the 2600 VCS. And then came the version for ATARI 8-bit computers... the only one I haven't seen, because somebody stole the last cartridge from the computer fair back in 1989; I assume the controls were like the 2600 VCS version:

```
forward
^
turn left | turn right
rotate \ | /
counterclockwise <----*----> rotate clockwise
/ | \
reverse left | reverse right
v
back
```

The arcade version had real tank-like controls instead:

```
left right
tread tread

forward ^ ^ forward
| |
motionless + + motionless
| |
back v v back
```

The combined motion of both treads gave the same 8 different possible movements for the tank.
Well, if you (like me) aren't happy with using just the joystick and want to have a more 'realistic' feeling, here's how to build your tank levers, including the necessary circuitry to provide the respective joystick signals for each combination.

Let's compare the switch values for the 9 joystick positions and the
9 tank-lever positions:

joystick tank levers

U X Y
SWITCHES L-+-R | |
D Z W

movement RLDU XYZW
---
motionless 1111 1111

forward 1110 0011
back 1101 1100
counterclockwise 1011 1001
clockwise 0111 0110

turn right 0110 0111
turn left 1010 1011
reverse right 0101 1101
reverse left 1001 1110

The functions which map (X,Y,Z,W) to (R,L,D,U) are:

_ ___
R = Y + X.Z + Z+W _
_ ___ = NOT
L = X + Y.W + Z+W
___ . = AND
D = X.Y + Z.W
___ + = OR
U = X.Y + Z.W

You will need:

- 1 74LS04 IC (6xNOT) (IC1)
- 1 74LS08 IC (4xAND-2) (IC2)
- 2 74LS32 ICs (4xOR-2) (IC3 and IC4)
- 4 14-pin IC sockets (optional)
- 1 2"x3" IC PCBoard (like Radio Shack #276-150A)
- lots of jumper wires
- soldering iron and solder wire
- 1 9-wire cable (as long as you like)
- 1 joystick connector (9-pin, female)
- 4 pushbuttons for the lever switches (X, Y, Z and W)
- as much pushbuttons as you want for firebuttons
- 1 board for mounting the switches
- 2 self-centering levers (inverted T form)
- 1 casing for the whole

Connections:

First, solder all wires of the cable to the 9 pins of the joystick
connector. The free ends of the wires will be referred to as joyN,
where N=1-9 is the corresponding pin number at the connector.

```
__________
\5 4 3 2 1/
\9_8_7_6/
```

Mount all 4 lever switches in their board, properly spaced. Remember
that the levers are supposed to press them once in place.

```
X -O O- Y
| |
+-----+--- GND
| |
Z -O O- W
```

Solder the 4 sockets (or the ICs, directly, if you're cheap) in place
in the PCBoard. Pin # of ICx will be referred to as ICx-#, where x=1-4
and #=1-14.

```
_______________________________
|() ..................... ()|
| .:::::::::::::::::::::::. |
| ::|o_IC2__|:::|o_IC3__|:: |
| :::::::::::::::::::::::::: |
| :::::::::::::::::::::::::: |
| :::::::::::::::::::::::::: |
| :::::::::::::::::::::::::: |
| ::|o_IC1__|:::|o_IC4__|:: |
| ::::::::::::::::::::::: |
|()_____________________()|
```

Now use the jumper wires to make the following connections:

+5V: joy7, IC1-14, IC2-14, IC3-14, IC4-14
GND: joy8, IC1-7, IC2-7, IC3-7, IC4-7, ground of all pushbuttons
R: joy4, IC4-6
L: joy3, IC4-8
D: joy2, IC3-3
U: joy1, IC3-6
FIRE: joy6, trigger of (all) firebutton(s)
X: switch X, IC1-11, IC2-2, IC2-4
Y: switch Y, IC1-9, IC2-5, IC2-10
Z: switch Z, IC2-1, IC2-12, IC3-12
W: switch W, IC2-9, IC2-13, IC3-13
IC1-1, IC2-6, IC3-4
IC1-2, IC3-2
IC1-3, IC2-11, IC3-1
IC1-4, IC3-5
IC1-8, IC4-1
IC1-10, IC4-13
IC1-12, IC4-5, IC4-9
IC1-13, IC3-11
IC2-3, IC4-2

IC2-8, IC4-12
IC4-3, IC4-4
IC4-10, IC4-11

If you're using sockets, then now you can place the ICs on them.
You can include an autofire switch in the design, if you want. You could also have the two pots (joy5 and joy9) being used for anything you can imagine.
Make sure the levers will press the pushbuttons when pressed. You will have to assemble the whole thing inside the casing, making it fit.
Now you're ready to blast those @&%# enemy Automatons!

569. 5200 -> 800 ports

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-31 00:00:00 UTC
From: krieg@miller.cs.uwm.edu
Message-ID: <4eorbs$7p2@uwm.edu>
Source record: 86194

I remember stumbling across a few 5200 games that were illegally ported to 800/XL/XE game files, on a BBS around 10 years ago. Some of the titles included Gremlins and Junior Pac-Man. How was this done? Didn't the 5200 use a different joystick configuration than the Atari computers?

Were there any differences between a game that was devloped for the 5200 and one developed for 800 family (e.g. Pac-Man, Joust, Moon Patrol etc) or was one just a port of the other?

Are there other "port files" out there for games that were developed for the 5200, but not the Atari computers (Realsports Baseball, Fathom, Moonsweeper, Quest for Quintana Roo, etc)?

No, they are the same. The first version to leak out from LucasFilm was
"Rescue Mission". I got a pre-production version of that in 1983. Due
to the mess at Atari, it was years before we could buy the real thing.

571. Running Basic from machine code

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-31 00:00:00 UTC
From: luszczek@student.uci.agh.edu.pl
Message-ID: <Pine.SUN.3.91.960131175331.29917B-100000@student>
Source record: 86196

I was recently trying to run Basic program within machine language, but I failed. I would gladly know about some resources on this subject.

What I did was setting Basic memory register starting from $80 and ending at $91. These registers set address of lowest and highest memory location, address of Basic variables names and values, address of Basic program begining and end. I also set properly RAMTOP (location $6A). Then I tried to jump to subroutine at $B755 which is acctually code for Basic RUN instruction. But nothing happend. I thought that's becasue Basic should set some other stuff before starting the program, so I tried to jump to $A000 subroutine before running the program. But then I had to type anything and I was back in my program in asembler and nothing happend. I probably don't know something, so help with it! It's really hard to disasemble the Basic code(I don't know about ather resources). Waiting for suggestions

Piotrek.

573. G: Device Print ATASCII cntrl chars

Newsgroup: comp.sys.atari.8bit
Date: 1996-01-31 00:00:00 UTC
From: Russ.Gilbert@apk.wariat.org
Message-ID: <1996Jan31.220332.22579@wariat.UUCP>
Source record: 86198

I earlier said everyone should know about Angelo Giambra's G: device.
A device handler that lets you list A8 BASIC programs graphically so
the inverse and cntrl chars print on Star and Epson printers.
Yes, well, Ok. It was Charles Johnson's program in ANALOG #35.
Great program. Johnson also did some neat stuff for the ST (I forget
what). Angelo Giambra did B-Line in issue #29, which I forget what
does, but BIG important, nice to have, a real good BASIC renumber
program in issue #27 (all these are ANALOG).
By the way, looks like nobody is going to sell me ANALOGs 1,3,4,5,
Sooooo.... Would anybody be willing to xerox these issues for me? A
copyright violation I suppose. I'm slooooooowly puttting in a data base
all articles from ANALOG, a long project. As many know ANALOG printed
an index of issues #15 to #49, but I want to be able to also look up
articles from #1-#14 and #50-#79. I would certainly share this
database (call it the rest of the ANALOG index), especially if someone
could help me finish my collection.

Actually, it was developed for the 1400 series. It is used in the 1400
and the 1450XLD.

Well, I have written him several times over the last few months with no reply, I think he is a jerk. I have dropped my plans to buy GEMulator. If he needs the original email address, that is a problem...as that computer is in a scrap heap in Maynard, Mass. I have written him explaining the change in address, but he ignores me. I made a major mistake purchasing products from him. A mistake I will not make again.

I've done a little BASIC programming on the 8-bit Atari's but I'm not deeply familiar with the hardware. Can anyone tell me why the paddle lines only range from 0 to 228 rather than 0 to 255? Just curious!

Isn't it because the Atari uses one of its internal video display counters in the process of analog to digital conversion? Like the vertical counter? This seems plausible, because it has 192 display scan lines, and 228 would leave several for the vertical blank.

See reply in EMail.

Basically, since I haven't been able to get Atari hardware for quite some time, I stopped selling plug-in carts a long time ago. Current products are hardware/software packaged together. If there's anyone else interested, please let me know.

No idea, but I can tell you that "Glen the 5200 Man" was one of the main hackers doing that stuff. Space Dungeon is another 5200 games that comes to mind.

580. Atari Cable Message System

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-01 00:00:00 UTC
From: tdrake1@umbc.edu
Message-ID: <4ep2u4$2lc@news.umbc.edu>
Source record: 86110

Anybody know where one can obtain the software/cartridge for the Atari
8-bit message system for cable and closed circuit TV?

I know there was some company out of Seattle that was marketing/selling
such a messaging/info channel system back in the 1986 timeframe.

Any leads would be helpful.

Thanks!

Tom

>What were the differences between Last Starfighter and Star
>Raiders II?

"The Last Starfighter" had an intro screen (and not a very good one at that) of a ship taking off to the theme music. The game play was also slightly different. Instead of going to an ally ship for refueling and re-powering, you had to head to the sun and wait. If you hung around too long, you melted. There are few other things which I'm sure someone else will fill you in on...

I got their catalog in the mail. The prices are pretty high, most Atari
8-Bit games are $20. They do have fair prices on the Arcadia Supercharger
for the 2600 though, if you don't have one yet, they're charging $15.

597. Garbled sound on XFormer

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-01 00:00:00 UTC
From: ddahlstrom@mhv.net
Message-ID: <311001ce.2619290@news.mhv.net>
Source record: 86201

Just wondering if anyone has had problems with garbled sound on PC XFormer (all versions). I have discovered that on my machine (a 120MHz Pentium) that I can only get normal sound if I slow the clock speed down to 75MHz. At all speeds above that (ie. 90, 100, 120MHz) the sound becomes garbled. I am using a Sound Blaster 16 MCD and the problem occurs under both Win95 and DOS 5.0. Any solutions?

darrins@cyllene.uwa.edu.au (Darrin Smith) wrote:

>Ahem! back to the original question...

>Which one should I get!!!

>(I'm leaning toward the 65XE as it had a disk drive and games with it!)

The last facts might indeed be a deciding factor--disk drives (that work!) are much harder to come by than the cpus. Even harder are power supplies.

But to [mostly] summarize previous points here:

850xl beats 65xe for hardware-hacking expandability, reliability, and (sometimes) repairability.

65xe is newer, and MIGHT have slightly better NTSC video output than SOME xls. I'm in a minority, but I like xe keyboard feel better than all others.

Big weaknesses to watch out for in xe's are keyboard (the mylar contact membrain is very succeptible to dirt and wear--individual keys and particularly SELECT/OPTION/START keys can cease to operate) and the game port (contacts can wear/break and make loading carts flakey or impossible). Thoroughly check out any thrift shop machine if you can, or if it's a real steal, buy it knowing it may end up being a spare-parter. If these stats are worth anything, my current collection of mostly thrift shop or yard sale specials break down this way:

No. Working Non-Working

400s 2 1 1
800s 2 1 1
1200xls 1 1 0
600xls 0 0 0
800xls 2 0 2
65xes 2 1 1
130xes 2 1 1 (good 1 with flakey game port, replaced keyboard)
XEGSs 2 2 0 (1 with flakey game port)

YIKES, no wonder my basement is such a mess!

602. Looking for a modem

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-02 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <3112bac2@pianosa.demon.co.uk>
Source record: 86056

Whilst reading the usual rubbish I find here, Will Dwinnell wrote something interesting to Tim Irvin about Looking for a modem:

Hello Will,

WD> Is it possible to run a null modem off either the P:R: connection or the
WD> 850?

I use a null-modem cable here. It's used to connect between my 850 and my Amiga's serial port. I use the Amiga here (on the 'net) and just port everything across, once it's dearchived.

As the P:R: Connection is an RS-232 port, a null-modem cable will work there, too.

>> The graphics are WAY too big (in filesize, not screen size), though.
>> --
>Hmm, really? I thought they were relatively small filesizewize. How
>big(or small) do you think they should be? Quite honestly I snuck them
>from other web pages! :-)

I used "xv" (in Unix) to load atari.gif and Atari_logo.GIF. The
originals were 2069 bytes (pretty good, actually) and 42373 bytes
(horrible).
Then I told xv to save with a reduced color map -- only save the
colors that were actually used. The size difference, especially in
Atari_logo, is amazing -- Atari_logo was reduced by a factor of almost
7 -- and the images look identical.

6133 Atari_logo-reduced.GIF
42373 Atari_logo.GIF
1649 atari-reduced.gif
2069 atari.gif

I'd highly recommend looking at http://www.infohiway.com/way/faster/
for suggestions on making graphics load faster. In my opinion, most
graphics should be under 10k, maybe some in the 10-20k range.

Message-ID: <kmgoiD2w165w@Garg.Campbell.CA.US>
Source record: 86128

```
;I was recently trying to run Basic program within machine language, but
I
;failed. I would gladly know about some resources on this subject.
;What I did was setting Basic memory register starting from $80 and
ending
;at $91. These registers set address of lowest and highest memory
location,
;address of Basic variables names and values, address of Basic
...
Piotrek; is there a reason why you are using such an uncoventional
approach? The way most programmers run BASIC from ML is to just write a
message to the screen like:
RUN"D:PROGRAM.BAS"
Position the cursor above the line, then put the Atari in forced read
mode.
The only other programmer I've seen that went with something similar to
your scheme was in the ANALOG magazine somewhere around issue 67-72. He
did
a progam that would binary load BASIC programs from DOS.

605. 5200 -> 800 ports To: Atari8@netcom.com

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-02 00:00:00 UTC
From: ricortes@Garg.Campbell.CA.US
Message-ID: <DLgoiD1w165w@Garg.Campbell.CA.US>
Source record: 86129

;I remember stumbling across a few 5200 games that were illegally ported
;800/XL/XE game files, on a BBS around 10 years ago. Some of the titles
;included Gremlins and Junior Pac-Man. How was this done? Didn't the
5200
;use a different joystick configuration than the Atari computers?
Yes, a 5200 used the POKEY chip to read the JS vs the 6520/PIA chip.
;Were there any differences between a game that was devloped for the 5200
;one developed for 800 family (e.g. Pac-Man, Joust, Moon Patrol etc) or
was
;just a port of the other?
Another thing I should really look up vs guess, but it's a subjective
question anyway. I've read the ROMs for both the 5200 OS & some 5200
carts.
The main difference is the 5200 OS is almost non-existant. There's a
character set and a few routines in there, but nothing like and 800 with
its resident disk routines, floating point math, ... The chips are all
the
same, 6502C, POKEY, GTIA, ANTIC, but I think the locations may be
different. Max of 16k RAM in a 5200. => A game made for the 5200 would
need
more routines in the cart since it didn't have access to anything like
the
800 OS, but the chips it was working were identical *IF* in a different
memory location then the 800 series. Not a straight across translation,
but
not like starting from scratch.

The solution to your problem is simple, once you look at it from a different perspective...

Instead of loading a machine-language program that tries to run a Basic program (HARD), load a Basic program that runs your machine language program (EASY)!

Then when you need to run a Basic program from your ML program, just stuff the filename somewhere safe and pass a flag back to Basic via the USR call you used to get into ML in the first place. And if you need to run another ML program... well, it's a lot easier to kill Basic than it is to bring it to life.

It does count scan lines for determining the pot value, but I don't think
that's why it is limited to 228, since there are 262 lines per video field.
The scanning just happens to stop when it reaches 228. 228 is the number
of color clocks in one horizontal scan line, and this counter is used when
reading pots in "fast mode". They've limited the value of the normal scan
line counter so that it returns values compatible with the fast mode.

Certainly it's possible. Bobterm was written to use either R1: or R2: so
that you could plug a modem into one port an a null-modem cable in the other.

Subject: 1.1) What is an Atari 8-bit computer?

In order of their release, the Atari 8-bit computers include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System. The 400/800 models were first shown publicly in November 1978 and first sold in 1979. The final machine, the XE Game System, was released in 1987. Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM,

ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

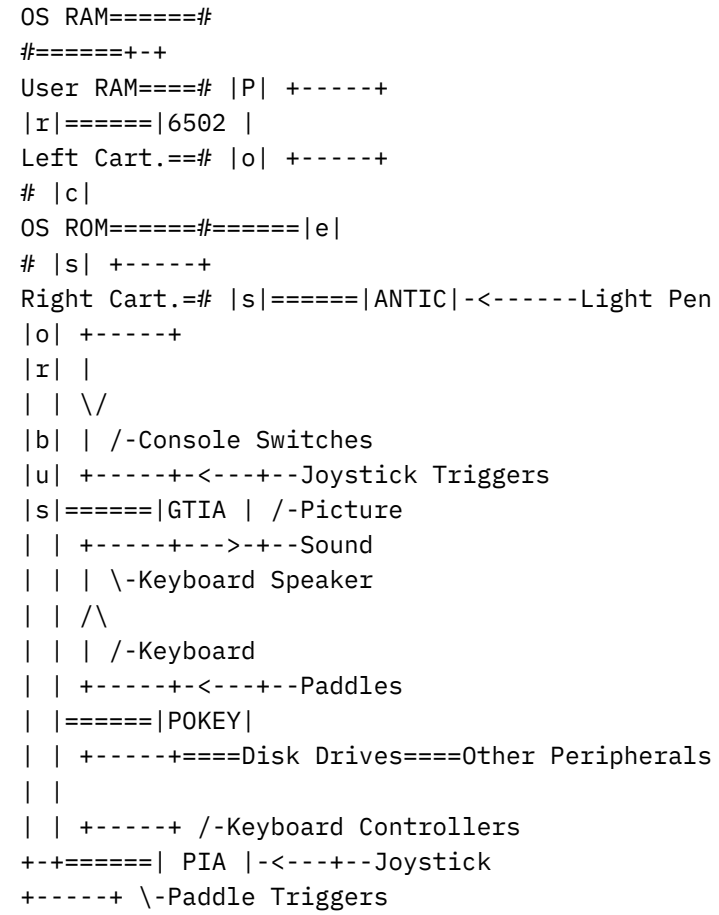
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexor. According to URL:mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is

beyond me. An 800XL can look like a 130XE with that 16-pin chip installed
(That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement



Beginners at using the 8-bit Atari platform may wish to contact Bill
Kendrick, URL:mailto:kendrick@sonoma.edu , for his Newbie/Emulator FAQ.

The following is taken from Bill's Newbie/Emulator FAQ.
Graphics:
The Atari has maximum resolution of 320 x 192 (standard, non-overscanned
screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4,
160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also
supported. 40 x 24 x 256-character (128 normal, 128 inverse, character
set indirection available) text mode is standard (2 colors).
40 x 24 x 128-multi-colored-character (4 colors per character allowed,
the other 128 characters have 4th changed into a color 5) and
40 x 12 x 128-multi-colored-character screen modes are available.
GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only,
and 80 x 192 x 9 color screen modes.
Graphics Modes Summarized:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text

2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen
modes are available.
Screen modes can be mixed (by lines) down the screen using the Display
List - a program which is executed by the ANTIC graphics chip every
screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.
All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

According to Doug Neubauer (by way of URL:mailto:finneganj@delphi.com (James
Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator

A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

[I'd like more system spec's here.]

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through URL:news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

URL:news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from URL:mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

URL:news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

URL:news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

URL:news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

URL:news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at URL:mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

URL:mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd,
URL:mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this
discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
URL:mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in
the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach
comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command
to LISTSERV@MARIST, or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please
note that this command must NOT be sent to INFO-A8@MARIST or to
info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX
INFO-A8" command to LISTSERV@MARIST or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "index info-a8". These files can
then be retrieved by means of a "GET INFO-A8 filetype" command, or by
using the database search facilities of LISTSERV. Send an "INFO DATABASE"
command for more information on the latter.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
URL:mailto:ravi@mcnc.org (Ravi Subrahmanyan)
URL:mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin.

Mail the text of your post to:

```
group.name@news.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@bull.com
group.name@cass.ma02.bull.com
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name.usenet@canaima.Berkeley.EDU
```

group.name-news@newsbase.cs.yale.edu

For example, to post to comp.sys.atari.8bit, you might send your message to:

comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Be sure to include an appropriate Subject: line, and include your real name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com (Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to mailto:listserv@info.cern.ch (older address) containing the following single line. (What you put on the subject line doesn't matter; blank is OK. This line should go in the text of the message.) You will receive as a reply a simple page intended to help you learn more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of files for many computing platforms, including the Atari 8-bit computers. For more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich Archive. The Archivists request you use these mechanisms in this order of preference:

1) The number one way to get into the UMich archives is via AFS. If you have AFS, all our files are kept in the directory "/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT! Specifically, use:

URL:file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software Archives" choice. Specifically, use:

URL:gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
URL:gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
URL:gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
URL:gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

URL:http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
URL:http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

URL:ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
URL:ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
URL:ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
URL:ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
URL:ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
URL:ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
URL:ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files

(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts
usually don't arrive in the proper sequence. Also, please include a
message labeled "file transmission," containing a short description of
the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is
maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to
have seen no uploads for years, but there are some files here that aren't
on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by Eyvind Bernhardsen,
mailto:eyvind@lise.unit.no . PVV stands for ProgramVareVerstedet, or The
Software Workshop, a student society at the University of Trondheim, Norway.

ftp://nova.pvv.unit.no/pub/Atari/8bit (129.241.36.207)

Uploads go to ftp://nova.pvv.unit.no/incoming/atari/8bit; Eyvind moves
them to the appropriate directory. Please include a .readme file with
each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson,
mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari
8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The
Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, URL:mailto:sup8pdct@closer.brisnet.org.au for more info.

URL:ftp://203.4.149.98/8bit

Subject: 4.7) What is Preston Crow's ftp site?

Preston Crow keeps a small site filled with the latest utilities for manipulating .ATR and .XFD files.

URL:ftp://ftp.cs.dartmouth.edu/pub/crow/atari/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National Public Telecomputing Network. It can be accessed by any of the following: telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are automatically members of the official Atari user group C.A.I.N. - Central Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari Community E-Mail Directory" listing. Send correspondence and press releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the Youngstown Free-Net Atari SIG?

Youngstown Free-Net (Youngstown, Ohio USA)
telnet://visitor@yfn.ysu.edu (192.55.234.27)

Type "go atari" to reach the Atari SIG. Write to mailto:xx140@yfn.ysu.edu for more information.

Subject: 5.3) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.4) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.5) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.6) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

8-bit Vendor/Developer home pages are listed in the Vendor/Developer list, not
here.

Subject: 7.9) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by typing irc at your shell prompt and jumping on an EFnet server (irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there, and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if they have gotten that far -- are familiar with IRC, :) and select one of the servers and join #atari8. There is many IRC servers on EFnet, chances are the one your on is on EFnet.

Subject: 8.1) What is the CAIN Newsletter?

The Central Atari Information Network Newsletter is the monthly online magazine of the Cleveland Free-Net Atari SIG. The editor is Mark Leair of the Atari SIG. 8-bit computers support is provided by Michael Current and Craig Lisowski. For information, write to the Atari SIG at mailto:xx004@cleveland.freenet.edu .

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into 100% printable ASCII characters, so that the file may be posted or e-mailed anywhere a text message can go. The 8-bit Atari is perfectly capable of UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that is common in the MS-DOS world. This is done to make the file shorter, so it takes up less space on your disk and it takes less time to transfer between computers. The archives contains several 8-bit Atari archivers fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert
entire disk images into files. To work with .dcm files you'll need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

Subject: 10.1) What 8-bit Atari emulators exist for other computing
platforms?

These are the four emulators that are usable.

1) ST Xformer 3.0, from Branch Always Software, for the Atari ST.
URL:http://www.halcyon.com/brasoft/

2) PC Xformer 3.3, from Branch Always Software, for MS-Windows.
URL:http://www.halcyon.com/brasoft/

3) Rainbow, by Chris Liam, for the Macintosh
URL:mailto:lamcw@aston.ac.uk
URL:http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari Emulator for Unix and Amiga, by David Firth
Latest version: 0.2.1
URL:mailto:david@signus.demon.co.uk
URL:ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80

File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.0 XE (requires 128K) or 1.1 by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen

File Xfer: XMODEM download
Autodial: Yes (2.0 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.0 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.0 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
Beta-test versions of both available from mailto:bruck@brachot.jct.ac.il

---

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad M.Kokoszkiewicz (KMK), mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:

- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe

Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on
each computer. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. (Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25-pin
port.)

The right hand pin on the 'long' side of a female 'D'
connector is #1. There are 13 holes on this 'long'
side, 12 holes on the 'short' side. The numbers go from
#1 on the right to #13 on the left on the 'long' side
and from #14 to #25 from right to left on the 'short'
side. #25 is closest to being under #13. A male
connector is the mirror image of this.

Most terminal programs allow a null connection, without a
carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about
30 feet long, is to use two female DB25 connectors and
some three or more conductor cable. Using the two DB25
female connectors allows unplugging your modem and
plugging in the null modem cable. This also avoids the
confusion of the wide variety of serial port jacks on
different computers. Almost all computers connect into
the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An
850 Interface Module, P:R:Connection, Multi I/O, Black
Box (by Computer Software Services) or similar device
that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a
male DB9 to male DB25 modem cable to connect to your
modem. So why not use this cable as your null modem
cable as well?

For higher speed connections, above about 9600 bps on the
8-bit, you need the flow control lines. You also need
a Multi I/O or Black Box, which use the PBI (parallel bus),
then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C
port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o
25 14

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

Major contributors to this section:

==> Atari 810
SS SD 19.2Kbps standard

==> Happy 810
SS SD Warp speed

==> Atari 1050
SS SD/ED 19.2Kbps standard

==> Happy 1050
SS SD/ED/DD Warp speed US Doubler/19.2 and 52k. track
buffering

==> Super Archiver 1050
SS SD/ED/DD Ultra Speed 50+K

==> Speedy 1050
SS SD/ED/DD 78K mode (European) used w/ Bibo-DOS (Compy Shop)

==> SuperMax 1050
SS SD/ED/DD 19.2k and 52k (ultra speed)
by Super Products. Compatiable with SuperDOS and US Doubler

==> Lazer 1050
SS SD/ED/DD Another Happy clone; Compatible w/ US Doubler

==> Atari XF551
SS/DS SD/ED/DD 38K burst mode usable only with SpartaDOS X,
SuperDOS 5.1, TurboDOS, DOS XE, and patched SpartaDOS 3.2. XF DS system now
considered "standard".

==> CSS XF551
SS/DS SD/ED/DD US Doubler compatible. Updates drive to work
better and faster. Also 3.5" upgrade available

==> Percom RFD4x-Sy
where: x=0 -> a single-sided drive
x=4 -> a double-sided drive
y=1 -> a single-drive unit
y=2 -> a dual-drive unit

==> Percom AT88-Sy[PD]
where: y=1 -> a single-drive unit
y=2 -> a dual-drive unit
PD -> equipped with a built-in parallel printer port

SS SD

==> Trak ATD2
SS SD/DD
Built in Diagnostics. Track indicator. Write protect switch. Built in
parallel printer interface. 2k printer buffer (expandable). Optional
Turbo software on Eprom.

==> Trak AT-1
SS SD/DD Slave

==> Indus GT
SS SD/ED/DD Synchromesh mode usable with SpartaDOS X and
DOSXL only.

==> Astra Double-D?
SS/DS SD/DD? standard /LEDs and such

==> Rana 1000
SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,

chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps

CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps

- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary; full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)

Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition

(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE computers (and other, those have such connector). Tested with various Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50, SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications, demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson, mailto:d.paterson2@genie.geis.com

SIO2PC is a cable and software combination that lets you use your PC as up to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to 16 megs. SIO2PC also lets you redirect the printer output to your PC printer or to a file on the PC. High speed drives are emulated (a la US Doubler).

All these functions are transparent at the Atari end; you never notice the difference between SIO2PC and regular drives, except that the SIO2PC drives are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 4.04 is shareware by Nick Kennedy.
filename: sio404.zip

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where

possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8-16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8-48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16-64K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige & black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was

the first to support a RAMdisk, which Paul Swanson called a "V:" device for "virtual disk". This BBS was written in Atari BASIC and required a joystick hardware "dongle" device. This was notable as being one of the first Atari 8-BIT BBSes that could actually go for a week without having to be rebooted. Pointers to the message base were kept in an Atari "very long string" (for which Atari BASIC is famous). The BBS would only have problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of the commercial BASIC XE cartridge to run. This BBS program was very popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It expects to be running under a SpartaDOS environment. This was a problem until very recently, when the disk-based version of SpartaDOS was re-released as shareware. This BBS program uses a "modem clock string" rather than an R-Time 8 cartridge in order to retrieve the current time. It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE cartridge in order to run. It is in the public domain and can import and export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only, control ATASCII graphics are reserved for message data-structure bytes). FOREM-XE BBS is still currently in use as we speak, and may be reached via the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS, which is the Keith Ledbetter companion project of the EXPRESS!-TERM terminal program of days gone by. I am not familiar with this program. I think that it is written in Action! and only supports XMODEM Checksum transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE-- demo version of the OASIS BBS program. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial programs. I haven't heard anything about OASIS IV and CARINA for a while, but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

234 C

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals & accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cis.ohio-state.edu/hypertext/faq/usenet/atari-8-bit/vendev/faq.html

PL> -----------------------------------

It's already been done. Here's the reference:

"The Atari BASIC Source Book" by Bill Wilkinson, Kathleen O'Brien,
and Paul Laughton, from COMPUTE! Books and Optimized Systems Software, INC.,
Copyright (C) 1983, COMPUTE! Publications, INC. (ABC), A subsidiary of
American Broadcasting Companies, INC.

Atari B.A.S.I.C. source code listing Copyright (C) 1978, 1979, 1983,
Optimized Systems Software of Cupertino, CA

Printed in the United States of America

ISBN: 0-942386-15-9

O.S.S. published the entire source code listing of the ATARI B.A.S.I.C
ROM in 1983, straight from the O.S.S. design team, themselves !

Nothing needs to be disassembled. You can view the actual source code,
itself ! (Pretty neat, huh ?)

: happend. I probably don't know something, so help with it! It's really
: hard to disasemble the Basic code(I don't know about ather resources).

What you need is "The Atari Basic Source Book" ISBN 0-942386-15-9
published by compute books. It was written by the authors of atari
basic and includes a comment source code listing of basic and the
floating point package. The book also describes each (most?) of the
routines and data structures.

and NO I don't want to part with my copy :-)

>>>>
The one you need the most is 9 Volt, AC (not listed). The XF 551's
Require it as they have 'Voltage Doublers' in them to produce 12 DC for the Floppy
Drive Mech's. Of the list, I don't know what needs 12 Volt AC or 9 Volt DC. The
800XL needs 5 Volt DC and the MIO can use 9 Volt DC or AC.

>one just a port of the other?

Pac-Man for the 5200 had intermissions. Centipede for the 5200 had better
graphics. (the 800 version was a beta, according to one of the authors)
Qix was different. Space Invaders was more like the arcade.

>Are there other "port files" out there for games that were developed for the
>5200, but not the Atari computers (Realsports Baseball, Fathom, Moonsweeper,
>Quest for Quintana Roo, etc)?

I've not come across those.

For completeness, I'll list all 5200 ports I'm aware of.

Berzerk
Blueprint (from CBS)
Centipede
Countermeasures
Gremlins
Jr. Pac-Man
Pac-Man
Qix
Space Dungeon
Space Invaders
Vanguard
Xevious

I suspect others, but official ports came later. (ie, Crystal Castles)

Source record: 86144

Ok, here's my situation. I have a 800XL, 2 XF551, MIO, XEP80, (The 1200 baud direct connect modem, I can't remember the model number!!), Mono Monitor, Color Monitor, 386SX Clone, and mono vga monitor, all set up on a table in my bedroom. My problem is how to power everything. Right now I've got about three power strips, and a mess of cables.

What I was wondering was if any had ever thought of building a power supply that would power most of the 8bit equipment. One power supply, with a couple of 5volt DC, 12volt AC, and 9volt DC (I think I got the voltages right, I haven't looked at them in awhile!) jacks. Has anyone thought about this? It looks like you can get most of the voltages from a PC power supply. (And no, I don't want to put it in a clone case!)

622. XL/XE version of M.U.L.E.?

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-02 00:00:00 UTC
From: gbloose@glo.be
Message-ID: <4et983$9nd@rhea.glo.be>
Source record: 86146

There has been lots of posting lately about M.U.L.E. running on XL/XE,
so I tried yesterday _MY_ version of M.U.L.E. on my stock 130XE in
various setup's.
I say _MY_ version because I don't know if EOA released different
versions and if those versions reached Europe or not.
My version has the year 1983 on it.

I. STARTUP.

1) if you start up with BASIC enabled (normal case if you do nothing)
then you get a blue bar at the top of your screen after the first boot
stage and your computer freezes.

2) if you start with OPTION key pressed till the first boot stage has
started to disable the build-in BASIC, then you get to the first
screen.
THERE IS NO NEED TO USE A TRANSLATOR. On the contrary: I tried three
different translators and had problems galore: skipped intro screen,
automatic pushing of fire button etc.

II. PREPARING TO PLAY.

Then you get the to the screen:

"PRESS OPTION TO CHANGE LEVEL OF PLAY "
" BEGINNER "
"PRESS SELECT TO CHANGE NUMBER OF PLAYERS"
" 4 PLANETEERS "
" PRESS START TO GO ON "

As you have only 4 joystick ports on a 400/800, it's only on those
computers that you can play with 4 planeteers. And that's the max in
pleasure and enjoyment. M.U.L.E. was by my knowing the first computer
game that could be played with 4 players SIMULTANEOUSLY and really,
it's quite an enjoyment with 4 in tournament mode. You can play with
less than 4 players, the computer playing the others but the computer
players are VERY strong and VERY hard to beat.

An XL/XE has only 2 joystick ports, and ONE joystick is required! But
you can connect a pair of paddles in joystick port 2, so

on a XL/XE you can play with THREE PLANETEERS!!!

My setup was: joystick in port 1 and two self-made paddles in port 2.
(How to make paddles will follow in another posting).

So press SELECT to reduce the number of planeteers to THREE, change
the level of play if you want and press START to go on.

Then you get the to the screen:

"INSERT A JOYSTICK OR PADDLE FOR EACH PLANETEER. "
"AT LEAST ONE JOYSTICK IS REQUIRED TO PLAY THE GAME."
"PLEASE PRESS YOUR BUTTON TO GO ON. "

Here I encountered a very strange problem: I had to push the buttons of the paddles in a certain sequence or I got stuck at the "STATUS SUMMARY #0" screen:
I tested following combinations:
If I pushed the fire buttons of:
STICK PADDLE-A PADDLE-B NOT OK
STICK PADDLE-B PADDLE-A OK
PADDLE-A PADDLE-B STICK NOT OK
PADDLE-B PADDLE-A STICK OK
PADDLE-B STICK PADDLE-A OK

My conclusion is:

YOU HAVE TO PUSH THE FIRE BUTTON OF PADDLE-B BEFORE THAT OF PADDLE-A!

If you don't do that then the fire buttons of the paddles won't work when you are at the "STATUS SUMMARY #0" screen and you can't get any further, because each planeteer has to push his fire button to go on.

By the way, I tested my M.U.L.E. also on the PC-XFORMERs of D. Mihocka. XF252 and XF32 are OK, XF33DEMO doesn't work (the first screen is mutilated and you are stuck at the start).
What is also very curious is that on the XFRORMERS you have to choose the 800 mode!! If not, when the species for the colony are chosen and the second stage of the boot starts, there is some sort of reset and the build-in BASIC is re-enabled, giving you a frozen computer with a blue bar at the top of the screen.

I hope this lenghty posting helps all planeteers.

Happy M.U.L.E.'ing all you Atarians!

I know that under Linux, I can convert a gif or jpeg to PostScript
using xv, then print that on my non-postscript printer using
Ghostscript.

Doing this on an 8-bit might be a little tricky. The gif2eps part would
be fairly straightforward, but doing the equivalent of ghostscript would
probably be tough.

624. File formats

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-02 00:00:00 UTC
From: crow@coos.dartmouth.edu
Message-ID: <4eruv8$hjo@dartvax.dartmouth.edu>
Source record: 86148

I'm looking for information on various 8-bit file formats. My goal is
to program the file command under Linux to recognize all the 8-bit
formats. So far in my /etc/magic file, I have:

```
0 leshort 0x0296 ATR-format Atari disk image
>4 leshort 256 (double density)
>4 leshort 128 (single density)
0 leshort 0xffff Atari 8-bit binary executable
```

This seems to recognize ATR files nicely, as well as binary files
(though this conflicts with the magic number for ispell files).

I'm particularly interested in the format for BASIC files, though any
other file types would also be nice.

Hey again...

You know, I always wondered if there was an end to that game!
I always thought maybe there was a way out from that room with all the
brick pieces and you could jump to the top of the screen or something.....

I have seen the guy stomping around (you have to jump up, right? or else
you fall and die? ...it's been a FEW years...)

Anyway, I've never finished it if there is one.....

I'm interested if anyone else ever has gotten closer....or finished it!

Hello, I wish to sell all this all at once
so make offer if interested and E-mail me back.

These items are known to be in working order.
Some of these items might have blemishes and might need to be cleaned.

Computers:
(1) Atari 400 computer
(2) Atari 800xl computers

Drives:
(1) Atari 410 tape drive (for use only with the 400)
(2) Atari 1010 tape drives
(1) Atari 1050 diskdrive

Software:
Star-raiders cartridge
Donkey-kong cartridge
Asteroids cartridge
Pac-man cartridge
Space-invaders cartridge
Basic cartridge (for use with the 400)
Zaxxon tape
The crypts of plumbous tape
Writing programs-1 tape
Writing programs-2 tape
introduction to sound tape
introduction to graphics tape
Your atari computer (guide) book
Atari 400/800 basic ref. man. book
Syncalc disk & book
Dos 3 book (no disk with this)

All computers & drives come with power supplys and serial cables.

Shipping info:
I will ship this by snail-mail unless the buyer makes other arrangments
and will ship this from clinton wa. (whidbey island)
If the buyer sends payment by check, I will wait for the check to clear
before shipping the merchandise.

If you have any questions, I can be reached at: secross@whidbey.com
Thank you for reading this :-)

I remember years ago, when I got to that level to the level (after a lot of headache), that it was a big rude awakening. <g>

There was also a trick to that stomping guy. If you were at the top level and to the far right, and jumped one screen to the right, your guy appeared in the inventory section. You could then get extra keys, and swords, etc. Then you jumped back to the left or right (I think) and could get extra points by killing off those other creatures you couldn't get to before. You just had to be careful not to grab stuff you didn't need (e.g. more torches), otherwise you would have no way of getting rid of them!

636. Run BASIC from ML

: out how to get the software and hardware connections to do this myself.
: Is there anyone willing to move these files for me for a price?

Go into the umich archives, via the ftp, www, or gopher connections. In the 8bit, Xf2, or Sio2pc directories, there's a file called myutil.zip. In there is the program called util.exe. Use that to get them to the IBM system. I just used it to move programs from the Atari format to my 486, with no problems. Make sure that the timing hole, not the write-protect hole, is present on both sides, not just one side, of the disk. Otherwise your system won't be able to read the other side of the disk.

Will -

This sounds like Frank Serafine's work. He did a large amount of his work on
'Tron' with an 800. I recall seeing an article sometime around 1982 or 1983
in either Creative Computing or more likely, Byte.

Hope this helps...

All of this goes together,it's a package deal!
For Sale:

Atari 800 w/48K
Atari 410 cassette drive
Atari 1050 disk drive
Commodore 1702 color monitor
Panasonic KX-P1090 printer (80 column,dot matrix,does graphics,
tractor or friction feed)
Ape-Face XLP printer interface (RS-232)

Atari- Atariwriter (cart)
BASIC (cart)
Basketball (cart)
States and Capitals (cass)
Conversational Spanish (cass)
Sublogic- Flight Simulator II (disk)
Koala- Micro Illustrator (disk)
WITH Koalapad touch tablet
Antic(APX Classics)- RAMbrandt ver. 2.0 (Compatible with touch
tablet or joystick, converts MicroIllustrator
files. Also prints files.
All of the above are in original boxes with documentation,
except the 800 and 410, which don't have the original box.
All of this equipment is in good shape. Of course, all cables and power
supplies are included.

You pay shipping. Make me an offer on this system!

Yes, it does. I actually have found one article (since posting that I have
realized that there were two articles: one was the one with the alarms,
etc. and the other was by someone who did sound effects work on "TRON").
At least now I know I'm not going crazy and have a better idea of what time
frame to be looking at. Thanks!

Didn't read the original article, however, the Black Screen on
just about any computer guessing (my expierence), relates to a
Ram problem..

If the Rams are socketed, go through and replace them..if you
only have a couple extra, replace them one at a time until it
comes up..If they are not socketed..then turn it on for a few
minutes..if you don't have any test equipment or are unfamiliar,
then after it has been on for about 3-5 minutes, run your finger
down the Ram chips..if one or more are hot, replace these and see
if it comes up. You can use any 4164-?? speed does not have to
be matched..just keep them above 90ns..ie:4164-10 15 20 all work
fine..

Hope this helps!.

: Ghostscript.

: Doing this on an 8-bit might be a little tricky. The gif2eps part would
: be fairly straightforward, but doing the equivalent of ghostscript would
: probably be tough.

Well, that's extremely true. I wouldn't convert a GIF 2 EPS to print it
on a non-postscript printer. I would for a PostScript printer though!
And now that they are easy to find used under $300, I think I will go
that route. (Although I have to admit to having one already <g>)

But Gif 2 EPSon (like the "on" concat?) might be another very doable project.

10 Slightly less than DEND (Displacement of last line?)
>12 DEND (Displacement of end of file from the beginning of part 2)
>14

Hmmm. On examining all my BASIC files, I found that all begin with
$0000 (what a horrible magic number), but only 83% have $0100 for the
DVNT. Most of the others are from $0101 to $0106, though I have an
example of $006A and $0A0D. Any clues? (Unfortunately, I can't run
these programs right now, or I would verify that they really work.)

What was the hack to make programs unlistable?

Actually, there was one that I remember (aside from the graphics occasionally messing up): pilots are supposed to be scattered all over the landscape. Yet in BJL there are times when all the pilots are located in 2 (yes, _2_) locations. You go to one location, grab the pilot, blow up his ship, go to another location, do the same thing, and voila! there's another pilot at the previous location. You keep going back and forth until you pick up all the pilots (including the bonus pilots) and these pilots are ALWAYS human. Once it stops, you pretty much had all of them, so you knew any other pilots were aliens 8-). Also BJL was always during the day, if I remember, as opposed to night and day shifts.

I've never actually seen or used any of the conversions. However, I
did recently read info on 5200/8-bit differences in a FAQ somewhere
around here. Try the Classics homepage, or some of the other 8-bit
pages or archives.

A rough answer from memory though: There is very little difference
between a 5200 and an 8-bit. A few areas of memory were remapped to
different areas (like the cartridge area, as I recall). That type of
stuff would be easy to hack, I imagine. But, yes, the joysticks were
quite different in that they combined analog joystick (using pot
ports) with keypad (using the 8-bit joystick I/O lines) and two
triggers (as in the trackball or touch tablet). Converting all of this
to standard joystick control must have been where most of the
creativity in the hacks came in, and I too would be interested in how
successful they were. Some of the official arcade releases showed
obvious weakness in this area (Pole Position is in dire need of
proportional steering, for example).

656. Manual Disk Drive Alignment

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-05 00:00:00 UTC
From: Bob Klaas <bobkla19@mail.tcd.net>
Message-ID: <4f5fli$7jq@news.tcd.net>
Source record: 86081

Had someone ask how to Align a 1050 or an Indus disk drive. They are usually done with a Scope and Alignment Disk. They can be setup, manually and will function properly if you have a little patience.

You have the drive taken apart where you can get to the mech, now you turn it over on the bottom twards the back left hand side is the stepper motor, has a screw locking it into place on 2 sides, take a knife and mark the position it is originaly in ie: scratch a line from the stepper holding bracket to the mech base..this give you a reference point in case you move it too much..now loosen the screws holding it in..I am assuming you have it on load a rpm tester..if you have to then load it from another drive set it to test the drive you are working on..

Turn up the volume on your monitor so you can hear the beeps/tone move the stepper motor slightly to eliminate the beep, then move it back the other way into the beep, and through it where it is no longer heard. Now move it back the other way..you will notice that there is a short span from where it starts and stops..Set it in the middle of this span..lock it down with the screws..load up flight simulator..and if it goes through to start of flight you have gotten it correct. If flight simulator does not load notice the lines on the screen..if they are high move the motor in the same direction you did the first time only slightly..try it again if they are low move it in the oposite direction.

If you do not have flight simulator then find the file that will let you set the drive to track 0, 16 and above..use the same method, set it first at 0, then on 16, and 37..when you have set the stepper in this mannor then it will read your disks it couldn't read before...Unless they were written on a drive with a bad alignment to begin with..

Hope this helps..
Bob

>use a different joystick configuration than the Atari computers?

The 5200 had between 2 and 4 analog joystick ports. Each joystick has
a 12-key numeric keypad and a PAUSE, START, RESET button, and four fire
buttons (top and bottom on the left and right side). Most people hate
these controllers... but I love them (I still have my 5200).

"Glenn the 5200 man" ported most of the games. The final stage of the
port process would have to have been to rewrite the controller code. This
shouldn't pose too much of a problem once you've figured out how the
games get their controller information.

>Were there any differences between a game that was devloped for the 5200 and
>one developed for 800 family (e.g. Pac-Man, Joust, Moon Patrol etc) or was
>one just a port of the other?

Early versions of games for the 800 rarely had all of the graphics or features
of a later 5200 version. For example, Centipede for the 400/800 was very poor
when compared to the 5200 version. However, this is not due to hardware
limitations of the 400/800, it was due to time invested on the project. You'll
note that games like Ms. Pac Man and Pac Man are nearly identical.

it does the same thing on the old 400/800 as it does on the 800XL
I can get the copy I have to get past the demo into the user
section but the Joy stick section does not function..Will look as
I think I have another original of it somewhere. I can use a m/l
compare file and fix what is wrong provided the other copy
functions properly..sorry for the miss-information on the
previous post. Will let you know what I find out..

663. The Last Star Raiders

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-05 00:00:00 UTC
From: halliwee@ts436.dyess.af.mil
Message-ID: <31163728@syrinx.dyess.af.mil>
Source record: 86088

On Thu, 1 Feb 1996, Dennis McGuire <mcguired@moose.erie.net> said:

> What were the differences between Last Starfighter and Star
> Raiders II?

The Last Starfighter:
Title screen of Gunstar taking off (based on title screen of Last
Starfighter arcade game from the movie)
Refuel by warping to the sun, then getting out before you melt
Can move forward and backward while in orbit around planets
Invaders must break through the Barrier before they can get to your
planets.
If you get to an enemy invasion fleet before it encounters the Barrier,
you have to fight its Barrier-buster ship (which is HUGE, and packing
heat!)

Star Raiders II:
No title screen.
Refuel by warping to one of three space station around the edge of your
solar system (I don't think these can be destroyed)
Forced forward (can speed up/slow down) while in orbit around planets
No Barrier, no Barrier-buster ships
Can call up a graphical damage report/shield status on your radar screen

You know, all this talk about Star Raiders makes me wonder WHY there
was never a true update to SR released for the 8-bits. The closest thing
I ever saw was a prototype called Shadow Hawk I, which I'm pretty sure
was never completed. Xtal was kinda Star-Raidersish, as were several
other mock-3D shooters. But you'd think in the 8-bit's 15+ year history,
someone would have managed to top one of the very first games
released for it. Heck, Doug Neubaer, the author of SR, freely admits
he didn't even know very much about 3D math when he wrote the thing!

I bet any one of those euro demo groups could whip up a killer Star Raiders
clone in a month. However, that would mean they had created something
useful, which seems to be against their religion. ;-(

I read an interview with Doug in a 1986 issue of Analog Computing
and he says Atari never approached him to do a sequel to SR, either
for the 8 bit or the ST.

That's typical Atari management for ya. They have a guy who writes a
monster game basically in his spare time, a game that puts the 8 bit
system on the map. They don't pay him for it, or give him credit,
and don't even ask him to write a sequel.

If you have a PC there is a pretty good update called Star Rangers by
Interactive Magic. Bill Steally, the former head of Microprose and
now CEO of IM, said that Star Rangers was written to pay homage to
Star Raiders. It follows the original game pretty closely in terms of
game play and excitement. Of course it has a little bit better
graphics (SVGA) and sound. The original is my all time favorite and
I've suffered through many 'attempts' at updates, but Star Rangers
comes closer than anything else I've played in 15 years.

I don't know whether that's correct, or complete, but I do have corrobora-
ting evidence. If you run a program that uses the "standard" "Atari Rain-
bow" color-bar effect, with a paddle controller plugged into the first port,
and turn the knob, you will often note (depending on how the effect was
programmed, I suppose) that the position of the paddle-controller knob af-
fects the "bottom limit" of the rainbow effect! That is, the "rainbow"
effect is seen down to some "lowest line" on the screen, below which the
color register which SHOULD be "rainbowing," ISN'T. Either DLIs get shut
off below that line, OR some register from which "color" values are being
copied ceases updating at a screen position directly determined by the
paddle-controller knob position (potentiometer resistance value). I ex-
pect that "incrementing a register until it reaches the resistance value"
might be a pretty standard A-to-D conversoin technique, but I find it
significant that the incrementing appears to be SYNCHRONIZED to the video
signal's vertical line counter. It certainly seems clear that there's at
least SOME kind of connection between the video and paddle-reading
facilities.

> computers... the only one I haven't seen, because somebody stole the
> last cartridge from the computer fair back in 1989; I assume the
> controls were like the 2600 VCS version:

The game Battlezone, an Atari arcade game (from 1980) is a personal favorite of mine.

I would be interested in any comments/rememberances/information about this game (as played on the 8bit).

Also, I would be interested if anyone had a disk or cartridge for sale <g>.

Thanks to all.

All this talk about an Atari 850 Interface reminded me
that I happen to have one sitting in a box in my
closet. I'm not using it, if anyone needs such a
beast write me e-mail and make me an offer.

Heck, it's only 7 inches by 3 inches by 5 inches
or so, and doesn't take up much room... but if someone
needs such a piece of hardware I'd rather that they
have it.. ;)

>(It looks alot like a scramble clone)
>
>Aaron Howald

I believe you need to hold down the option key(i.e. make sure there are
no cartridges in the machine(including basic which is in ROM on some
machines if you don't hold down option). If the game thinks there is
something fishy going on it will ignore the joystick and no music will play
on the main screen(I believe). It is like scramble, but nothing is fixed
in place, it uses probabilities and rhthym instead. Also if you have a virgin
disk and leave it unwrite protected it will slowly evolve and new
objects
will appear after you have had it for a while(But only a fixed number of
them[didn't use GAs then]). I wrote it on an Atari 400 with a cassette
drive (no floppy, no hard disk) with little information available on the
atari guts. I used an assembler on cassette, and had to spend a few hours
saving my work each time I wanted to test anything. I also created a unique
musical language that Gary Gilbertson used to compose the music. All in all
I was very happy with it when I wrote it in 1982-1983. I lived in a plywood
shack on a bed livid green with mold, no running water[showered down at the
local outdoor showers at a beach], got power to run the Atari from my
shackmate's jeep[you need one to get out in the country were that shack was]

: :-)

You have to kill all of the flys/bees lurking around.
Yes it's hard to aim with the pellets and if you miss you have to wait
until it destroyes something else because you can only throw one pellet
at a time.
I tried this in late 80's but I always thought the game (or my disk)
had a flaw because some of the flys/bees couldn't be hit at all.

Erase the contents of the variable name table. It's used only when
listing and editing programs. In the main body of the program, each
variable name is represented by a one-byte token. Of course, there were
also programs to make Basic listable again.

674. Setting a up BBS Express Pro! (need help)

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-06 00:00:00 UTC
From: RLCOLLI@IBM.NET
Message-ID: <uY2FxksjY1VR088yn@IBM.NET>
Source record: 86099

My girlfriend teaches first grade, and I'm in the process of setting up one of my 8-bits in her classroom. I would like to set up a BBS that runs in local mode, and allows her students to send e-mail to each other. One of my recent purchases came with a full copy of BBS Express Pro!. I have the docs, but am having problems, specifically:

-The disks are marginal, does anyone know of a way of saving them. (I was going to try my copy of Backup Master, but haven't had a chance yet)

-Will BBS Express Pro! work in local mode?

-Will it fit on a 130K floppy, if I just want e-mail?

-Does anyone have some straight forward directions for setting this up? The docs are very confusing.

Thanks!!!

In the latter days of ANALOG, there was an article on building an
uninterruptible power supply (or just plain battery) for Atari XL/XEs.
It gave some clues on using DC supplies to power the 1050 drives ---
there are some points inside the drive that you can directly connect
+5v and +10v or +12v.

I don't remember exactly which issue, or even if it mentioned the
XF551, though.....

Don't forget also Super Pacman. Whoever wrote the orignal game did a very good port of the Arcade version. As for a article for the differences between a Atari computer and the 5200 I recommend the article that appeared in Analog. It was titled "TRANSFERRING 400/800 PROGRAMS TO THE 5200" or something like that. It was written by Patrick Bass. Very good article. He mentioned in his article about making a disassembled listing of the boot rom in the 5200. This was very tricky. I must of had about 15 5200 ROMs that I tried to read with my Super E-burner. I could never get anything that represented actual code to appear. Until I studied the schematics of the 5200 and realized that the chip select pin on the ROM needed to be clocked! Once I tied that pin to a clock signal off the super e-burner, I managed to get the code. Just thought I add this in-case someone else runs into the same problem.
If someone needs the article, I can make a version that I can email if anyone is interested. Email me a GBRUNER@EWORLD.COM.
Later,;-)

Source record: 86010

As long as we're so far off topic, .8bit, I decided to take a look at the 5200 ROM/chip locations. I'm reading the rom on one computer, transferring the file via sio2pc to an OMNIMON equiped 8 bit, taking notes while I do the disassembly, & finally typing this on a clone. => there may be a transcription error somewhere in the process. For the weenies that will flame me for typing a LDA $08 when I meant a LDA #$08, I hope a bird poops on your head. You are really not contributing anything to the discussion, just inhibiting the free flow of information. I appreciate corrections or additions, John Harris, since he's probably the most knowlegable one here may even recognize some code frags as belonging to a specific chip. Enough said.
Anyway, the ROM really looks like a 2532, at least that what I read it as. The problem with this is from $000-$7FF it was nothing but $FFs. This could mean one of several things, not the least of which is that it isn't a 2532! What I'm betting on is it was really a 2532 & Atari just had a lot of these lying around so they decided to use them. ROMs in general start as $FFs & you program them from there. I didn't bother to check the hardware much, so it could be the ROM was only enabled for memloc $F800-$FFFF or was enabled for $F000-$FFFF with the $F000-$F7FF available for future expansion aka the 800 OS. This is not just convention on a 6502 based machine, ROM in that region is absolutely necessary since that's region where the cold start vectors are, no other way to do it AFAIK. On with the show! I'll try to adjust the ROM memlocs to where they would be in an actual 5200. As I said, the region from $F000 to $F7FF was all $FFs, but I immediately recognized the area from $F800 to $FBFF as a character set. Just as a starting point, I disassembled $FC00 & found JMP($200) I figured the interupt vectors may give the chip locations & it looks like PAGE 2 is the vector table. I searched for a STA $200,X in the ROM region, sure enough

```
memloc
$FD48 LDX #$0B:LDA $FE95,X:STA $200,X:DEX:BPL $FD49
;=>$B/2 vectors located at $FE95 & transferred to $200 so
;$FE95 [$FC03, $FCB8, $FCB2, $FEA1, $FD02, $FCB2]
;I think there are something like 25 page 2 interrupt vectors in an
;800 as well as the timer vectors!
$FC03 PHA:BIT $E80E:BNE $FC18:LDA #$DF:STA $E80E:LDA $00
STA $E80E:JMP($210)
;=>OK, I'm pretty sure this is POKEY at $E800! Haven't looked for the
;code that initializes memloc $210 yet, remember this isn't an 800
$FCB8 PHA:TXA:PHA:TYA:PHA:INC $02:BNE $FCC5:INC $04:INC $01
LDA $03:BNE $FCB2=>this memloc is also in two places on page 2
LDA $06:STA $D403:LDA $05:STA $D402:LDA $07:STA $D400...
```

;OK, hardware at $D400! The $D402-3 is probably an update of the
;DL vector from ram=>$D400 is ANTIC just like an 800
$FCB2 PLA:TAY:PLA:TAX:PLA:RTI; OK, canned code for returning from an
;interrupt, so there's at least 2 vectors set up on page 2 that
;just clear the stack & return, similar to how DLIs are
;initially set on an 800
$FEA1 PHA:TXA:PHA:TYA:PHA:LDX $08:LDY #$72:cpx #$10:bcs $FEB0
LDXS #$FE:STX $D40A:STX $C016;Hardware @$C000! Antic & POKEY
;are done deals=>GTIA? Could be the attract mode being set based
;on system timers on page 0.
That's it for the LSI, [ROM, POKEY, ANTIC, GTIA] & unless they did
something really unusual, ram will be from $000 to $3FFF. There's also
a bit of conclusive data on ANTIC. There's a LDA #$F8:STA $D409 which
is ANTIC's character set base register. I didn't bother to see if
there is a RAM shadow location for CHBAS. The only other thing, cart!
I found a LDA $BFFD:CMP #$FF:BNE $FD32:JMP ($BFFE). OK, I don't know
how big a 5200 cart can be, I thought something huge like 32k, but at
least the probably location for the INIT/START code is $BFFE. This
sort of makes sense, the ram runs from $0-$3FFF, Hardware/ROM from
$C000-$FFFF, that leaves the area from $4000-$BFFF available.
I make it:
GTIA @$C000
ANTIC @$D400 which makes sense since its silicon naturally decodes to
$D4xx
POKEY @$E800
ROM @$F000-$FFFF
RAM @$0000-$3FFF
CART @$4000-$BFFF
& a 6502C in there to control this puppy.
Rick

After years and years of waiting, the XEGS Battlezone cart was a major
disappointment. First, it runs in Graphics 6+ (160x192x2 colors). Second,
instead of treating the tanks/obstacles/etc as real 3-D objects, they're
pre-
rendered at various degrees of rotation, which results in choppy rotation
and completely hosed perspective when you move toward/away from objects.
And with all these cheats, it's *still* not very smooth or fast.

A much, much, MUCH better Battlezone-type game is Encounter, by Synapse.

Have you checked with B&C Computervisions in Santa Clara. I remember Bruce showing me one of those cartridges at one time. Expect a hefty price tag though. About $400, that's if he still has some left.

: Heck, Doug Neubaer, the author of SR, freely admits
: he didn't even know very much about 3D math when he wrote the thing!

It shows. Ever noticed that, in the original Star Raiders, you can have an enemy photon torpedo coming straight at you, and can then avoid it simply by turning? Even when you're motionless?

The reason for that is that in Star Raiders, the program rotates positions but it doesn't rotate velocities. If it _had_ rotated the velocities, the game would have been amazing and a lot more difficult to play because you would've been forced to fight on the run. I don't know -- maybe this would have caused a lot of difficulties in the programming.

I wonder if it would be possible to add a little subroutine which would accomplish this? Not knowing _anything_ about 8-bit assembly programming, it's beyond my ability.

>
>TIA, Phil
>
I have tested several of these XG-1 lightguns. Some of these are
somewhat inaccurate. The problem is that most software simply does not
bother to calibrate the gun to your television set. Therefore the gun
is usually up to half an inch off. It would be simple to put a dot on
the center of the screen and have the user shoot at it. Most programmers
decided to test it on their own system, and assume all Atari's are
created equal. A calibration would therefore not be needed. Boy are
they wrong! The sensitivity is a matter of turning up the brightness on
the monitor. Most games make the screen flash when you shoot in order to
better "see" the screen from the lightgun's perspective. One reason that
I strongly dislike lightgun games. You should still be able to shoot at
the length of the cord away from the screen, about 3 feet or so.
Is there any good lightgun shareware out there? When Atari cleaned out
their wharehouse here, they found a few dozen XG-1's, so quite a lot of
us purchased one. They were $3 at the toy shop here. Needless to say
they were soon sold out! Most of us are looking for software now.

Don't forget, this man has 2 major projects he works on, and he doesn't exactly have a secretary that can answer you questions. If you want updates, and a good product, you'll have to give him time. I was a bit impatient myself. But I think that is one of my problems, as is most of society. Let him get the bugs out of Gemulator and and let him work on PC Xformer 4.0 (for Win 95). That way when you do get an update, it won't be an inbetween buggy beta. If people had only given Mircosoft more time with Windows 95 inthe first place, they may have released a much better product also.

NOWNOWNOW!

692. Re: bincancel:6 large binaries:AR118:@@NCM

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-07 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-118.a@redpoll.mrfs.oh.us>
Source record: 86104
Cross-posted to: news.admin.net-abuse.misc,comp.periphs.printers,comp.sys.atari.8bit,misc.taxes,rec.autos.simulators

Binary posts do not belong in unmoderated discussion groups.

I have issued 6 cancels for large binary files (average size 467,862 characters - total size 2,807,177 characters) posted to 4 different unmoderated discussion groups in the comp, misc and rec hierarchies as follows:
3 rec.autos.simulators
1 misc.taxes
1 comp.sys.atari.8bit
1 comp.periphs.printers

This pointer is being posted to each affected group.

Each of the groups listed above is an affected group, meaning that at least one binary file was canceled from that group. If you want to see exactly which file that was or the criteria that I used to select it, read the full report in the newsgroup news.admin.net-abuse.announce. The full report is the parent article to this message, and has the same subject. It has been cross-posted to alt.nocem.misc and alt.retromod.

There has been a long-standing consensus among news administrators that binaries belong in binaries newsgroups, and not elsewhere. There also seems to be a consensus supporting the cancellation of large binaries in discussion groups as long as appropriate protocols are followed.

In my opinion, the best way to distribute binary files is via ftp or the web. With the ready availablity of ftpmail servers, even uucp sites can retrieve binaries from ftp sites.

However, if you really must post a binary to Usenet, please post it to an appropriate binaries newsgroup such as alt.binaries.misc. Then, if you like, post something in the appropriate discussion group telling people where to find the binary in the binaries group (a pointer to the binary). This will permit news administrators and users to decide for themselves whether to receive the binary files.

Please direct public feedback to news.admin.net-abuse.misc and private feedback to myself at red@redpoll.mrfs.oh.us. If there is an unmoderated binaries group in the hierarchies that I scan, I don't know about it yet. Feel free to enlighten me.

Best wishes,
Dick

I have an Atari 800 computer with an Atari 1050 disk drive along with the Atari program recorder for sale. Everything works although I have not used it for over a year. I'm asking $200.-, which includes a few game cartridges; Star Raiders,Frogger and Kids on Keys which is a beginning typing teacher for little kids. A joystick is also included as well as 3 basic language self teaching guides. Also included in this price are (2) two Mannesman Tally 9 pin dot matrix printers, Model MT-160. They are both operational and need only a new ribbon each. I hate to throw this equipment away.
If you have no use for this, please pass this message on to persons who might be interested.

Thank you,
CenCalJoe

Source record: 86022

I found I still have a couple of ATARI 8 bit books.

Atari Basic by Richard Haskell, a 175 page 8.5x11 paperback, Prentis-Hall, original price $13.95, asking $1 plus postage.

Atari Basic-- Better & Faster, by Carl M. Evans, a 300 page 8.5x11 paperback, IJG, original price $15, asking $2 plus postage.

Both for $2.50 + postage. Give me an address, I will mail, you can send me the money with postage later.

I also found I have an Atari 800, working, but without memory cover. I sold the memory out of it. It has a power supply. $5 + shipping, the above conditions. No books or other stuff.

Several joysticks, working, various brands, and paddle controllers, say $1 ea?

gbruner@eworld.com (GBruner) writes:

> Don't forget also Super Pacman. Whoever wrote the orignal game did a
>very good port of the Arcade version.

I *think* you are confusing Super PacMan with Jr. PacMan.

As I understand it, Super PacMan was developed for the 8bit, and never released (but it leaked out). I suppose it would have been ported to the 5200 eventually if it had been released, and made during the correct time period (when the 5200 was still supported).

And, my impression is that Jr. PacMan was developed for the 5200. I think it also leaked, and was ported to the 8bit (presumably by Glenn the 5200 Man).

I've seen Super PacMan, and it is indeed a very good port. Supposedly, more than one version may have leaked out. One version may have bugs in how the keys and doors are set up, resulting in the maze being unfinishable after just a few levels. I cannot verify this.

I haven't seen 5200 Jr. PacMan, and cannot vouch for the game's quality. The 2600 version is very nice.

Can anyone dispute or verify any of this, and write it into an appropriate FAQ or something?

Can anyone help me track down some of the following Atari 8 bit Games also
some of the earlier programmers.

DataSoft advertised in 1984:
HECKLE AND JECKLE
GUMBY
MERIDIAN 111
MANCOPTER

In 1985 when DataSoft went into liquidation they advertised :
POLE POSITION 2
ELEVATOR ACTION
BLACKMAGIC
MIND PURSUIT

In 1986 /88 taken over by Intelli creation.
TERRAMEX
HUNT FOR RED OCTOBER

Datasoft programmers who translated several progams include
Greg Hiscott & Kevin Shapiro

ROCKLAN also anounced games on cartridge never seen in the U.K.
ROCKBALL
EYES
SPACE JOURNEY
PICTURE PARTS
PYRAMID PUZZLER
STAR MAZE
NUMBER BOWLING
I am also looking to locate any of the Summer Games programming team:
Randy Glover
Stephen Landrum.
Jon Leupp.
Brian McGhie.
Stephen Mudry. What happend to Summer Games 2 and Winter Games
Erin Murphy.
Scott Nelson,

If you think you can help please give me a call
Thanks

```
The latest version of this emulator is now available at:-

ftp://ftp.demon.co.uk/pub/emulators/atari/Atari800-0.3.0.tar.gz
(158.152.1.44)

Changes in 0.3.0
----------------

- Support for Atari 130XE memory banks (Antic currently accesses the
same bank as the CPU)
- XVIEW Exit item on the Disk menu.
- Printer device calls tmpnam() to allocate a temporary filename for
the spool file.
- XView version didn't enable HELP key for XL and XE emulation.
- X11 Backspace keys works in the same ways as the Delete key.
(Thanks to Cyrus Malek)
- Reset and Coldstart now work during XL and XE emulation.
- Added OK button to XVIEW controller and performance dialog boxes.
- Optional support for X11 Shared Memory Images resulting in a 32%
speed improvement. This option can only be used in conjunction
with the small screen display. Type make by itself to obtain
the new list of targets. "-shm" target extension enables this
option.
- Simple configuration program to avoid editing the Makefile as ofter.
make will invoke it the first time and afterwards "make config" can
be used. It currently handles the directories for the H: device, the
disk image directory for the XVIEW file chooser and the command used
to send a file to the printer. The print command should contain a %s
character sequence where a filename is expected (only the first %s
is relevant).

707. Atari 8-Bit CD Etc.

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-08 00:00:00 UTC
From: rvega@toltbbs.com
Message-ID: <AD3FDE509668B186E@dialup-108.toltbbs.com>
Source record: 86032

Right around the time we moved I received a mailing about a CD full of archived Atari 8-Bit shareware and freeware. I think it was mostly, if not all, games. Neadless to say, it's lost. Does anyone have the address, and hopefuly email address, that I can send for it.

I know I'll take it between the eyes for this, but I'd also like info on a place,or site, for getting some of the out of print commersial games. I still have a lot of them, but CP was high in those days so they won't transfer. I'm not a hacker and most hacks were copy programs. Not to mention that I've never gotten any of the transfer packages to work on my PC or Mac.

Thanks...
Rick

I have had an atari 8-bit for many years, recently a fire destroyed all my computer hardware and software. I just purchased an IBM and know of the atari emulator xfm, but need help replacing tons of software. Does someone still have programs like Archon, Adept, Mule, Necromancer ect.

I have just about every piece of software ever made for the 8-bit.

Can someone help me please.

Rick

"Sector copier" is a generic term for a disk copying program. I don't know if there's a specific program by that name. And there were many methods of copy-protecting disks, so I don't think any one Basic program would work for all of them.

Using a Syquest EZ135 SCSI external right now with my 8-bit 130XE and Black Box! Works great and the drive is quiet and extremely fast. It replaced my 44-meg Syquest. Simply had to DOs-level format my partitions and away I went! I use it as my boot drive (D1) formatted with SpartaDOS 3.2g! It takes just under 2 seconds for SpartaDOS to boot from a standing start off of the EZ. Wow!

(Asks how to run a program on his 800.)
Well, I guess you have to have a diks drive.
If you have that then probably the next the is to get it up.
If you can stick it in, then probably it'll come up.
You may need to lubricate it some first, since it's old and may be a
bit dry.
So, there you have it. Get it up, lubricate it, stick it in.
Oh, yes. Turn it on. Now some people like to turn it on before you
stick it in and some people like to turn it on after you stick it in,
in which case, refer to lubricating above.

>please let me know. Thanks!
>
If you still have the manual that came with at least one of your printers,
most printers have a dip-switch setting to perform a line feed after
carriage return. Some Atari software, such as Textpro, also has an option
to add line feeds. If your printer interface is an MIO, you could turn on
line feeds in the setup menu.
(PS: If you have to experiment to find the correct dip switch on the printer,
some printers only check the switch settings when power is first turned on).
Your Epson FX printer might be similar to my Epson T-1000. It has 12 dip
switches and the line-feed switch is the last one on the right.

You connect SCSI drives to an 800XL or 130XE computer by using a Black Box or MIO (not the MIO II, that's for IDE drives, if it's ever released. Has anyone heard from Mike Hohmann of FTE lateley?)
The MIO only works with SCSI drives which can be formatted for 256 bytes per sector. I think it will work with a Zip drive, but I'm not sure.

>
> TIA, Phil

I owned a light gun a couple of years before and a light pen, too.
I never used the gun but I programmed a bit for the pen and I found out
that using the pen led to little inaccuracy when drawing some pictures.
So it is easy to see that the gun must be more inaccurate than the pen,
because the latter is next to the TV and the gun is farer away, so the
inaccuracy increases...

Yes but just remember that each of the 3 computers uses a
different formating method and one can't be read by the other.

I am running a Syquest SCSI EZ135 drive quite successfully from my Black Box. By the way, the EZ135 drive comes with the parity disabled, not enabled.

What version of the BB software are you using? The newer versions will auto-detect a properly cabled and terminated! EZ135.

I can provide more details.

I think it would be very kool if Koronis Rift (or -alike) was ported
to the current set of computers. I loved KR as well, it was a Very Kool
Game and there was always something better "around the corner". It did
somewhat lack an end goal however. It was fairly repeatitive, but hey
for the 8bit it was an awesome piece of work! As well as Rescue..Fractalus!
The game really doesn't need much added to it to make it addictive again.
I would still be Very interested in knowing how they managed those fractal
landscapes in real time! There was no doubt a lot of data-trickery to
get it working that fast, but I'm still confounded by how they did it.

I'd also find a KR-FAQ of some interest... ;-)

SteveR's Classic Carts

We are now looking to increase our cartridge inventory.
We are looking for ALL Old Video game cartridges.

Atari 2600, 5200, 7800, 400/800
ColecoVision, Intellivision, Odyssey
Vectrex, Arcadia 2001, Astrocade, Channel F
Sega, Aquarius, MicroVision, Spectravision,
and old LED Hand-Held Games.
Old Electronic Games Magazines (1984 and before)

Paying $1-$50 for EACH Cartridge
depending on rarity of the title.
Please E-mail with cartridge list that you
are interested in selling.

-=-

Atari Games 2600/5200/7800 $1.00 Each and up
ColecoVision Games $1.50 Each and up
Intellivision Games $1.00 Each and up
Odyssey 2 0.50c Each and up
Vectrex Games $3.00 Each and up
Vectrx MACHINE $20.00
Channel F games $1.00 Each and up
Channel F MACHINE $20.00
Bally's AstroCade games $1.00 Each and up
AstroCade MACHINE $20.00
Emersons Arcadia 2001 games $1.00 Each and up
Arcadia MACHINE $20.00
HandHelds $3.00 Each and up
-=-
Atari 2600 Most Wanted games
2 pak carts by HES $5
32 in One $5
64 in One $20
Acid Drop $5
Action Force $5
ALL ADULT TITLES $10 each
ALL Xonox DoublerEnders $5
ALL Titles by 'BOMB' $10 or more
ALL Starpath Cassettes $5
Assault by BOMB $10
Atari Video Cube $5
Bachelor Party/Gigolo $20 its a 2 in 1 cart

Base Attack $10
Boing! $10
Bumper Bash $15
CakeWalk $25
Chase the ChuckWagon $25
Coke Wins $50
Color Bar Generator $10

736. ATARI equipment, MUST SELL, RE-Post!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-10 00:00:00 UTC
From: starfleet@bbs.freebbs.com
Message-ID: <TCPSMTP.16.2.10.-16.22.48.2713246854.73743@bbs.freebbs.com>
Source record: 85964

I had an inquiry as to if the ATR8000 is still available...

This equipment MUST BE SOLD!!!!!!

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $100.00 or best offer.

ATR8000 64K CP/M computer, for use with Atari 8-bit computers or Dumb (IBM computer) terminals. Runs all CP/M 2.2 software, supports up to 4 disk drives, any size, any density, 8 inch, High Denisty 5.25 and 3.5 floppies, any IBM compatible printer, modem port for using any RS232C compatible external modem, includes Auto-Term Disk for Atari computers, CP/M 2.2 Master Diskette, several CP/M disks, ATR8000 Manual, MY-DOS master Disk, CP/M Supplement Manual, modem cable, printer cable, original cost $695.00 for the ATR8000 Basic system, printer cable $39.95, Modem cable $39.95, asking $100.00.

Dual Floppy Disk Drives in case with power supply and cooling fan, connecting cable, for above ATR8000 or any IBM compatible computer. Case can hold 4 half height 5.25 floppies, original cost $895.00, Case alone is worth $89.95 at most supply companies, asking $65.00.

Both ATR8000 and Dual Disk Drives, $135.00

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers. Upgrades and replaces the 6502C in the computer with the 16-bit 65C816 CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up programs as much as 350% faster. The 65C816 processes 4 instructions per clock cycle (Only the new P6, 80686 Intel chip does that, besides this), as compared to the 6502 which processes one instruction per clock cycle. Original cost $249.95. Includes T816 assembler $75.00, Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks, valued at $25.00 each. Asking $250.00 for the entire package.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $50.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

If you need to make charge card payments, you can charge your home phone!

Need this info to process this:

From: "Ernest.R.Schreurs" <ernest@pi.net>

We are happy to announce the availability of the "POOLDISK" CD-rom
for the Atari XL/XE computer. This CD contains the contents of
over 2000 diskettes. Everything is stored in the ATR format as used
by SIO2PC and APE. This is also compatible with the format used by
the Xformer. There are some 250 Megabytes of ATR images on the CD.
To accomodate the Atari ST users, all images are also stored in the
XFD format as used by the ST-Xformer. This occupies another 250 Mb.
These disks include over 250 diskettes from ABBUC, and over 330 from
the BELLCOM PD library. There are also lots of disks from usergroups,
magazines and disk magazines. The Umich.edu 8-bit archive has also
been converted to the ATR format and is now stored in over 500 disk
image files. There are also some files not in ATR format on the disk,
for those that want to try and write an ISO-9660 driver for the XL/XE.
Until someone manages that, you need a PC or an Atari ST to act as
a server for your Classic Atari, or one of the emulators. The
remaining 100 meg of the CD is filled with 165 pictures from various
Atari 8-bit systems and peripherals. This CD is now available from us
for US $ 35, which includes shipping by the cheapest possible rate,
which may take over two weeks. Send a check drawn on an US bank to:
Ernest R. Schreurs
Kempenlandstraat 8
5211 VN Den Bosch
The Netherlands
Make checks payable to Ernest R. Schreurs. Do not fotget to mention
the mailing address, so we know where to send the CD to.
If you cannot send a check, US $ 35 in cash is acceptable too, but then
it is your own risk. If the money does not arrive, we will not know
that you sent any. If the check or the money gets here, we will ship

the CD as soon as possible. A few notes: some of the disks are in
German, Polish or Dutch. As far as we know, everything on the disk is
Public Domain or Shareware, except for the Pokey Magazines and the
Mega-Magazines, which are on the CD by permission, and are restricted
from further copying. You are responsible for whatever is copied off
the CD, if we accidentally placed anything on the CD that is not PD.
If the Jewel box cracks during shipping, this is your own risk. After
all, a new one costs under $1.
If you have any questions, send an E-mail to ernest@pi.net

738. BBS support for 8-bit

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-10 00:00:00 UTC
From: darchyld@harold.eastky.com
Message-ID: <824062114_OASIS_@harold.eastky.com>
Source record: 85966

Hi everyone,

I'm in the process of setting up a BBS using BBS Express! ST...I'm
your typical Atari fanatic with a Falcon, STe, Jaguar, Lynx, etc, but
like so many of us I started out on an 800XL and still have (very) fond
memories of that machine...BBS Express! ST has an option for 40 column
support and I want to support 8-bit machines so I intend on using it.
Here is my request: anyone who runs an Atari BBS and supports 8 bitters,
would you please post some hints/tips etc,...on how to setup menus 'n
stuff so they will work best with 8-bit machines. For example-does the
8-bit machines support anything like V-52, ANSI, IGS, or are they limited
to Ascii? Thanks in advance for any input/info etc,...

739. Discovery Channel

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-10 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <311d1c76@pianosa.demon.co.uk>
Source record: 85967

Whilst reading the usual rubbish I find here, John B. Byrne wrote something
interesting to All about Discovery Channel:

Hello John,

>> Apparently, on the January 18th episode of "Invention" on the Discovery
>> Channel, they'll be running a segment on the origin of video games.
JBB> Since I got this message after that date, did you see the show? If so,
JBB> care to comment? Thanks!

I didn't see the program, but apparently, as far as we're concerned, it was
something of a non-event. Merely a passing mention of the machine that started
it all.

Still, you can't expect a PlayStation ot a Jaguar to acknowledge their roots.
Can you? :-)

740. Re: Reading Apple disks

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-10 00:00:00 UTC
From: gbruner@eworld.com
Message-ID: <4fin1t$ikn@hp5.online.apple.com>
Source record: 85968

Probably not..due to the fact that the Apple II used it's own unique type of method to write data to a disk. When Steve Wozniak design the disk drive artchitecture (did I spell that right, oh well) for the Apple II he came up with his own method because at the time there didn't really exist (as far as I know) any floppy drive chip controllers. Because the Atari drives use Western Digital floppy controllers (FD1771 in the 810, 2793 in the 1050) the controller expects each track to be written in a particular signal coding method like Frequency Modulation (FM) and/or Modified Frequency Modulation (MFM). From what I remember he used a TTL method and hard sector format. Because of that the floppy controllers in the Atari drives are not designed to read that kind of format. I hope I was able to answer your question there acurrately.

The gun isn't *that* bad. It ain't great, but it works okay. Try Crossbow.
Damn shame more light gun games didn't get released.

One hint - play in a darkened room. I recall that when the room was lit,
the gun was much less reliable than when the shades were pulled down.

I just visited the SyQuest homepage and theres a product annoucement of a 1.3 GIG removeable drive coming out soon! The price for the drive will be under $500 with a 630 meg cart costing $65 and the whopper 1.3 gig cart running $135.

This looks to be the drive to get.

Oh yeah, its access time is around 11 sec, with a 4 mb/sec sustained transfer rate.

SK

: arrive.

at these prices, i imagine you'll be decorating your home with unwanted
CtCWs and Vectrexes and 3D-imagers! And just imagine, you'll pay for
your purchases AFTER you receive them, how innovative! I'm sorry, but I
dont think that anyone who's in this group does not know the *net* value
of these items (I was tempted to say *real* value, but that is just a
matter of opinion), so why don't you hit some thrifts/flea markets where
these prices might actually fly...

Ted B
(what really gets my goat is that if anyone does actually sell him any of this stuff at these prices, he'll just turn around and advertise it on the net for roughly 5 times what he paid. At least if he spent some time hittin the thrifts, he might have actually earned some of his profit.)

745. 6502 Decimal Mode

Perfectly correct, but maybe I can shed a bit more light on what is one of
the more obscure operating modes of the 6502. To use decimal mode with the
6502, you use the normal sequence for binary addition or subtraction with
the decimal flag set _but_ you have to use hex to load the bit patterns
because the 6502 interprets them as BCD once the decimal flag is up.

eg. to add 7+57:

```
SED
CLC
LDA #$07
ADC #$57
CLD
```

results in $64 in the accumulator which you read as the correct binary coded decimal result (the carry remains clear).

eg. to add 54+97

```
SED
CLC
LDA #$54
ADC #$97
CLD
```

results in $51 in the accumulator and a set carry indicating rollover past 99 (there is after all, no high byte to adjust in the 6502 accumulator).

Similarly:

```
SED
SEC
LDA #$97
SBC #$08
CLD
```

results in $89 in the accumulator and leaves the carry set as no borrow\ occurred, while:

```
SED
SEC
LDA #$10
SBC #$97
CLD
```

results in $13 in the accumulator and a clear carry indicating the borrow, so the BCD result is interpreted as -13.

Word and multi-byte operations are performed in the normal 6502 manner e.g. set up a subtotal of 790099

```
LDA #$79
STA RESULTHIGH
LDA #$00
STA RESULTMID
LDA #$99
STA RESULTLOW
```

add 102703 to it

```
SED
CLC
LDA #$03
ADC RESULTLO
STA RESULTLO
LDA #$27
ADC RESULTMID
STA RESULTMID
LDA RESULTHIGH
```

```
ADC #$10
STA RESULTHIGH
CLD
```

leaves $892802 in RESULTHI-->LO with a clear carry--the correct BCD result.

Floating point operations in the Atari ROM are carried out in BCD using 6 bytes where the first bit is the sign and the remaining 7 are the exponent (this byte is in binary) for powers of 100 in "excess 64 notation". The following byte is the integer portion of the mantissa followed by four bytes representing its decimal portion.

These examples are from page 8-45 of De Re Atari.

Number: 0.02 = 2*100^(-1)
Format: 3F 02 00 00 00 00
(exponent=$40-1)

Number: -0.02 = -2*100^(-1)
Format: BF 02 00 00 00 00
(exponent=$80+$40-1)

Number: 37.0 = 37*100^(+0)
Format: 40 37 00 00 00 00
(exponent=$40+0)

Number: -460312 = -46*100^(+2)
Format: C2 46 03 12 00 00
(exponent=$80+$40+2)

Three final notes:

1. The _only_ valid flag in decimal mode is the carry. If you try:

```
SED
SEC
LDA #$97
ADC #$03
CLD
```

you get the correct result of 0 in the accumulator with a set carry. But the z flag is _not_ set as you would expect and the sign and overflow flags are always meaningless.

2. _Only_ ADC and SBC work in decimal mode. If you try:

```
SED
LDA #$15
ASL A
LDX #$10
DEX
CLD
```

the values in A and X will incorrectly be $2A and $0F as the 6502 carries out decimal adjustment only following the add or subtract operations.

3. Because the Atari always clears the decimal flag on boot or reset and on exit from the normal floating point routines; and most DOS clear it on entry as a matter of course, a lot of software is written on the assumption that the computer is in binary mode. If a program does not clear it after use, really nasty things can happen later when you've forgetten it. This is not a worry with the ROM interrupt code which always issues a CLD before proceeding to service the interrupt, but the RTI of course, restores the entry status byte.

BCD sucks? I agree but the 6502 has a lot of other features that redeem it. If you have any more questions that I might attempt to answer, you can reach me via message or E-mail through Ted. If you have access to a USF BBS (CTH, New Nest, etc.), get me (jkp) directly on the 8-bit or 6502 programming bases.

: memories of that machine...BBS Express! ST has an option for 40 column
: support and I want to support 8-bit machines so I intend on using it.
: Here is my request: anyone who runs an Atari BBS and supports 8 bitters,
: would you please post some hints/tips etc,...on how to setup menus 'n
: stuff so they will work best with 8-bit machines. For example-does the
: 8-bit machines support anything like V-52, ANSI, IGS, or are they limited
: to Ascii? Thanks in advance for any input/info etc,...

Nope! The venerable Atari 8-bit lives beyond mere ascii. With the right
telecommunications program on the 8-bit you can do ascii, atascii, VT52,
VT100, VT102, ANSI and ANSI-BBS (like for Wildcat!), and more!

Chameleon, BobTerm, FlickerTerm 80, ICE-T version 2.5 will cover the above
and then some!

I am right now writing this message in VT-102 mode using the fantastic
(and still getting better!) Atari 8-bit telecomm package called ICET-T in
full 80-column mode at 14.4k baud!

Thank you, Itay!

So yes, to answer your question, the Atari 8-bit can do more than just
"emulate" ascii. Personally I like atascii!! :)

And some people think that the Atari 8-bit only plays Star Raiders. Of
course, we know better here in c.s.a.8.!

NOTE: I routinely use my Atari 8-bit as my main computer for accessing
the Internet and more via regular dialup.

If I really want the WWW graphics and pretty pictures, then I just go find
a Mac, Amiga, PC, Sun, SGI, etc. etc. But I actually do quite well without
it, just using the Lynx VT-100 based WWW browser via dialup.

After all, it is the information I am really after, not the window dressing!

And for all you die-hard Atari 8-bit BBS operators and sysops out there...
got anymore tips or advice? After all, he wants to support the Atari
8-bitters!

Tom

747. WORKING SYSTEMS FOR SALE

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-11 00:00:00 UTC
From: carlb66750@aol.com
Message-ID: <4fksgl$3vr@newsbf02.news.aol.com>
Source record: 85972

Being posted for a friend. Please reply only to email address below.

FOR SALE:

All equipment below in good working condition unless otherwise noted:

2 - 800 computers w/48k memory
1 - 400 computer w/16K memory, include unistalled 48k ram upgrade
2 - 850 interfaces
3 - 810 disk drives, one needs alignment, other 2 are fine. 2 drives have
Archiver modification
1 - 1702 Commodore color monitor

All of the above have working power supplies and interconnect cabling.

Also for sale:
Gobs of miscellaneous spare parts including 1 spare MPI drive mech,
chips
etc., diagnostic cartridges, diagnostic boxes including some manuals.

Would prefer to sell everything as a lot, but will piece it out for the
right price.
May consider trade for PC parts/accessories. Buyer pays for all shipping
via
carrier of choice.

no REASONABLE offer refused.

Please respond via email only to: soana@vms2.macc.wisc.edu

750. Problems with an 850 at 9600 baud

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-11 00:00:00 UTC
From: mgfrank@acsu.buffalo.edu
Message-ID: <4flb2s$3jq@azure.acsu.buffalo.edu>
Source record: 85975

I'm having problems getting a modem attached to my Atari 850 to communicate at 9600 baud. When I set my communications program to 2400 baud, everything works fine. However, when I set it to 9600 baud, the modem echoes my characters but doesn't act on them. That is, at 2400, an "at" produces an "OK". But at 9600, the at echoes but I don't get an OK.

It's a Zoom 9600 baud external modem. I've tried this with kermit, BobTerm, and Ice-T all with the same results. Modem configuration as follows:

B1 E1 L0 M0 N1 Q0 T V1 W0 X4 Y0 &C0 &D0 &G0 &J0 &K0 &Q5 &R0 &S0 &T4 &X0 &Y0
S00:000 S01:000 S02:043 S03:013 S04:010 S05:008 S06:002 S07:037 S08:002 S09:006
S10:014 S11:095 S12:050 S18:000 S25:005 S26:001 S36:007 S37:000 S38:020 S44:003
S46:138 S48:007 S49:008 S50:255

No amount of fiddling with it seems to fix it.

However, I can attach the 850 to a null modem and log into my other computer at 9600 without problems. Specifically, 850->850-to-rs232 cable->db25 rs232 cable->null modem->db25-to-Mac cable->SGI Indigo. In case it helps anyone figure out what's wrong with my modem, the tty settings for the Indigo's serial port are:

speed 9600 baud; line = 1;
intr = ^C; quit = ^\; erase = ^H; kill = ^U; eof = ^D; eol = ^@; swtch = ^Z
lnext = ^V; werase = ^W; rprnt = ^R; flush = ^O; stop = ^S; start = ^Q
-parenb -parodd cs8 -cstopb hupcl cread -clocal -loblk -tostop
-ignbrk brkint ignpar -parmrk -inpck istrip -inlcr -igncr icrnl -iuclc
ixon ixany -ixoff
isig icanon -xcase echo echoe echok -echonl -noflsh
opost -olcuc onlcr -ocrnl -onocr -onlret -ofill -ofdel tab3

Does anyone have any idea how I can hook the modem up to the 850 and get it to operate properly at 9600?

Thanks!

Yeah, I remember, and BallBlazer too. They were some wickedly fast games from LucasFilm.

I know everybody else has replied, but I just wanted to say that I LOVED the
music for Behind Jaggi. I recorded it once, letting it loop for 5 minutes or
so, just so I could put it on one of my mixes. I guess I kind of evolved
on atari-8-bit game music-themes (Ultima III had some great music as well, so
did Archon). I have since lost my recording, and the computer, and hence
the game, so now I play it on guitar.

I'm here looking for info on an emulator, so I can look at some of these old
games again.

Has the copyright gone out on the older games yet. How does that work?

Mark

Most of the reviews of the XG-1 and its games at the time of their
release complained of the relative inaccuracy of the Atari system as
compared to others. I've got a couple of XGESs and guns
and have used Bug Hunt and Barnyard Blaster. My only other comparison
would be the NES Duck Hunt. My experience agreed with the reviewers,
that the Atari system tended to be inaccurate, and tended to be
randomly off a bit to the left and up (as I recall). This was
attributed to the cpu cycle stealing for DLIs, which apparently would
be very difficult to compensate for on the fly.

As for sensitivity (that is, a hit being registered in the region of
the shot--giving allowances for DLIs), I think the XG-1 was pretty
much as good as the NES.

It was a trivial mod to connect the Sega Light Gun to the Atari--a
member of my user group did so, but I don't think any claims for
increased accuracy or sensitivity were made--they were just easier to
find.

Given the recent interest in the 5200, here's a re-post that may
find a few fans:

From: heller@akh104.rh.psu.edu (Andrew K. Heller)
Newsgroups: comp.sys.atari.8bit,rec.games.video.classic
Subject: 5200 Notes
Date: 28 Feb 1995 20:56:36 GMT

Against better judgement (and a hearty thank you to the person
who sent me this copy to begin with) I am posting the 5200 info.
(Not sure if it belongs in this group or one of the game
groups..but I'll post to both)

A.N.A.L.O.G. #15, January 1984

TRANSPORTING
ATARI COMPUTER PROGRAMS
TO THE
5200

by Claus Buchholz

When Atari designed the 5200 "Supersystem" as a successor to
the aging 2600 VCS, they made use of the state-of-the-art
hardware they put into their 400/800 home computers. As a
result, the systems are quite similar. The differences are
great enough, however, that transporting programs from one
system to the other requires some effort.

The 5200 is a single-board machine with four controller
jacks, a cartridge slot, an I/O expansion connector and a
power/RF cable. It shares the same VLSI chips with the
400/800, except for the 6520 PIA (joystick/parallel I/O
ports). The other chips (ANTIC, GTIA, POKEY and the 6502
CPU) are in the 5200, although some of their registers are
in different memory locations than those in the 400/800.
Also, some of the registers serve slightly different
purposes. Figure 1 is a block diagram of the 5200. Let's
look at each section of the hardware in turn.

When a specific register is mentioned in the article, the
name is taken from the Hardware Manual in the 400/800
Technical Reference Notes. With the exceptions listed in
this article, the Hardware Manual applies also to the 5200.

6502 CPU.

Although it is a standard 6502 from the programmer's view, Atari has reworked this chip to save four support chips. Those four chips mediate access of the system bus by the 6502B and ANTIC in the 400/800, but that function is built into the 6502C in the 5200. Atari also uses the 6502C in the new XL series of computers.

16K RAM.

The 5200 contains 16K bytes of RAM addressed from $0000 to $3FFF, just as in an unexpanded 400. The memory circuit is nearly identical to that in the 400, except it uses 4516s, a 5V-only version of the 4116 16K-bit dynamic RAM.

The 5200 monitor program reserves locations $0000 through $0018 and $0200 through $021B for shadows and RAM vectors. And, of course, page $01 is reserved for the 6502 stack. The rest of the RAM is available to the cartridge program.

ANTIC.

This is the same ANTIC chip used in the 400/800. Since ANTIC shares the address bus with the CPU and has no chip select input, its registers reside in the same place in the 5200's memory as in the 400/800's, page $D4.

The 5200 has no System Reset key, so bit 5 of NMIST is useless and the 5200's interrupt handler ignores it.

GTIA.

The GTIA and its registers perform the same functions in the 5200 and 400/800, except as noted below. The registers, however, reside at page $C0 in the 5200's memory, not at $D0 as in the 400/800.

The trigger inputs, TRIG0 through TRIG3, are wired to the controller ports, one to a port. The bottom button on either side of the leftmost controller zeroes the TRIG0 register when pressed, and likewise for the other ports.

The bits in CONSOL, the 400/800's console switch port (START, OPTION, SELECT and speaker), are used as outputs in the 5200, Bit 3, the 400/800's speaker control can still be toggled in the 5200 to produce sounds through the TV speaker. Bit 2 controls the pots in the joystick controllers. It must be set high to enable the pots.

Bits 1 and 0 select which controller port is to be active at one time. 00 selects port #1 (the leftmost), 01 selects #2, 10 selects #3, and 11 selects #4. The trigger buttons and pots are independent of this selection; it applies only to the keypads and top side buttons on the controllers.

POKEY.

POKEY's registers are all addressed at page $EB in the 5200 as opposed to $D2 in the 400/800. Its functions are unchanged, however, except for two.

The eight pot inputs used for paddles in the 400/800 are wired to the 5200's controller ports, two to a port. Each controller has an analog joystick, using one pot to sense horizontal position and a second pot for vertical position. The even pots (POT0-POT6) give the horizontal positions of range from 1 to 228; the maximum readings are to the right for the horizontal pot and at the bottom for the vertical pot. Figure 2 shows the pinout for the 5200 controllers.

Pin Function
1 Keypad -- right column
2 Keypad -- middle column
3 Keypad -- left column
4 Start, Pause, and Reset common
5 Keypad -- third row and Reset
6 Keypad -- second row and Pause
7 Keypad -- top row and Start
8 Keypad -- bottom row
9 Pot common
10 Horizontal pot (POT0, 2, 4, 6)
11 Vertical pot (POT1, 3, 5, 7)
12 5 volts DC
13 Bottom side buttons (TRIG0, 1, 2, 3)
14 Top side buttons
15 0 volts -- ground

The keyboard scanning lines in the 400/800 are used in the 5200 to read the keypad keys to the one controller that is selected by bits 1 and 0 in CONSOL. Only four lines are used, though, so only bits 1 through 4 of KBCODE are valid. Table 1 gives the keycode for each key on the controller. The top side buttons on the selected controller act like the 400/800 shift keys and also cause a BREAK-key interrupt, if that's enabled. Bit 0 of SKCTL, the debounce enable bit, need not be set in the 5200.

KBCODE
Key bits Keypad code
---
none 0000 $FF
0001 $0B
0 0010 $00
* 0011 $0A
Reset 0100 $0E
9 0101 $09
8 0110 $08
7 0111 $07
Pause 1000 $0D

6 1001 $06
5 1010 $05
4 1011 $04
Start 1100 $0C
3 1101 $03
2 1110 $02
1 1111 $01

POKEY's serial I/O lines are used in the 5200, but they are wired to the I/O expansion connector, an edge connector hidden behind a small door in the rear of the 5200. This connector allows for more hardware registers addressed at page $E0, and for peripherals using the serial port. See Figure 3 for the pinout of this connector. Its existence demonstrates Atari's original plans to expand the 5200 system.

Top Bottom

+5V DC 1 36 +5V DC

System Clock 01 18 19 A11

ROM.

The 5200 has a 2K ROM on board which holds the character set and monitor program. The character set, which is an exact copy of the 400/800's set, resides at pages $F8 through $FB, and the monitor sits at $FC through $FF.

The cartridge ROM can be 32K bytes long and resides in memory from $4000 to $BFFF. Figure 4 shows the pinout of the cartridge slot. The two interlock connectors are wired together on a cartridge board. The 5200 uses this as a switch for the cartridge's power connections and as a Reset signal. Therefore, a cartridge may be safely removed or inserted while the 5200 is powered on.

D0 1 36 Interlock
D1 2 35 A11
D2 3 34 A12
D3 4 33 A10
D4 5 32 A13
D5 6 31 A9
D6 7 30 Audio In (2 port)
D7 8 29 A8
Enable 80-8F 9 28 Not Connected
Enable 40-7F 10 27 A7
Not Connected 11 26 +5V DC
Ground 12 25 Ground
Ground 13 24 Ground (Video In on 2 port)
Ground (System Clock
02 on 2 port) 14 23 Ground
A6 15 22 A4
A5 16 21 A3
A2 17 20 A1
Interlock 18 19 A0

The 5200 monitor program.

The 1K monitor program in ROM has three functions: (1) to initialize the system before running the cartridge program, (2) to service interrupts as they occur, and (3) to maintain shadows of some important hardware registers. Recall that the 400/800 Operating System is 10K bytes long and performs the above functions. It also provides peripheral handlers, predefined graphics modes, a screen editor, and floating point math routines. Those utilities do not exist in the 5200.

Table 2 shows the RAM locations used by the monitor for shadows and RAM vectors.

Table 2. 5200 Monitor RAM Locations.

Page Zero Locations
$00 Shadow for IRQEN
$01 Real time clock (high byte)
$02 Real time clock (low byte)
$03 Critical code flag (if non-zero, VBI routine is abbreviated)
$04 Attract mode timer/flag
$05 Shadow for DLISTL
$06 Shadow for DLISTH
$07 Shadow for DMACTL
$08-$10 Shadows for COLPMO through COLBK
$11-$18 Shadows for POT0 through POT7

Page Two Vectors
$200 Immediate IRQ vector
$202 Immediate VBI vector

$204 Deferred VBI vector
$206 DLI vector
$208 Keyboard IRQ vector
$20A Keypad routine continuation vector
$20C BREAK key IRQ vector
$20E BRK instruction IRQ vector
$210 Serial Input Data Ready IRQ vector
$212 Serial Output Data Needed IRQ vector
$214 Serial Output Finished IRQ vector
$216 POKEY Timer 1 IRQ vector
$218 POKEY Timer 2 IRQ vector
$21A POKEY Timer 4 IRQ vector

Upon Reset, the 6502 vectors through $FFFC to the initialization routine. This routine performs the following sequence.

1. Disable maskable interrupts, clear the 6502 decimal flag, and set the stack pointed to $01FF.

2. If the cartridge address $BFFD contains $FF, then jump immediately through the vector at $BFFE (diagnostic cartridge).

3. Zero all hardware registers and page $00, set CHBASE to point to the character set at $F8, and initialize the first six RAM vectors starting at $0200.

4. Set up the Atari logo rainbow display. The cartridge title (20 characters) and copyright year (2 characters) in ANTIC mode 7 display code are taken from cartridge addresses $BFE8 through $BFFD.

5. Enable VBI (Vertical Blank Interrupt) and DLI (Display List Interrupt), and enable key scan.

6. Wait four seconds, then jump through the vector at $BFFE to the cartridge program.

When the 6502 receives a non-maskable interrupt (NMI), it vectors through $FFFA to the NMI handler. The following steps take place:

1. Check NMIST and strobe NMIRES to reset the interrupt status.

2. If a DLI is pending, jump through the DLI vector (initialized to point to the rainbow effect routine).

3. If a VBI is pending, jump through the immediate VBI vector (initialized to point to the VBI routine).

4. Else, return from the interrupt (no System Reset).

A cartridge program can change these vectors to point to its own DLI and VBI routines, if it must. The default VBI routine takes the following action.

1. Push A, X, and Y onto stack, increment the real time clock, and update the attract mode timer.

2. If the critical code flag byte is non-zero, then pop Y, X, and A from the stack and return from the interrupt.

3. Update DLISTL, DLISTH, and DMACTL from their shadows.

4. Maintain the attract mode flag and update the GTIA color registers from their shadows.

5. Update the pot shadows from POT0 through POT7, and strobe POTGO to start another pot scan.

6. Jump through the deferred VBI vector (initialized to point to the end-of-interrupt routine, which pops Y, X, and A, and returns from the interrupt).

If maskable interrupts (IRQs) are enabled and one is received, the 6502 vectors through $FFFE to an instruction which jumps through the immediate IRQ vector. That vector is initialized to point to the IRQ routine, which performs the following tasks.

1. Push A and check IRQST.

2. For each of the eight bits in IRQST, check for a pending interrupt. If found, then clear the status bit, update IRQEN from its shadow, and jump through the appropriate IRQ vector.

3. If no interrupt found, then push X and check for a BRK instruction interrupt. If found, then jump through the BRK instruction IRQ vector.

4. Else, pop X and A and return from the interrupt.

The only IRQ vector that is initialized is the keyboard IRQ vector, which points to the keypad read routine. That routine does the following:

1. Push X and Y.

2. Read KBCODE and mask bits 1 through 4.

3. Convert to the keypad code given in Table 1, leaving that code in A.

4. Jump through the keypad routine continuation vector (initialized to point to the end-of-interrupt routine).

Comparing the 5200's monitor vectors to the 400/800's OS vectors, we see that Atari paid no attention to

compatibility between the two. This further complicates the task of converting a program from one system to the other.

Transportability.

It would not be difficult, given the information in this article, to write a program in two versions, one for the 400/800 and another for the 5200. Nor would it be difficult, given the source code, to convert a finished program from the 5200 to the 400/800. The reverse is more difficult if the program takes advantage of special features in the 400/800 OS. Otherwise, the only task, aside from redefining some addresses, is to convert the keyboard/joystick input routines from one system to the other.

I acquired the information in this article by dissecting a 5200 and disassembling its ROM. The 400/800 schematics in the Hardware Manual were quite helpful. It is interesting to note the difference between the two machines and to guess Atari's motives for the design differences. But the similarities grossly outweigh the differences, so that a 5200 program can be developed and almost entirely debugged before testing on a 5200. With the addition of an EPROM burner, a 400/800 can be a powerful development system for 5200 programs. An adventuresome hacker can even bypass the EPROM by putting dual-port RAM on the cartridge board and downloading programs from the 400/800 development system into the 5200 for testing.

A.N.A.L.O.G. #16, February 1984

READER COMMENT

5200 Article Update. (ANALOG #15)

Newer releases of the 5200 incorporate some minor hardware changes. Controller ports 3 and 4 have been eliminated, making POT4 through POT7, TRIG2, TRIG3, and bit 1 of CONSOL useless. A few of the connector pins have been redefined. Pin 2 of the I/O expansion connector now carries POKEY's Audio Out signal. Three pins on the cartridge connector have changed to accomodate the new 2600 adapter. The system clock, 02, is output on pin 14, isolated through a diode. An alternate video input is taken from pin 24 and is also isolated through a diode. Pin 30 provides an alternate audio input.

There is space on the newer boards for circuitry for a PAL (European TV standard) version of the 5200. Also, on power-up, the monitor program checks for the PAL version by examining the GTIA register PAL after step 2 of the initialization routine. It also checks the cartridge program for PAL compatibility. The byte at $BFE7 should read $02 if

compatible, or $00 if not. This is the only important change to the monitor program. There are some additional hardware changes, but none affects the machine's operation from the programmer's view.

Atari 8-bit Hardware for Sale!

Time to clean out the closet and the accumulated 8-bit extras of some 13 years!

XEP-80 Interface Module with 80-column composite monochrome high-resolution video display controller and built-in parallel printer port. Comes with manual, video RCA cable, power adapter, and XEP80 boot disk (Works great with AtariWriter 80!) ------------- $35.00

XF551 5.25" Double-Sided Double Density 360K disk drive with the CSS XF Update chip. Includes instructions, I/O cable, power supply, and the XF IBM/ST Reader disk. ------------------------------ $60.00

410 Program Recorder with manual ------------------- $ 5.00

Atari 810 Disk Drive with "pop" style eject, power supply, I/O Cable, cover, and Archiver chip with disk and docs. ------------------ $25.00

Stock XF551 Disk Drive (360K) with power supply and I/O Cable ---- $45.00

1010 Program Recorder with power supply ---------- $10.00

800 48K Home Computer with BASIC cartridge with TV Switchbox, composite split-video and audio monitor cable with 2 stock Atari joysticks -- $15.00

1200XL Home Computer with 1 meg RAM and SuperVideo 2.1 upgrade -------------------------- $75.00

Stock 1200XL Home Computer ---------------------- $20.00

CSS 3.5 inch XF551 upgrade with Sony 3.5 720K drive mechanism, instructions, mounting plate and conversion kit. ----- $50.00

For you Black Box/Floppy Board owners! 1 Dual TEAC 1.44 3.5 inch floppy drive system set up as drives 3 and 4 in one case. ---- $50.00

1 XE Game System with detachable keyboard, 2 XE grey-colored joysticks and TV Switch box, RCA cables for composite video and audio, 1 amp power supply, XE owner's manual, and keyboard owner's manual, Atariwriter cartridge and Flight Simulator II cartridge with docs. (good condition) --- $45.00

600XL Home Computer with internal 64K RAM and Supervideo 2.1 upgrade, split-video composite monitor cable, 1.5A power supply, with 2 Slik-Stik joysticks (excellent condition) ------------ $50.00

Stock 800XL 64K RAM Home Computer with matching 1.5A power supply (white-top), RF Cable, 2 Quickshot joysticks. ---------- $35.00

SIO Cable with CSS Power Booster built-in and instructions. Overcomes weak data signals. This cable will amplify the signal to and from an 8-bit computer 20 to 100 times. ------------------------- $15.00

U.S. Doubler (ICD) kit for 1050 with docs and instructions. Will convert a stock 1050 to double-density (180K) and greatly speed up read/write operations using Ultraspeed routines. ----------- $25.00

ICD P:R Connection for printer and modem. with box, docs, and utility disk. Does not require a power supply. Comes with parallel printer port and 2 RS-232C serial ports. Also includes a conversion adapter to hook up to a standard IBM-PC 25-pin modem cable. ------------------- $30.00

ICD P:R Connection for printer and modem. Comes with utility disk, and comes in original box. Does not require a power supply. Plugs right into the SIO port. ------------------------- $20.00

Stock 128K Atari 130XE with split-video composite cable, manual, power supply, RF cable, and 2 standard Atari joysticks. (excellent condition) ------- $40.00

Stock 800XL Home Computer with 64K RAM, 1.5A power supply, RF cable, 1 Starfighter joystick and 1 pointmaster joystick. ------ $25.00

Stock 1050 127K Disk Drive with power supply, I/O cable, and manuals. ---------- $25.00

1050 disk drive with built-in Happy clone (Lazer 500) with I/O cable, power supply, instructions for Lazer mod, and utility disk. True double-density (180K), high-speed SIO read/write and more. --- $75.00

Game Mate 2 Remote Control joystick system. Comes with power supply, 2 remote control Atari-style joysticks, switch, and receiving unit. Can be used with all Atari 8-bits or 2600 systems ------------------- $15.00

Buyer pays shipping.

Atari Stuff for sale

I'm moving. I can't keep more than two complete Atari 8-bit systems, so I'm selling the rest. I've got books and magazines for sale as well. All hardware in working condition unless otherwise noted. All prices include shipping within North America.

Hardware

Atari 800. 48k. Power supply, manual included. Software included: Demon Attack, K-Razy Kritters, Crossfire, Attack at EP-CYG-4, BASIC Rev A (all Cartridges) $40

Atari 800xl. 64k. Power supply, manual included. $30

Indus GT Disk Drive. Includes power supply, manuals, SIO cable, transport case. Mechanism getting old. $30

Atari XEP-80. Includes TTL output modification, power supply, video switchbox for up to 4 devices, driver disk. $20

Atari CX-85 Numeric Keypad. Plugs into joystick port. Includes driver disk with source code. $15

Atari 850. Two broken printer/modem interfaces. Includes two SIO cables, one power supply, one 850->printer cable, user manual. $25

Atari 1025 printer. Includes manual, SIO cable. Uses standard typewriter ribbons. $20

Software

PaperClip: Word Processor. Uses RAM expansions for additional storage or RAM based spell check. Includes docs and dongle. $8

Silent Butler: Personal Finance program. Includes Docs. $5

Kyan Pascal: Full featured Pascal programming language. Includes docs. $5

Mac/65. Fastest 6502 assembler. Full docs. Disk version. $8

Games package: No documentation with the following original disks: Chop Suey; Pinball Construction Set; Spy vs Spy I and II; Ace of Aces; The Eidolon; Rescue on Fractalus. $10 for all six

Games disks with full documentation: Summer Games; Silicon Dreams; Dunzhin; Wargame Construction Set; Blue Max;

Shamus: Case II. $5 each.

Books

Your Atari Computer. Lon Poole et al. $8

Compute!'s First Book of Atari Graphics. $8

The Atari BASIC Source Book. Bill Wilkinson et al. $8

101 Programming Surprises & Tricks for your Atari Computer. David Heiserman. $8

Advanced Programming Techniques for Atari. Linda Schreiber. $8

Atari Technical Reference Notes. OS Users' Manual; OS Source Code; Hardware Manual. $15

Bob DuHamel's System Reference Guide. Printed copy. $8

Magazines

ANALOG, Antic, Atari Explorer, Atari User, Compute!, Atari Interface, Current Notes. Over 140 issues, some missing covers. For sale as set. $70

Terms

I ship on receipt of payment. Email me to find out if what you want is still available. Prices are negotiable, but keep in mind that shipping is included.

760. Cartridge format

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-12 00:00:00 UTC
From: David Paterson <dhpaterson@sympatico.ca>
Message-ID: <199602120638.BAA26940@smtp1.sympatico.ca>
Source record: 85985

Someone was asking about the storage format for cartridges. Here goes...

Taken from Mapping the Atari.

Technically, the right cartridge slot is checked first for a
resident cartridge and initialized then the left... [T]he last
six bytes of the cartridge program tell the OS where the program
begins... The six bytes are as follows:

Left (A) Right (B)
$BFFA $9FFA Cart Start addr (low, high bytes)
$BFFC $9FFC Reads 0 if a cart is present, non zero
when no cart is present. This info is
passed down to page 0 RAM: if the A cart
is present, then location 6 will read 1;
if the B cart is plugged in, then
location 7 will read 1; otherwise both
will read 0.
$BFFD $9FFD Option byte. if BIT 0 equals one, then
boot the disk (else do not boot). If
BIT 2 equals one, then init and start
the cart (else init but do not start).
If BIT 7 i\euals one, then the cart is a
diagnostic cart which will take control,
but not init the OS (else non-diagnostic
cart). Diagnostic carts were used by
Atari in the development of the system
and are not available to the public.
$BFFE $9FFE Cart init addr (low, high bytes) This
is the address to which to OS will jump
during all powerups and resets.

Hope this is of some help...

Source record: 85987

Hi there,

I got an old ATARI ST FM for free, but the power supply (the part located above the ram chips) is broken. Trying to swisch it on (motherboard may be connected or not), the fuse is showing a nice light effect :(((

Where can I get an old, but functionating one ?
As far as I know, Atari has given up Germany some times ago (I'm mainly using an Amiga, but I want this ST going :))

Please answer PM, as I can't read this newsgroup regularz.
Any help would be appreciated.

Thanks in advance, Michael

I'm afraid you just reinvented the wheel. SIO2PC is software that does
this and the specs for building the cable are included in the package -
and it's free (I think).

Chet

There *was* an end goal of sorts, wasn't there? You had to destroy the Guardians' base on rift 20 I believe? As for repetitive, I can't really say because I could never get past about rift 5. There it was one hit and *bloomph*. I got better shields along the way but I never found anything good enough to last very long. I'm sure there were some interesting things out there - what *were* some of those objects that you found? I found a rotofoil (from Ballblazer) and aboard that was an object which played a simple version of the Ballblazer them. I would really love to see someone document "how to get far in Koronis Rift".

I read somewhere on here that there is a term program called "Icet-t" and that it is really good. Where can I find a copy of it and how do I get it on a 5 1/4 disk at home from a Vax account? Right now I'm using(have been using for the past 2 years) a VT-100 emulator which works "ok" but the screen is bright white and the characters are a light blue.
perhaps I can find it on a BBS that I can call direct from home? preferably one on the east coast.
randy gray.
-been using the same 600xl(64k) and 800xl(256k) for the past 15 years
or so with no bucks for a "real" computer.

```
-----BEGIN PGP SIGNED MESSAGE-----

While perusing around ftp.funet.fi, I came across a large zip file of atari
8bit files. It's 809,422 bytes, and it can be found in:

/pub/misc/if-archive/games/atari-8bit/atari8gm.zip

It seems to have quite a few adventure types of games, in .atr format. I just
thought I'd pass this information along.

Well, the Alternate Reality web page is up and running.

All fans of the series, first released in (1985/87) will get themselves a momentum of nostalgia,

but for those who don't know what it is, it is a little unfortunate that I can't present the games for them...

Does anyone out there have them for any emulator?

(I'm quite desperate btw) :)

Yours Sincerely, Robert Hagenstri¿½m

774. Re: Problems with an 850 at 9600 baud

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-13 00:00:00 UTC
From: sgwallace@delphi.com
Message-ID: <Z9LrCIG.sgwallace@delphi.com>
Source record: 85907

I don't know if the config settings correspond between different modem manufacturers, but here are the settings for the Hayes Accura 144 I use:

B16 B1 E1 L1 M1 N0 P Q0 V1 W0 X4 Y0 &A0 &B0 &C1 &D1 &G0 &K3 &L0 &Q0 &R0 &S0 &T4 &U0 &X0 &Y0 S00:000 S01:000 S02:043 S03:013 S04:010 S05:008 S06:002 S07:050 S08:002 S09:006 S10:014 S11:095 S12:050 S18:000 S25:005 S26:001 S30:000 S36:001 S37:009 S38:020 S43:000 S46:000 S48:000 S49:064 S50:220 S63:009 S82:128 S86:000 S95:000 S97:030 S108:001 S109:062 S110:002 S136:003

This modem runs fine at 9600 baud with an 850. I have found S37 to be an important register. In this modem it establishes maximum DCE speed. Nine means 9600 baud. Hope this helps.

Steve

From: Jack Szwergold <jackgold@execpc.com>
Message-ID: <4fqr85$31l@daily-planet.execpc.com>
Source record: 86001

Hi,

I just downloaded Rainbow, a Mac Atari 800/800XL emulator, and
read that I need the 800/800XL ROMS to actually run the
emulator. Now, I don't mind hacking things, but the reality
is that the only working 800XL that I have is buried in a
basement 5 or 6 states away from where I'm living now. So is
there anyone out there who has a copy of the 800/800Xl
OP_SYSTEM files needed to run this emulator? I've owned a
400, an 800 and two 800XLs and I would really like to see that
darn "Atari Computer Memo Pad" screen on my Mac...
Could someone point me to an FTP or WWW site that would have
these ROM files? Or could someone PLEASE e-mail me a copy?
Thanks in advance...

Jack
jackgold@execpc.com

780. For Sale: Atari 800xl's + other stuff.

I wish to sell this stuff quick.
So make an offer if interested and E-mail me back please.

These items are known to be in working order.
Some of these items might have blemishes and might need to be cleaned.
All this stuff is in working order, Unless otherwise noted.

Computers:
(1) Atari 400 computer
(2) Atari 800xl computers

Drives:
(1) Atari 410 tape drive
(1) Atari 1010 tape drive
(1) parts 1010 drive
(1) Atari 1050 diskdrive

Software:
Star-raiders cartridge
Donkey-kong cartridge
Asteroids cartridge
Pac-man cartridge
Space-invaders cartridge
Basic cartridge (for use with the 400)
Zaxxon tape
The crypts of plumbous tape
Writing programs 1 & 2 tape
introduction to sound tape
introduction to graphics tape
Your atari computer (guide) book
Atari 400/800 basic ref. man. book
Syncalc disk & book

All computers & drives come with power supplys and serial cables
unless otherwise noted.

Shipping info:
I will ship this by snail-mail unless the buyer makes other arrangments
and will ship this from clinton wa. (whidbey island)
If the buyer sends payment by check, I will wait for the check to clear
before shipping the merchandise.

The package would be around 20 pounds heavy.
(or 20 pounds light ;-)

If you have any questions, I can be reached at: secross@whidbey.com

Secross@whidbey.com
clinton wa.

782. Super Pacman

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-13 00:00:00 UTC
From: Ken Siders <102404.2370@CompuServe.COM>
Message-ID: <4fq7p2ffm1@mhade.production.compuserve.com>
Source record: 86004

The problems with keys no opening doors with the file version of Super Pacman are due to Copy Protection in the cartridge (unless it was an accident). The problem doesn't occur if the cartridge area of RAM is able to be write protected.

783. Re: Super Pacman

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-13 00:00:00 UTC
From: "Jack H. Lee" <102337.2577@CompuServe.COM>
Message-ID: <4fqqiv$i7h$1@mhade.production.compuserve.com>
Source record: 86005

I thought the thing with keys not opening doors were due to
advanced levels, and that you had to turn into Super Pac-Man into
order to clear those portions of the screen?

Well, I guess it was going to happen sooner or later. I wonder how this is
going to affect the lynx? (Like Atari has been actively supporting it
anyway :-))

This could also mean a resurgence for Atari, to bring it back from
death!!! (I wonder how much they would sell the rights to the 8-bits?)

> Atari also said it extended a $25 million bridge loan to JTS Corp.
>and if the merger is not consummated, the loan will be convertible into

Wow, convertible is now a verb? Or does this mean that JTS gets a
convertible if they don't merge? :-)

I've been looking for a few days for a site that archives Atari800 games to run on the xf2 emulator. Does anyone know of any .xfd files with all those great Lucas (and other) games? In particular I'm looking for Rescue.. and M.U.L.E., but I'd also really like to locate any of the games I wrote back then like Bellum, Chop Suey, Henri or ElektraGlide.

I would be interested in the solution to Universal Hero. I never
quite managed to solve that one. If you could do so in ascii form, it
would be greatly appreciated. As for posting binary images on this group,
it kind of goes against the charter and people do have programs running
which look for large binaries posted to nonbinary usenet groups. Most of
them use a size of 100,000 bytes in its search critera, and issue cancels
for the offending messages.

788. Re: Iomega's ZIP drive on Atari?

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-14 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <xFBIiKD.lmcclure@delphi.com>
Source record: 85913

In a message dated 2-10-96, Stephen Knox said:
|
| "I just visited the SyQuest homepage and theres a
| product annoucement of a 1.3 GIG removeable drive
| coming out soon! The price for the drive will be
| under $500 with a 630 meg cart costing $65 and the
| whopper 1.3 gig cart running $135.
|
|
Strange. Iomega introduces the 100MB ZIP, and then Syquest comes along with the 135MB EZ-Drive. Iomega brings out the 1Gig Jaz drive, and then Syquest announces the 1.3Gig removable drive.

The difference this time will be that the Jaz is also based on Winchester technology (unlike the ZIP), so the Iomega Jaz and the Syquest 1.3gig drive will no doubt be more easily compared.

You can FTP it from "atari.archive.umich.edu" or one of its mirrors, if the latest version is even ON an FTP site. (V.2.5 was released Saturday, 2/10/96) From there, you can download it (hopefully) from the VAX account to an Atari disk.

I think the actual "official" way to get it nowadays is directly from the author, Itay Chamiel:

brucka@eruvin.jct.ac.il

: -been using the same 600xl(64k) and 800xl(256k) for the past 15 years

Ice-T will require that you use a 128K or better machine. It has neat features like backscroll, capture (with ANSI filtering), dialmenu, and more.

FlickerTerm80, another 80 column VT/ANSI terminal works fine with 64K, and I heard is better at keeping up with 19.2k than Ice-T (but I can't test it because my 14.4k modem S U C K S). It flickers (as the name implies) to generate a fast 80 column mode. It supports 'bright' and 'blink', but no 'underline'.

Ice-T supports 'underline', but no 'bright' or 'blink' (that I'm aware of!)

I feel really bad - I forgot Clay Halliwell's (new?) e-mail address. Thing is, he's been having trouble sending binary files via e-mail (otherwise I'd have the LATEST version of FT80, not one of the first releases. ;))

Rescue did this also. It is the only game that has actually scared me to
death!!!! The first time it happened, I died, of course, but I had also
dropped my joystick and was on the other side of the room!!!

Oh boy! A "Jaggi Lines/Fractalus scared me so much that..." thread. It's
about time!

Back in '84 I used to hang out at Computer Connection, one of the few computer
stores in Lorain, Ohio. The owners were great guys who really loved personal
computers and gadgets; they even built a Hero Jr. robot that wandered around
the store and sang to the customers.

These guys somehow always seemed to come up with pre-release software. One
day I went in and they booted up a couple of new ones: "Ballblaster" and
"Behind Jaggi Lines". After showing me the first few levels of each game,
they gave me a copy to try at home.

After playing Ballblaster awhile I tried Jaggi Lines. Well, during the little
in-store demo they forgot to mention that not all the pilots were "friendly".
And I had this bad habit of, while playing, leaning back in my tilting chair...

Of course, an alien jumped up, and it scared the living sh*t out of me. I fell
backwards out of the chair and flipped it over, and pulled the computer by its
joystick cord onto the floor with me.

The computer and TV stayed off for the rest of the day. And, even now,
when I pick the game up again I get a little twinge every time a pilot runs
up to the ship.

meemories... :-)

p.s. A year later I had the pleasure of meeting and interviewing Peter
Langston, a member of the LucasFilm games team that created Ballblazer
and Rescue on Fractalus. Maybe I should post it here??

Game on, and happy valentine's day!

Have your problem printed off. Give me a day or two to look up
the data in the stuff I have..You should be able to connect at
9600 or 19.2 depending upon what board your connecting to..This
might also help..what are you attempting to conect to?? The modem
there may only connect at 2400..reguardless of what you
configure?

On 11 Feb 1996, mgfrank@acsu.buffalo.edu (Marc G. Frank) said:

> I'm having problems getting a modem attached to my Atari 850 to
> communicate at 9600 baud. When I set my communications program to 2400
> baud, everything works fine. However, when I set it to 9600 baud, the
> modem echoes my characters but doesn't act on them. That is, at 2400,

Okay...

The problem with the 850 is that some of them (like mine) don't produce a
PERFECT 9600 baud signal. As a result modems can't train on it, and while
they will echo characters back, for some nitpicky reason they won't pick up
on the "AT" attention code.

The solution is to do all your dialing at 2400 baud, but set the S37
register to
force the modem to try to connect at 9600. Then switch your Atari to 9600
after connecting.

This really should be in the FAQ.

804. Not With A Bang...

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-14 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <199602150359.AA027346752@relay1.geis.com>
Source record: 85929

The following article is reproduced verbatim from page B6 of the Wall Street Journal, Wednesday February 14, 1996:

ATARI CORP. AGREES TO MERGE WITH JTS, CALIFORNIA-BASED MAKER OF DISK DRIVES
by G. Pasacal Zachary, Staff Reporter of The Wall Street Journal

Atari Corp., one of the great names in computer games, said it agreed to merge with a maker of disk-drives that is run by two legendary high-tech figures.
Under the terms of the deal, JTS Corp., a disk-drive maker based in San Jose, Calif. will emerge as the surviving company, but shareholders of Atari, who must still approve the deal, will hold about 60% of the shares in the new entity. JTS was founded in 1994 by Jugi Tandon, one of the highfliers in the personal-computer industry in the 1980s.
Atari, based in Sunnyvale, Calif., valued the deal at $80 million, although it was unable to provide a per-share value. In American Stock Exchange composite trading yesterday, Atari stock jumped 18.75 cents, or 10%, to close at $2.65 [sic] a share. (Typists' note: The price quoted in this article is in error; the correct closing price as quoted on Nightly Business Report 2/13/96 and reported in the Wall Street Journal 2/14/96 p.C-11 was 2-1/16 or $2.0625 per share. -BLP)
The chief executive officer of JTS is Tom Mitchell, cofounder and former president of Seagate Technology Inc., the world's biggest disk-drive supplier.
In an interview, Mr. Mitchell said that JTS will benefit from a $60 million in cash and cash-equivalents from Atari, which he said has a strong balance sheet but has faced serious difficulties competing against the much-larger computer game companies, Nintendo Co. and Sega Enterprises Ltd.
At least at first, JTS will operate Atari's computer-game business as a subsidiary, but when asked how committed he was to continuing in that busi-ness, Mr. Mitchell said, "We'll just see how it goes."
Lee Isgur, an analyst at Jeffries & Co., said the merger could mean the end of Atari's presence in videogames. "It could be the end," he said, adding that he expected Atari to keep at least "a low profile" in the com-puter-game business for the rest of this year.
But August Liguori, chief financial officer of Atari, said "The name of Atari will continue to be used in the computer-game environment. We still have a wonderful game library and many patents associated with games."
As part of the deal, Atari said it has loaned $25 million to JTS, which will be converted into shares of preferred stock in JTS if the deal isn't completed.

- END -

My opinion on the above, for what it's worth, is that first of all the deal will go through. Warner dumped its 15 million shares of Atari Corp. last year, leaving Jack And The Boys as the major shareholders. What Old Jack wants, Old Jack will get.

The statement by Mr. Liguori is pure hooey. Of course the Atari name will still be used in the videogame environment, since thousands of people own Atari products & aren't likely to trash them just because Atari has thrown in the towel. What Mr. Liguori did NOT say was whether the Atari name would continue to be a common sight on store shelves (which is where it counts).

I'm rather curious to know how Atari came by $60 million in cash. Proceeds from the sale of Taiwan factories & skimmings from the advertising budget, no doubt.

It's pretty clear what's happening here. JTS will suck all the cash from the remnants of Atari, then discard the empty carcass like a crumpled Christmas wrapper. You can pretty well bet that people with the likes of Tandon & Seagate in their past have their own agenda & don't give a hoot about some has-been third-rate videogame company floundering in a market hopelessly dominated by the Japanese. Merging with Atari is a quick easy way for these hotshots to get their hands in Old Jack's cookie jar. Kinda like taking candy from an old man. I only wonder what Jack And The Boys will get out of it. (The Boys, of course, are easily bought off with offers of new Ferraris. Or Porsches, whatever.)

Ah well, at least Atari outlasted Old Jack's other company, Commodore Business Machines.

this is the way Atari ends
this is the way Atari ends
not with a bang
but with a whimper.

With apologies to ts eliot.....

806. Atari, JTS Corp. Merger

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-14 00:00:00 UTC
From: phil.musgrave@muskrat.com
Message-ID: <960213140918133384@muskrat.com>
Source record: 85931

DOW JONES NEWS 02-13-96 10:09 AM
Sunnyvale, Calif. (Dow Jones) -- Atari Corp. (ATC) and JTS Corp.
agreed to merge.
August Liguori, chief financial officer of Atari, said the
transaction is a stock swap for about 40 million Atari common shares,
valued at about $80 million.
Liguori said Atari will continue to support its Jaguar video-game
system through 1996, despite heavy competition from Sony Corp.'s (SNE)
Playstation and Sega Enterprises Ltd.'s Saturn systems.
JTS Corp., of San Jose, Calif., is a privately held maker of
computer disk drives.
Atari said in a press release that under the agreement the merged
company will operate under the name of JTS Corp. and the current
officers of JTS Corp. will become the officers of the merged company.
The Atari entertainment business and the JTS disk drive business will
operate as separate divisions of the merged company.
The boards of Atari and JTS approved a definitive agreement for the
merger. Closing, set for the end of the second calendar quarter, is
subject to some shareholder and regulatory approvals and other
conditions.
After the merger, Atari shareholders will own about 60% of the
outstanding shares of the new company. The transaction is structured as
a tax-free reorganization and will be accounted for as a purchase.
Atari also said it extended a $25 million bridge loan to JTS Corp.
and if the merger is not consummated, the loan will be convertible into
JTS series A preferred shares at the option of Atari or JTS and subject
to some conditions.

If you are connecting to your printer through a P:R: Connection, you
can remove the cover and move a jumper plug on the circuit board
inside that controls line feeds. I had to do that in order to use a
Star Inkjet with my Atari.

A most interesting proposition. Wouldn't it be cool if someone released
a new line of updated 8-bit compatibles. I would release the 1600XL and
the 1650XLD. The 1600XL would include:

* 65816 CPU
* Parallel Bus
* Speech Synthesizer
* Integrated RS-232 interface
* Integrated Centronics Printer Port
* 256K RAM (exapandable)
* No built-in basic (available on cartidge)
* That cool 1200XL Cycling Atari Fuji symbol would appear if no disk drive
or cartridge is plugged when the computer is turned on (the 1200XL is
the only 8-bit that has this)

and it would be shipped in a case very similar to the 1400XL. The 1650XLD
would include all of these features plus a built-in 5.25 DSHD floppy and
a 120MB hard disk. It would be shipped in a 1450XLD-like case.

For existing customers I would release the 1090 expansion system unchanged.
These components would be (by definition) very inexpensive and would realize
the revolutionary vision that old Atari had before Warner gave them a chance
(and before the Tramiel sons screwed everything up).

Ah well... enough dreaming.

-Michael Ellis

There's a nice program called Pole Position/Race Designer, by Floytt Software.
It allows you to design tracks, save/load them, and then race them.
Unfortunately, this program wouldn't run on a 130XE or any machine with
expanded memory.
Well, I've found the reason: there's a STA $D300,X instruction inside a loop,
at address $5E72 (24178).
Replace it with a SKW (SKip Word) instruction or three NOP instructions, and
then it will work with no problem. Using a sector editor, look for the hex
string 9D 00 D3 an replace it with 0C 00 D3 or EA EA EA.
I'm uploading a program I wrote in TurboBASIC, which I called TRACKER. It's
for visual design of tracks for Pole Position/Race Designer. It's a very
small file and includes many tracks taken from F1. If you find the curves too
sharp compared to the real tracks, please e-mail me.

820. Help!!! On Rigging Monitor Cable for 130 XE!

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-15 00:00:00 UTC
From: StarMan <StarMan@Galaxy.com>
Message-ID: <3123D8E9.71FE@Galaxy.com>
Source record: 85945

Just got an old 130 XE, and I've got an old Goldstar Analog Monitor. Used to have a cable for it, but lost it.

Got 5 pin DIN plug from Radio Shack, and I'm attempting to rig it to phono plugs, but output is Black and White. I've used the FAQ as a reference for the pinouts, and managed to isolate what each wire is, but it's still mono. I've got three wires for video (chroma, luminance, video), plus the sound and the ground, but I'm not sure of the exact connections for each of the video wires. Anyone know which wire goes to which?

Thanks

821. Re: Behind Jaggi Lines

Newsgroup: comp.sys.atari.8bit

I was another unfortunately victim of the alien, which took off a few years off my life. In those days, I had the sound output through an amplifier, and this was one of those games that sounded really cool with the volume boosted through stereo speakers (especially the bit where you enter/leave the mothership). Needless to say, when the Jaggi appeared, it took me several minutes to regain my sanity. <g>

WIth an adapter they do, good luck finding that.
randy.

823. PC Xformer and R*O*C*K*S

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-15 00:00:00 UTC
From: Scott Le Grand <legrand>
Message-ID: <4g0dhu$md8@saba.info.ucla.edu>
Source record: 85948

Hi, I just got my hands on 3.3...

Silly question: the previous version came with the analog compendium
ANALOG54.XFD which contained Doug Engel's ROCKS game... I notice
this compendium isn't on my 3.3 disk... Anyway, this code used
a lot of display list interrupts to scroll 160x192 resolution font-based
asteroids across the screen. I noticed that it doesn't quite work,
and that there's something fluky with the collision detection as the satellites
that normally move below the asteroid seem to blow up on appearance...

Anyway, it seems like it pushes the thing pretty hard so if it ever
works with it, I'd say it's pretty exhaustive...

Now if only I could get sound and joystick support to work...

Scott

Who now has to track down pirate copies of all of his copy protected
software if he ever expects to run them again... Irony can be pretty
ironic...

825. Atari disk fix programs

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-16 00:00:00 UTC
From: germbear@aol.com
Message-ID: <4g201h$n14@newsbf02.news.aol.com>
Source record: 85806

Does anyone know if a program exists to fix a corrupted file or disk? I think something similar to Norton disk fix for PCs.

I have a few games that won't load properly and wanted to know if it hopeless.

Thanks,

Garry Terrell

Or does it? I remember from all the reports posted hear that Atari
shareholders would end up owning 60% of the merged company, although the JTS
officers will be running it. Confusing enough for you?

Basically, I guess we're going to see the absolute final end of the
ST line (if it still exists; I haven't been paying much attention to it
lately) and a pretty conservative video games strategy - so that's effectively
over, too: Atari missed an opportunity to make a splash with the Jaguar/JagCD
this last Christmas (costing $100 less, being more powerful, and even having
more software means squat without advertising). Look for this new "Atari
Interactive" to be all that really survives (I do like the PC version of
Tempest 2000 that they've got on the website, though).

::sigh::

Does anyone know what happens with the copyrights of the old programs? (1982-1984) I've seen many Commodore programs in the Net (even advertised in the Commodore FAQ), including any game you could imagine (typical of Commodore users, maybe). For the ATARI, it seems nobody is wanting to violate any law. But does anybody (is there a lawyer in this discussion group?) know IF/WHICH programs could be uploaded without any legal trouble?
(It's just curiosity... I don't want to do anything against the law...)

From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <ZdHKCCq.lmcclure@delphi.com>
Source record: 85813

After posting my reply about the Syquest 1.3gig removable, I actually came across an ad for it. For those who have the March '96 issue of Computer Shopper, check out DirectWare's ad on page 116. They advertise they SyJet 1.3GB Removable at $589.99 for the external SCSI unit with one cart, and the internal EIDE version for $494.99 with one cart, and additional carts at $99.99 each.

I doubt they actually have any in stock, however. In fact, I doubt the picture in the ad is actually of a SyJet, as it looks a lot like a pix of a Iomega ZIP drive that someone doctored up in Adobe Photoshop. Either that, or SyQuest decided to exactly copy the ZIP's "feet" configuration and transparent top window. <grin>

This is not necessarily totally wishful thinking. Unless JTS has thought of this, the 8-bit assets are merely excess baggage to them. I can't imagine they'd charge much for their licensing or sale, just don't tell them what you had in mind.

[Neat specs deleted]

This goes along with an idea I've had for a while. Everyone here has
heard the latest buzz of the internet box, well, what I propose is the
Atari XI Internet Box!!! I could see an Atari XI sold for under $250. The
only big things that I could see that need to be added to the XI would be:

-Beefed up graphics. Since it would still be using a TV, these don't need
to be any greater than 640X480.

-Use the 65816 with 256K of RAM

-Update the sound hardware to be able to play back digitized sound with
little help from the CPU.

-Add lines to the cartridge port so you can have huge ROM carts without
bank switching.

-Add an internal 3.5 HD

-Add an internal 14.4 modem

-Speech synthesizer

Software would come on cartidges. Basic would be built into the system,
and used for a macro language.

While we are dreaming, can anyone else think of things we should add?

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" shareware/freeware/PD developers should also be listed.
```

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, public domain software/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No product can be developed by more than one developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information is given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of the more prominent sources I use. Current Notes magazine, published by Robert Boardman and Howard E. Carson; Atari Classics magazine, published by Jim Hood and Bob Woolley; and The Atari 8-Bit Omnibus, published by David A. Paterson.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

845. Ballblazer on a PC

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-17 00:00:00 UTC
From: dalessio@manatee.cig.mot.com
Message-ID: <dalessio.824534666@manatee>
Source record: 85820

A service to Ballblazer fans...

I know many of you wish you could get Ballblazer for the PC.
Well, there's a game that's almost a direct ripoff, and it's
(in my opinion) better than Ballblazer. The name of the
game is "3D Cyberpuck". You can download the shareware version
from many of the common PC game sites.

I really recommend this game. IMHO, it's excellent. The only
problem with the full game is that it isn't "polished". It
only supports a soundblaster (it doesn't even work with the SB
emulator for the GUS). It has network support, but no docs on
how to use it.

I purchased the full game from a shareware distributor (the
company mentioned in the docs doesn't distribute it anymore).
If anyone needs the name of the distributor, send me a message.

Have fun!

Mario

846. Old Source Code

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-17 00:00:00 UTC
From: lashower@netcom.com
Message-ID: <lashowerDMwx3G.J2K@netcom.com>
Source record: 85821

Hi!

Like most everyone else on this planet, I'm putting together a Web Page :). I'm probably going to plop some of my old 8-bit Atari software that I wrote on my site. I know that most of it is buried in some archive somewhere, but I figure it would be nice to have it all in once spot.

Anyways, I was wondering if there would be any interest in the 6502 source code for the following programs:

1) The Antic Music Processor (Versions 1.2 and 2.1)
2) The Antic Sampling Processor
3) Labyrinths (plus the original BASIC maze vector graphics stuff)

If course, the standard disclaimer applies: no using the source code for personal profit. And of course, absolutely NO bitching about how sloppy my code was back then :)

You can, however, feel free to enhance and add features. It would be kind of nice to have AMP or ASP support a machine with 256K... or more. And of course, maybe even get AMP to work correctly on Darek's emulator - AMP's pretty IRQ heavy, which the emulator doesn't like..

If you're interested, please let me know, and I'll make room for the stuff on my web page.

Well a few years ago I bought a second-hand 800XL and I have my old floppy drives but I don't know how transfer bootable floppies to xf2 and secondly, for some insane reason at the end of my time developing on the Atari I started using DOS3 but I've lost my DOS3 system disks so I have a bunch of unreadable source code disks! I just sort of wanted to reread the source code to those games to see if the code was finger lickin' good or arse wiping bad - so to speak!

Now I'm involved in the on-going development of a realtime 3D graphics library called RenderWare which is used by people right thru from doing 3D games to the serious CAD companies.

Hello, nice to seeya still around..

Here I thought I had a chance to re-coup some of the $11.25 a
share I paid for Atari on the original opening..Well guess I can
alwayse use it for wall paper..seeing as how I held on to it
rather than bailing when it Split several years ago..

Atari stock is up from $1.375/share to 3.875! I was tempted to
buy after the first of the year but didn't. I guess that's the story of
my life! :)

Ooh - that new FTP site ("hipokrate.something.something.something...") has some nifty stuff!

Want to hear a REALLY nicely done digital mix? Get "digital.dc3" from the "atari8/demos/dc3" directory there.

Three tunes, an ok "christmas rap", an ok "madonna" mix, and an EXCELLENT techo-type song, "Humanoid". VERY cool listening. :) AND, this demo doesn't need a PAL machine!

Other great stuff there, too. The "Demologicus" (dlogicus.dc3) demo is alright, and doesn't need PAL either.

Source record: 85832

updated 02/16/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

Everything is sold as is. Unless specified, all items have been
tested and are in perfect working order.

Buyer has ten (10) days to send payment, and pays all shipping
costs, which will be sent via U.S. Postal Service. The shipping
cost depends on both the weight of the package and the distance
that it is traveling. Buyer has the choice of either first class
or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order,
drawn from a U.S. bank branch. Canadian buyers must send a Canadian
Postal Money Order, payable in U.S. funds. This is the only way I
have found to deal with my friends to the north (my bank is very
picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 6.00 Basic -- for the 400 and 800
$10.00 Delta Drawing (Spinnaker)
$10.00 Kids on Keys (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio

Shack for $7, plus tax. It allows for the connection of both 300 OHM
and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 130XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$59.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE, with one (1) Molex connector cable.

This disk drive doesn't include the power supply.

$34.00

*****

Yeah, I'd like to know too. It's unbelievable the number of C64, Apple
][and other 'original' software is on the net. Why are We behind? You
can't tell me that the developers are holding onto the copyrights (if
they are,, they're crazy!), and I know that Atari has a rep for being
prickish about their copyrights, but this is 1996, and in case they
haven't noticed THE ATARI 8-BIT COMPUTERS HAVEN'T BEEN ON THE SHELVES
FOR 10 YEARS!!

>-Michael Ellis

How about a new or revamped language. This is possible today with existing hardware. Perhaps a new BASIC or SuperBASIC or ACTION!++ or something. What I'm thinking is a fast semi-interpreted/compiled language that can utilise transparantly the extended memory in the 130XE or any 130XE compat. memory upgrade, or the AXLON, or similar. Using the extra memory for program code, library files for the language, etc. So you could program on a stock 130XE, a 150K program that runs fast!

The language should be slightly extensible. Provide builtin ASM routine support in-line of the code, or to call functions in a library code-block, located somewhere in extended ram blocks. Transparent memory allocating of 16/32 byte blocks in ext-mem. It should be usable as a games language or an application language. Something better than Action is now!

The extended memory upgrades have been under utilised, haven't they? It would load a memory manager to understand the memory paging needed to be done automatically. And partly intercept calls made by the language and then call the proper function lib somewhere else in ram. The 'staging' area for variables, and other things would be in base-memory. Also keeping track of ram use would be stored in base - unless larger memory computers needed seperate extended ramblocks to store the memory-used table..

This language could then be expanded to have Program Tasking. The ability to send 'services' into the background. Limited concurrent multitasking! Say 15 maximum tasks. The tasks themselves would be programs written in this SuperLanguage. (Nice name eh? ;-) Um, I don't remember, are Atari DOS calls re-entrant? <G>

I hope I've gotten a few people thinking!
Anyone interested? It IS possible.

860. run Basic program in ROM? On a Cart? HelpME!

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-17 00:00:00 UTC
From: dac@hevanet.com
Message-ID: <4g62a0$23s@vista.hevanet.com>
Source record: 85835

I would like to run a program in Basic from a Cartridge. I have a Eprom Burner and can figure out that part of it. But is this possible? I want to be able to turn the Atari 800XL on and have it run my program that will be on a Cart. Maybe I need to write the program in Basic and compile it, Although I don't have a basic compiler. The easiest way for me would be to write a Atari Basic program and somehow make it run when the machine is turned on. Anyone? Help

Thanks in Advance.

Five bucks... and that will probably be your best offer...

I don't think I've EVER seen anyone mention original costs in selling
computer equipment. Gotta be a sick joke.

But, if someone's brainless enough to buy it for the asking price, I've
got two more for ya... never mind I paid 95 CENTS for 'em from a thrift
shop...

What right, a genuine Atari 850 interface w/ power supply, gaurenteed to work 100% for only $30!! Last one, get it today! :)

Also have serial i/o cable for $5, and/or printer cable for $5 w/ the purchase of the interface.

Steve

Sorry about the duplications of your message. I just couldn't get that DOL text editor going.

You probably ordered your cable from America Techna-Vision. Their number is 510-352-3787. A couple other sources for Atari parts and equipment are B & C ComputerVisions at 408-986-9960, and Best Electronics at 408-243-6950.

Hope this helps.

>
>Thanks in Advance.

One way I can think of doing this is to burn your program into the rom,
and have a ML bootstrap coder that will copy the basic program into low
memory, switch off the cartridge rom and turn on the built in basic rom
and call a vector which will start execution. This is very dependent on
the revision of the basic and won't work in the original 400 and 800 series.

If you don't want/need dos access, you could also write a driver that
makes the cartridge look like a SIO device, and take over the E: device
to give the basic cartridge a load command. Of course, you still have to
switch off your cartridge rom when done, and turn on the basic rom.

>>a tax-free reorganization and will be accounted for as a purchase.

..Lots cut..

>Wow! So Atari, the name we've known and loved (at least in the 8bit
>days), is no more. Atari will now become JTS? Sheesh! You'd think
>they'd want to keep the more known name of Atari. I've never heard of
>JTS.

I don't think so. According to the post, Atari will remain a
seperate division of JTS.. Most likely products will still be Atari
products.. The Jag will prolly have "a division of JTS Corp" somewhere
on the box and thats about it.

Since JTS is a drive company would this mean cheaper Jag CD's?

Can somebody please tell me how to play this game? Found it on an old disk, and don't remember it. Looks like it should play like the old 2600 Adventure game. What I don't get is that if I'm carrying some object and one of the "bad guys" appears, my object disappears and is replaced by a sword...but the object doesn't just seem to get "dropped". Ya gotta search for it again.

Also...what are the available objects? One is a circle which I take is a shield. One is a white triangle...have no idea what it is. I've found a key and once found the grail (but couldn't figure out how to get back out of the area with the grail).

And finally...are there a limited amount of "bad guys" or do they endlessly randomly regenerate?

Thanks for any help.

Nor ethernet. (afaik)

>But what a great idea!

Agreed -- that would help make really cheap internet access a reality
for a lot of people.
Here at OSU, they're getting rid of login Unix access at the end of
the year, so everyone with no other login access has to use SLIP or
PPP. (Luckily I have two other OSU accounts, plus a job that requires
Unix access.) That means anyone with anything older than a 286 or Mac
SE is out of luck. They're only supporting Mac (sys 7), MS-Windows,
and MS-DOS.

What ever happened to that 800xl on the net in the netherlands?

>A text only HTML viewer could be hurled together pretty easily,

If nothing else, maybe Lynx could be stripped down and ported,
hopefully with the option of using Ice-t's 80-column display.

>but the graphix (JPEG/GIF), sounds (AU,MOD,WAV, etc) are going to be
>really tough to implement.

They're not absolutely necessary, especially the sounds. But there
are already GIF viewers and MOD players (though I haven't seen any
MODs on the web, just au, wav, and aiff). I think the sounds might be
the easiest.
Don't forget xbm graphics; they shouldn't be too tough.

SOMEBODY said somebody was working on it. Someone from Europe (surprise surprise :)). RUMOR? I dunno. I hope not! :)

: A text only HTML viewer could be hurled together pretty easily,
: but the graphix (JPEG/GIF), sounds (AU,MOD,WAV, etc) are going to be
: really tough to implement.

Yeah, HTML 2.0 is EASY. GIF is not tough (been done!). JPEG.. ummm.....
at least we wouldn't need to shrink our colormaps and stuff - just use one of the Colorview modes! :)

WAVs and AUs are EASY too. MOD has been done, too. :)

I think if you combine all that is an Atari (MODPlay, JViewXL, DaisyDot III, Diamond GOS, and one of the WAV converters) and we'd have a pretty killer offline Web browser. :) SLOW.. but killer. :)

I hate to sound negative, but IMHO, the label "ATARI" is the first nail
in the cofin of anything they'll put out. No one today in the general
public will think seriously of Atari other than a little Games company
or an Arcade Games Company. If they keep Atari as the name/label, I
hope they use a new logo for it. Something distinguishing, and to dispel
some of the 'mental rederic' surrounding the public opinion...

We in this group may think highly of Atari, but many see it as a Games company
and immediately think "2600, and C64-alike". I tend to think this had some
hand in the unsuccessful nature of most of their products since. Unpleasant,
but can you deny it?

bbingham@haven.ios.com (Bingham) wrote:

>YES! Awesome guru, please reveal the source! I remember the first time I
>saw "Passionatly" the demo.

Phillip Price wrote "Passionately". Actually, he wrote the music
driver and Gary Gilbertson wrote the music. His AMP (Advanced Music
Processor) is a completely different program than my AMP (Antic Music
Processor). Phil came up with the cool acronym and rhythm bar display
before I even picked up my first book on assembly language.

Phil was a TRUE Atari guru, and IMHO, he's one of the best Atari 8-bit
coders --- along with Douglas Crockford, Chris Crawford, Dan Bunten,
etc... The guy wrote his first game on an Atari 400 with an Atari 410
tape deck. I was spoiled with an 800/810 combo.

These days, it's a hell of a lot easier to write a video game. I'm
almost finished writing my first Sega Saturn title. The PSYQ RISC
assembler we're using assembles over 1,000,000 lines of code per
minute... a long way from the old days of MAC/65. Back then, "source
level debugging" meant priting out your source code on your trusty
Epson FX or RX 80 printer. Looking back, I find myself in awe at what
was acomplished by the programmers back then.

> I was in a computing contest at NJIT, junior year high school

> when I had a perfectly good 8-bit at home. He won go figure <g>

The judges had taste. ;)

>Anyway, when I saw Antic publish AMP I was in awe! Remember the contest
>for best AMP song. I've always wondered how the text was inserted in
>there <g,.> Source may help there!!.

When AMP 1.2 was published in Antic Magazine, one of the songs I gave
them was "Come Sail Away" by Styx, which had lyrics. An integrated
lyric system was later added in AMP 2.0. For the Styx song, I had
written a simple lyric editor in BASIC that appended the lyrics to the
song. I was rather inpressed when I saw the contest results and saw
that a couple of people had reverse-engineered the music data file.

Anyways, I'm still working on my WWW page, and I'll post the address
as soon as it is complete.

There USED to be Atari Games. Warner held on to old-Atari's coin-op division when they hawked Atari in 1984 -- this became Atari Games. For whatever reason, in 1995 they decided to rename the division Time-Warner Interactive; at least that was the plan. I'm pretty sure it happened too, because I haven't seen a new Atari Games title in the arcade since Primal Rage.

These are depressing times...

Great. But why is it that Choplifter and sooo many more are available for other platforms, why is it that virtually no originally shrinkwrapped software is available. It seems to me that developers (in business or not) and authors cannot be singling out the 8-bit Atari when stuff for other platforms is there.

Looks like someone already has. I noticed a new newsgroup
today. alt.binaries.warez.atari8bit
Sounds like what you're looking for, until someone starts an
ftp site. James King had such a site once. It was no where near the
size or completeness of the C64's Arnold site, but, it was a nice
start. Unfortunately, he got hastled too much and decided to take it
down.

Sincerely,
- Byron Followell

It's true... every time I tell somebody I have an Atari (or two), it
almost invariably turns out that they're thinking of the 2600, and
they've usually never heard of anything since, including the computers
we all love.

But replace the fuji?! How could you?

Much as I hate it too, I have to agree. I was JUST conversing, Saturday evening, with a woman who is a "guide" on AOL and was amazed to hear that I had been "telecomputing" since 1981, back when BBSes for the most part were run by pimply-faced 14-year-old computer geeks out of their bedrooms "on Atari computers." This woman's immediate reaction was an incredulous, "Atari? That's a GAME!" I had to explain to her that, "no, Atari also made a line of home computers back then." SIGH.

I also have a tape of a Dr. Demento radio program, circa 1982, in which one of the pieces is a standup-comedy routine from something called "The Unorthodox Record of Jewish Records and Lists." One of the bits in this routine is a "comparison of salaries;" it starts out with something like "rabbi of a major Orthodox synagogue; $12,900. Rabbi of a major Conserva-tive synagogue: $25,800. Rabbi of a major Reformed synagogue, $54,900... ... 'with car... and with Atari!'" That last remark brings down the house. Note that they didn't have to say "Atari VIDEO GAME," just "Atari." Obviously, at the time of this recording, "everybody knew" what an "Atari" was. If you think back, though, you'll remember that at that time owning your own computer was still a fairly expensive, nerdy, "far out" or "weird" thing to do, and that as a result, only those of us who DID own computers (whether Atari, Commodore, Apple, or some other weird off-brand) really knew that Atari MADE COMPUTERS! The general public didn't know a home computer from a hole in the ground, and knew Atari ONLY as a video game.

Hmm. I've been HEARING and READING about the aliens-that-jump-through-(or-onto)-your-windshield in Resdcue-on-Fractalus-aka-Behind-Jaggi-Lines, for YEARS now. I'e also been PLAYING R-O-F for years now. I've played levels that lasted so long that planet Fractalus' sun has set and risen again (those 9-minute days, eh). I've rescued dozens of pilots. But I've NEVER SEEN AN ALIEN JUMP ON MY WINDSHIELD! What do I have to do to see one? About the only thing I HAVEN'T done, is worked up to a level above about Level 8 or 9. Does it only happen at higher levels?

Waaaaaahhhhh! I wanna see an ALIEN! ....

895. The old days, and why Atari lost

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-20 00:00:00 UTC
From: harv@ix.netcom.com
Message-ID: <4gbcts$kkq@ixnews2.ix.netcom.com>
Source record: 85870

I started out in computers with the Olivetti 10 (I beleive it was
Olivetti). It was the first business computer. It had 64 bytes RAM,
(yes 64 bytes for program and storage, not 64K).
When the Atari 800 came out with 8K of ram for $1060 I bought it.
I was in the cassette duplicating business and started duplicating
Atari program cassetts and was coerced into joining another company for
that knowledge. Soon I was duplicating cassettes for all of the
current computers then went into disk duplicating.
When the IBM PC finally arrived it was so far obsolete to the Atari
800 I could not beleive that every jumped on the Big Blue wagon.
Commodore 64 was big then.
Why was the 64 big and Atari fading? Atari advertised great
graphics and game capabilities, Commodore asked, "When your child goes
to school, what *COMPUTER* do you want him to know?.
Atari slowed down their advertising but hit harder on games!!!!
When the clubs supported Atari, they could not get information and
the hardware was always slow in getting to the stores.
When the ST's came out, as a developer I waited 6 weeks to get a
Mega 2. If a developer waited that long, how long did a customer have
to wait?????

So why did they lose? Lack of advertising, very lousy delivery,
and terrible support.
Very frustrating because they had some of the best equiptment of
their time. The old 800's still beat some modern computers in their
theory.

Unfortunately written on a PClone.

The Swedish Atari User's Association
in cooperation with NoCrew presents

Nordic Atari Show 1996

14 - 15 - 16 of June

We don't give up! Once again we arrange NAS for all Atari lovers. Last year gave us the taste for it, thanks to all the visitors that gave us feedback. This year we're helped by the party elite second to none; NoCrew! The exhabition part is also much better. We look forward to three days full of activity and excitement. Here's a little taster. More information will be out as soon as we know more.

ACTIVITIES

hacker convent competitions for FALCON, STE, ST and Atari 8-bit

exhabition retailers and non-commercial organisations will be there to show you the latest...

demonstrations Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars seminars about programming, Internet, multitasking etc

others competitions for you who are novice at programming (lottery, MidiMaze, mini-harddisk-throwing, CocaCola-drinking etc)

When: 14-15-16 of June *Where:* Lundby Gymnasium in Gï¿½teborg, Sweden

Fees: Payment: SAK member: Non member:_

3-day entrance prepaid 100 SEK 125 SEK
3-day entrance at the door 125 SEK 150 SEK
1-day entrance at the door 50 SEK 75 SEK

We will, of course, be selling T-shirts or pins at the show.

INFORMATION FOR EXHIBITORS

If you want to join the exhibition on NAS you must pay the exhibitors fee of 1000 SEK on our postal giro 491 75 44 - 1 before the 31th of May. The area is 3x3 meters. Non-commercial organisations can join the exhibition for free.

A maximum 2 persons per company and 1 person per non-commercial organisation is included in the fee (which includes entrance to the hacker convent).

Please state your contact person on the postal giro paper.

Since the canteen - that we plan to give the exhibition in - is not the biggest in the world the bootsize will be limited. However the size of your boot will be at least 9sqm. If you wishes to have a bigger boot you should contact us to get specialprizes. Bigger boot will be given as far as the limited space allows it.

"The boot" will be a couple of dining tables plus a suitable amount of chairs that you can have at your disposal. A good thing is to bring white bedsheets or tablecloth of paper to cover the tables.
It's quit gran. A big sign with the companys logo on is recomended too.

We like to remind you that we can't help you in the same way as a real exhibitionservice at a normal exhibition even though we ofcourse will do our very best to support the exhibitors in every way.

The exhibition will have these opening-hours:

friday 14 juni 12.00 - 21.00
saturday 15 juni 09.00 - 21.00
sunday 16 juni 09.00 - 16.00

;Anyways, I was wondering if there would be any interest in the 6502
;source code for the following programs:
; 3) Labyrinths (plus the original BASIC maze vector graphics stuff)
I'd like to take a look at your maze generation routines. For some
reason, my maze generating program has a tendancy to miss filling in a
corner maybe once every 8 or so tries. I guess for that matter, I
wouldn't mind looking at your DL/DLIs as I recall it was a very nice
display. My only complaint would be as you approch a wall, the
bricks/stones get higher rather then larger. I've already got my own
renditions of walls, but as my artwork sucks, ergo the walls<g>.

898. run Basic program in ROM? On a Cart? HelpME!

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-20 00:00:00 UTC
From: ricortes@Garg.Campbell.CA.US
Message-ID: <6FZkJD2w165w@Garg.Campbell.CA.US>
Source record: 85873

```
;From: dac@hevanet.com (Dave)
;I would like to run a program in Basic from a Cartridge. I have a
;Eprom Burner and can figure out that part of it. But is this
;possible? I want to be able to turn the Atari 800XL on and have it
;run my program that will be on a Cart. Maybe I need to write the
;program in Basic and compile it, Although I don't have a basic
;compiler. The easiest way for me would be to write a Atari Basic
;program and somehow make it run when the machine is turned on.
;Anyone? Help
Possible, but involved. Just a guess or how I'd attempt it if I was
you. First get your hands on a 16K cart that takes 2-8k EPROMs. B&C
sells them & you may be able to find an 8k cart like Galaxian that is
already set up. Then make a copy of your BASIC cart except at $1FFA
stick a $00 $80 vs $00 $A0 that would normally be there. In the 2nd
EPROM you would need a short machine language program to toss a few
lines of basic code to the screen, put the screen in forced read mode,
then jump through $A000. The Basic code could/should continue to put
lines on the screen & enter them via the forced read mode.
Rick

The programs were of course stored in ROM right? :)

This is actually not as limiting as it seems, since the Atari 2600 has only
128 bytes of RAM, which it uses for program data *and* the stack. Its
capable of some pretty amazing stuff, with creative programming and
effecient use of those 128 bytes.

Gotta love small scale computing!

Steve (who is hogging 2-3 megs of RAM with this emacs editor!)

Atari's one-time chief scientist (I forgot his name, I think it was Steven Kay or Kaye), who jumped to Apple during the company's big turmoils, said Atari's biggest mistake was following the "lead" of other computer companies like Texas Instruments and such by lowering the computer prices so much so they ended up losing a lot of money. Kay even said the Atari 800 was the best computer out in the market at the time, but it got caught a price war. Apple survived Commodore's onslaught by not joining in the fray.

In retrospect, it makes that all the more interesting, considering what happened to Apple recently. They had lowered computer prices enough they were losing tons of money...like Atari did 13 years earlier...

>
>Waaaaaahhhhh! I wanna see an ALIEN! ....

Okay, let's see. They only start appearing about level 8 upward, if I
remember clearly. Also, whenever you pick up a pilot, do NOT shoot the
ship. The idea was that if you left the ship behind it might be
boarded by an alien who would activate the distress beacon again. This DOES
happen. So go around picking up pilots and not blowing up ships around level
13 or something; eventually you'll meet one of them. Another point to note
is that on the lower levels the aliens have green helmets; later on you
don't even get this as a warning.
The only way to get rid of the guy is to turn the engines back on, fast.
On the higher levels, you only get a second to do it.
The reason you have the airlock control is that you can wait for the pilot
to knock; if the alien approaches he jumps up at the windshield.
If you open the airlock before an alien has reached the ship he will
board and you will be in big trouble. The only way to get rid of him then
is to turn on the boosters and go for the mother ship; he dies in space.
Don't take too long because you will find it difficult to control the
ship with the alien aboard - and he'll get you in the end.

I bet you're amazed that you didn't realise this was in the game...

- Joel

904. Solution for Universal Hero

Source record: 85879

```
----------------------------
-./'-[ Solution for Universal Hero ]-./'-
----------------------------

Level I
-------------------------------------------------------------------
-go to C1 and take TAP
-use TAP in room H1, now open pipe is closed
-go down to H3 and take the THREE PIN PLUG
-in room H4 take a TWO CORE WIRE
-go now to G2 and grab the REMOTE SWITCH
-go on to room F2 and pick up the A.S.C. I.D. CARD
-in room D2 you take the PLUNGER
-go to room C2, use the REMOTE SWITCH and take the FLOPPY DISC
-drop REMOTE SWITCH
-now go to B4 and get the DYNAMITE STICK
-in C3 use the PLUNGER, TWO CORE WIRE and DYNAMITE
explode and remove the stones
-go on in room E3 and use the THREE PIN PLUG on the computer
-now use FLOPPY DISC too, code is demanded
-type in ASC, identify is correct
-force field on the right side opens, leave the room at the
right side and go on to room G3
-pick up SOME CRUDE OIL
-go with SOME CRUDE OIL to C4 and use it there
-take the produced SPACE SHIP FUEL
-now go to the Space Ship in H4
-check, that you have the A.S.C. I.D. CARD in the inventory,
drop the PLUNGER here
-use SPACE SHIP FUEL, you fly to level II

Level II
-------------------------------------------------------------------
-drop SPACE SHIP FUEL and A.S.C. I.D. CARD at B1
-in C1 you take the AIR TANK and use it immediately
-in E3 pick up a FLY SWATTER, in B2 you take the POTTING SHED KEY
-use FLY SWATTER in H2, grab now the DEAD COCKROACH and drop
FLY SWATTER
-in D1 use the DEAD COCKROACH -> you feed the plants
-go on to E1 and take WATERCAN
-use POTTING SHED KEY in E1 -> the door opens, drop POTTING
SHED KEY here
-in F1 pick up some WEED KILLER and use the WATERING CAN in G1,
then take the PRETTY PINK FLOWER
-in H1 you use WEED KILLER and so you kill the plants
```

-now take the RUBBER BOOTS in H1
-from G4 you take a MIRROR, in D2 grab a DROID RECALL DEVICE,
and in D3 pick up REPAIR DROID
-use the DROID RECALL DEVICE in E4, droid at LEADER RADIATION
BOX in level I / room E1 disappears
-from C4 you get the SPANNER and in A3 use the MIRROR
-now use the SPANNER in B3, then use the REPAIR DROID and drop both
-in F4 take a TEN PENCE PIECE, in E2 pick up the PASSPORT
-use the TEN PENCE PIECE at the telescope in A2
-go now to B1, take the A.S.C. ID CARD and SPACE SHIP FUEL,
look, that you have RUBBER BOOTS and PASSPORT in the inventory,
drop PRETTY PINK FLOWER here
-use at B1 the PASSPORT -> fly back to level I/ room H4

Level I

-go to F1 and take the ROUGH GLASS
-at E1 you grab the LEADER RADIATION BOX
-at A2 pick up a PIECE OF PLUTONIUM, no death,
because you have a LEADER RADIATION BOX and RUBBER BOOTS
-go back to H4 and use the SPACE SHIP FUEL -> fly back
to level II / room B1 over room A1

Level II

-drop A.S.C. ID CARD, SPACE SHIP FUEL and PASSPORT at B1
-take PRETTY PINK FLOWER
-use in D4 the ROUGH GLASS, you produce a LENS, take LENS
-pick up the STARTING HANDLE in H3 and the CURIOSITY from G3
-use the LENS in A3
-go to A4 and place yourself in the machine, use the STARTING HANDLE
-beam to level III / room A1

Level III

-drop STARTING HANDLE at A1
-take PIPE in C1 and ROPE in E1
-pick up the KNIFE in H3 and LARGE ROCK in H4
-at G4 use the KNIFE, you tie LARGE ROCK with ROPE
on the tree and use this as a catapult,
the LARGE ROCK flies to F4 and slays the plant
-go to F4 and through the entry to E4
-in E4 you take the BENT KEY
-go on to F7 and drop the PRETTY PINK FLOWER, CURIOSITY and KNIFE
-in F7 pick up the SLEDGE HAMMER, get a DIAMOND in G6 and
SOME AXLE GREASE in H5
-use a SLEDGE HAMMER at H7, you produce a STRAIGHT KEY
-take the STRAIGHT KEY in H7
-get a WATER PUMP in E8
-in G8 use the WATER PUMP (you must have the PIPE)
-the water is pumped to F8, drop WATER PUMP and PIPE

in G8, pick up BABBLING FISH
-go on to H8 and take the BRAKE LEVER
-go back to F8, leave the room as a 'fly' upwards
and don't touch the water
-go to E8, place the cursor in the inventory on the STRAIGHT KEY
-fall down before the rock and run fast to the left and reach
the exit
-use the STRAIGHT KEY if you are under the exit sign
(need fast reaction)
-now you are at the carriage in D8
-drop here SOME AXLE GREASE and use the BRAKE LEVER
-the carriage rolls on and breaks the walls, it goes with you to B8
-in B8 drop BRAKE LEVER, SLEDGE HAMMER and STRAIGHT KEY
-in C7 pick up the PENTACLE
-grab a RUBY in B3 and a CRYSTAL in A2
-in E2 you take a TALISMAN
-at A4 drop the BABBLING FISH
-go now to D4 and get the RING
-in D7 jump on the teleporter and use your TALISMAN
-you are beamed to E6, drop RUBBER BOOTS there and take the ORB
-use the RING at E6, beam to G7
-from G7 go to H8 and jump on the teleporter, you lost the ORB and
are beamed to level II / room E2

Level II

-go to room G4
-use RUBY
-YOU PREVENTED A DESASTER.

----END OF GAME----

Question:
Do you really need PRETTY PINK FLOWER, RUBY, CRYSTAL, PENTACLE,
CURIOSITY and BABBLING FISH ?

Annotation:
I changed some code of Universal Hero so that I had unlimited
time and air/energy. So I DID NOT try to solve this game with
limited time and air/energy. Maybe you must optimize the ways
you go.
Furthermore I changed some code of the title screen in a way
that after a key in the title screen of the game is pressed
a new room beside the room before is displayed.
(The rooms are numbered from 00 to 7F, this gives 128 rooms.)
So I was able to draw easy a map of the whole game.

: >Umm - there IS Atari Games. It's a completely different company. Nobody
: >ever seems to mention them anymore! :)

: There USED to be Atari Games. Warner held on to old-Atari's coin-op division
: when they hawked Atari in 1984 -- this became Atari Games. For whatever
: reason, in 1995 they decided to rename the division Time-Warner Interactive;
: at least that was the plan. I'm pretty sure it happened too, because I
: haven't seen a new Atari Games title in the arcade since Primal Rage.

Seen Area 51? It's a lightgun game with predone 3D stuff plus live action
video "sprites". It says "Atari Games" AND "Time Warner Interactive" right on
it. It's (c) 1995 or 1996.

They had a bit about Primal Rage and other games on .. damn .. some TV show.
They showed how they did the character animation with models - and one guy said
he was trained in theatre, but that it really helped to do the type of work he
ended up doing - game stuff. :)

But, I digress. My point is, it seems the name "Atari Games" is still around.
It's still a pretty cool company. :)

Yeah, same here - well, except nowadays anyone know KNOWS me knows exactly
what I'm talking about when I say "my Atari".

The cool thing nowadays though is, anyone who doesn't know, or who ends up
'talking 2600' with me starts going on about "MAN, those games were COOL!
Even with the cheesy graphics!" I of course say "YEAH! Why don't they make
games like that anymore!?"

: But replace the fuji?! How could you?

AGREED! Sure, change the name (people recognize THAT), but don't change the
FUJI!!!

The sad truth is that everything save the clones and the Mac have gone
down in history as footnote game machines, despite all the contributions
of companies like Atari and Commodore.

Which is of course ironic since the PC clone is the finest game machine
the world has ever seen. :)

: Okay, let's see. They only start appearing about level 8 upward, if I
: remember clearly. Also, whenever you pick up a pilot, do NOT shoot the
: ship. The idea was that if you left the ship behind it might be
: boarded by an alien who would activate the distress beacon again. This DOES
: happen. So go around picking up pilots and not blowing up ships around level

I don't think that's true - I always blew up the empty ships after pilot
pick-up just for grins and still got the aliens.

: If you open the airlock before an alien has reached the ship he will
: board and you will be in big trouble. The only way to get rid of him then
: is to turn on the boosters and go for the mother ship; he dies in space.
: Don't take too long because you will find it difficult to control the
: ship with the alien aboard - and he'll get you in the end.

: I bet you're amazed that you didn't realise this was in the game...

I decided to leave the airlock open and see what would happen if it were
an alien :) I'd do that once in awhile toward the end of a level just
for the challenge :)

Although I am not a copyright specialist, I am an attorney who took at least two courses in intellectual property. I found a great and understandable resource in this area at:

The Copyright Website
http://www.benedict.com

The same discussion arises in the rec.video.games.classics group. People want to know if it is legal to copy cartridges or make multi-cartridges since the original copyright holder is out of business. The answer: It is a violation of copyright. The moral dilemna: The copyright holder is unlikely to enforce its rights against your activity when you are dealing with 15 year-old games from companies which no longer exist. However, if such rights are enforced, you might be subject to criminal prosecution.

Copyrights used to be extinguished if the holder did not renew. The modern law (post 1978) allows copyrights to be enforced for the life of the author plus 50 years or 100 years from the date of creation if the work was done for hire.

People confuse copyright with trademarks, which can become public domain if not enforced. Copyrights must be deliberately released to the public domain, the copyright must be lost or nonrenewed (pre 1978), or the copyright must have expired in order not to run afoul of the laws.

Hi!

This is probably thw wrong newsgroup to ask this question but ...
does anybody know if Alternate Reality is also available for the Commodore
C64? If so, WHERE? I already have it for the ATARI 8Bit but I'd like to
compare the two versions.

Ulf

920. 800xl help needed

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-20 00:00:00 UTC
From: LV LEW <102442.3301@CompuServe.COM>
Message-ID: <4gdk3o$g7s$1@mhadg.production.compuserve.com>
Source record: 85895

I just picked up a used 800XL real cheap.
When I turn it on (minus any cart.) the top of the screen says:
"David Young OMNIVIEW256 (c)1985"
I am hoping that this means that this unit has been upgraded to 256K.
However when in this initial mode I am unable to do anything. I cannot
write a basic prog. or go to DOS etc. However the comp. does otherwise sem
to work just fine. I am using it to write this message with BobTerm.
Can anyone give me any help, suggestions etc..
Thanks..... Lew Brooks

921. ATARI controllers notes - updated

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-20 00:00:00 UTC
From: JTKIRK@urp.edu.pe
Message-ID: <m0tp2JV-000Oc0C@rcp.net.pe>

These are my updated notes on different types of ATARI controllers.
(Sorry, I think I sent twice the 'joystick misc.' instead of this)
I finally took the time to determine the circuital diagram of the STM1 mouse.
I'd have liked to add also the ATARI Light Pen, but unfortunately my nephews
have thrown it away, although I could rescue the ATARIGRAPHICS cartridge.
Even so, take a look at what I found out.

readings

The STM1 Mouse works as an inverted trackball (which is, in fact, what it is). The left button corresponds to the joystick trigger; the right button must be read in more or less the same way as the keyboard controllers, I guess (I had to return the mouse I borrowed before finishing my analysis).

Mouse rolling forwards (up) Mouse rolling backwards (down)

... ...

I tried to write a resident handler which should convert the mouse readings into joystick values and put them into the shadow register for joystick 2 (remember that on the ATARI XL/XE only joysticks 0 and 1 are in effect, and 2 & 3 just contain repeats of 0 and 1). Then, if you read STICK(2), you would have the translated values; STRIG(2) would give you the status of the right mouse button; and for the left button, you would still use STRIG(0). Unfortunately, the routine got hanged sooner or later, and I had to return the

borrowed mouse before I could finish debugging it. Maybe I can
borrow another and resume the task...

I've followed this group for a bit now, and I am surprised what has been done with Atari 8-bit computers. I feel awed in the presence of most of you, who still use your Ataris for just about everything. I really do wish I had the time to go searching through web pages and stuff to find what new stuff is being done with Ataris. Most of it will probably make my simple 4k machine language stuff look like crud (which it is :).

And I'll still smirk when I hear of someone complain that 4 meg isn't enough memory to do anything. If only the programmers of today had Ataris as their first computers, 4 meg would be enough for anything. :) Gimme Atari DOS 2.5 (with the modified title bar by me :P), Spartados (with MAC65 on the disk.. now that is a combination!), and the incredibly easy to use and program OS of the Ataris over just about anything one of these new computers can do today. Of course, Atari 800XLs can't run Doom, but that is just about all.

If I seem a bit excited, it is because I am. Ataris were the easiest to program computers I've seen. And they keep going and going. The Atari 800xl we have is about 13 or 14 years old now, and other than for routine keyboard maintenence, it does not need to be taken apart.

In closing this rambling post, I have only one thing to say: LONG LIVE ATARI 8-BITS!!

: domain, the copyright must be lost or nonrenewed (pre 1978), or the
: copyright must have expired in order not to run afoul of the laws.

Yes, I understand that much. And yes, it's clear that it's a violation
of copyright. But the few firms with a vested interest in 15-year old
software (mostly just Activision, trying to suck the remaining life out
of their Infocom properties as well as the 2600 and C64 packs) don't
seem to mind much. The most recent "legal brush" was when MECC asked the
Apple II FTP site administrator to remove Oregon Trail. Done, boom, no
problem.

Better to put them up for FTP than allow the work to be forgotten.

>a perfectly good 8-bit at home. He won go figure <g>)

Hey, yeah! "Passionately" has (since I first saw it) always been one of my all-time favorite songs, not to mention favorite Atari programs/demos! I even learned to play along with it on a little electronic piano I bought. Somewhere around here I have a REEL-TO-REEL TAPE of my efforts! :-)

I always thought it would be cool to put together an orchestra, or maybe even just a chamber-music group, and cut an album of famous video-game themes (e.g. Pac-Man, Frogger, others) in orchestral arrangements. The only problem is, much of the "classic" videogame music STARTED OUT as classical music. Go figure... ;-) I figure it happened the same way the William Tell Overture became the Lone Ranger theme: the pioneers in a new medium looked to the classical genre as a source of royalty-free music! It was cheaper than hiring composers to write all-new, original music! Of course, now that video-games are Big Business, they DO hire composers... But they DIDN'T ALWAYS, by cracky, you young whippersnappers...

Yes that's true. I didn't mean this was the only way to get aliens, all it
does is increase the probability.

>I decided to leave the airlock open and see what would happen if it were
>an alien :) I'd do that once in awhile toward the end of a level just
>for the challenge :)

Just reminded me of another small point. The airlock is jammed when
the alien is aboard. I panicked first time and tried to get the alien
out of the airlock again by stabbing the A key. No such luck.
I've got up to about level 17 but it gets pretty hairy then. One of
these days I've got to give the game another go.

One question: has anybody had one of the purple-helmeted "aces" turn out
to be an alien? I've never encountered one but someone out there might...

>
>Thanks in Advance.

You would need to modify your BASIC ROM in order for this to work. First of all, basic expects your program to exist in a certain area of RAM. It might be possible to modifiy it and hard-code a ROM address in this modified Basic, but you still have the issue of getting the program to run automatically. If you are dead-set on using BASIC, the better option is to make a basic-autoboot disk (these are common and easy to do).

If you are dead-set on have this be entriely ROM-based, then BY FAR the best solution is to write the program in assembly language and mooch off of BASIC for its complex services. You could certainly burn an EPROM that makes sense in this case.

I am guessing that the reason you want this in ROM is that you are working on some type of embedded application. If this is the case, you should NOT use basic in any real-time context -- you will be disappointed.

Hope this helps...

930. Atari 8 Bit Messe Wichtig

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-21 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <4gfbno$kfb@widukind.worms.fh-rpl.de>
Source record: 85708

First Part German second Part for English readers follows under Ger. Version

Hier nun der fehlende Teil meiner ersten E-MAIL zur Atari 8 Bit Messe.

Die Atari 8 Bit Messe am 28.03.96 in Schreiersgruen
Am 28.03.96 findet in Schreiersgruen eine neue Atari 8 Bit Messe statt, Schreiersgruen liegt zwischen Zwickau und Hof. Einen genauen Wege- bzw. Stadtplan erhaltet ihr von Markus Roemer oder Helmut Weidner, die sich fuer die Organisation und Ausrichtung der Messe verantwortlich zeigen. Die Privaten - und Kom. Haendler muessen keine Standgebuehr bezahlen, der Eintritt ist die symbolische 1 Mark.
Es wird auf der Messe neben Ke-Soft und AMC auch das Top Mag Team anwesend sein. Mehrere ABBUC Regionalgruppen (RAM , Franfurt, Lengenfeld , ...) und die Haendler freuen sich auf die Besucher. Auf der Messe wird wieder neue/alte Hardware vom AMC, KE und diversen Privaten vorgestellt und verkauft. Der AMC, KE wird wieder sein reichhaltiges Soft- ware Angebot aus Klassikern und neuen Spielen anbieten. Das Top Mag wird auch mit einem Stand vertreten sein, man wird dort die neuste Polensoft sehen/kaufen koennen, sowie Helmut Weidner's ARG Lengenfeld. Weitere Staende von ARG's, Highlaender Soft (ST/PC - Xformer/ Turbo Basic Vertrieb) und viele Private Haendler werden dort zu sehen sein.
Wie bei den letzten Messen kann man sich auch wieder ueber Atari im Internet informieren koennen und an einem Stand sowohl Jaguar(incl. Cd Rom) als auch den Lynx spielen koennen. Dort wird auch der Umgang mit dem ST/ Pc Xformer erklaert. Interesierte Besucher, Haendler die dort einen Stand be- treiben m&#65533;chten oder einen Stadtplan oder andere Info's brauchen, wenden sich Bitte an folgende Personen:
Helmut Weidner Hauptstr.45 08485 Lengenfeld Tel.: 037606 2688,
Markus R&#65533;mer Adresse folgt noch,
Andreas Magenheimer 06243 8476 Do ab 1900
Raimond Altmayer 06501 3678
Torsten Schall 06241 53070 e-mail schallt@worms.fh-rpl.de

Torsten Schall 21.02.96 German Version

Second Part (i hope easy to understand) English Version.

The Atari 8 Bit Trade show on Sa. 03.28.96 in Schreiersgruen/Germany
On the 03.28.96 will be a new Trade Show for Atari 8 Bit coputers in Schreiersgruen/germany held, Schreiersgruen is in Germany between the two cities Zwickau and Hof (near the border of Bavaria,Polen and the south east of Germany). A map of the city and the way to the show can you get from Markus Roemer and Helmut Weidner Who are making the show. The private and kom. trader pay no money for a place at the show, the entrace prise is the symbolic 1 Mark.

At the show will be many German trader like KE-Soft, AMC , Top Mag Team...
Many German Atari ABBUC regional groups like the RAM, Frankfurt, Lengenfeld...,
and the trader are happy to see you there. At the show will be new/old Hardware
from AMC (Sound Phaser, Multipad), KE-Soft (some)and from many private's to
look/talk at and natural to buy. The AMC, KE-Soft will also show their classic and
new Software stock. The Top Mag will there with a own stand, there can you buy
and look at the latest Polen Software, also at Helmut Weidners ABBUC regional group
Lengenfeld. A lot more ARG's, Highlaender Soft (ST/PC Xformer Info group, Demo Coder
, Distrebuter of Turbo Basic) and many more private trader will be there. Like the
last German Atari 8 BIT Shows, will there be the Jaguar, Jag CD and Lynx with the
latest games showed. Also a Dsikusssion about Atari in the Internet, how to use the
ST/PC Xformer with XL-ST-PC. You can get here many informations about connecting
ST's and PC's with a Atari 8 Bit computer. Interested people, Trader who want to
have their own stand at the show or if you need other info's about the show like the
city map and how to drive to the show, please call folowing person. Important call
first because you are then sure that there is enough space for traders, visitors
can't come enough!

Helmut Weidner Hauptstr. 45 08485 Lengenfeld/Germany 0049 37606 2688
or E-Mail me schallt@worms.fh-rpl.de

Torsten Schall 02.21.96 English Version

After i E-Mailed the first txt about the show i recognised that this is a world
wide group. Sorry next time i know it better.

I was aware that a speed increase is gained by disabling ANTIC but does the CPU really *halt* as you say? Wouldn't it be more the case that ANTIC hogs bus time? Synchronous computer architectures are constantly clocked, so how does the CPU halt?? Or do you mean halt as in not do anything? Sorry, I'm not really with it today (been out late last night... hic...)

I agree that most people, when they hear "Atari", think of the old
2600. But that isn't so bad. At least it has name recognition.
Also, it shows that many people are not aware of the evil deeds
of the Tramiels and might not be adverse to buying an Atari
product in the future.
A new venture definitely should use the Atari name. Besides,
the important thing is that heavy advertising is done for any
new Atari product. Still many people have no idea about the Jaguar.
BTW, I type this on my little respected Atari Falcon which proves,
IMHO, that Atari, to the end, produced great computers.
I still miss my 800XL and XEGS, though!!

That's been one of my wishes for a long time, too. I can just hear Korngoldesque arrangments of themes like "Pitfall II" or "Rescue on Fractalus" with full orchestral flourishes. If only the music was available in print, although it's not too particularly difficult to figure it out by ear. Many years ago, the principal themes from "Pac Man" was printed in one of those "how to beat Pac Man" type books. It was interesting....wish I had bought it. I got the one by Ken Uston instead. <g>

Well, if someone wants to hear this, this is how my first experience with Rescue on Fractalus! was:

A devilish, mischievous friend brought his copy of RoF! to my home to show it to me. He started playing on level 14 or so, and told me "what you do is land and rescue the pilots which appear on the radar, like this" Then, he told me "sit down and try... look, there's another pilot... yes, this one is green... yes, try yourself!" And I sat down and as the Jaggi jumped on the windshield, my heart stopped beating and I grabbed the arms of the chair... watching that ugly fellow destroy the windshield and kill me. After that, I called my nephew to demonstrate the game to him... I did the same my friend had done, but when the Jaggi appeared, it was not only my nephew who jumped back... and I still do every time I see one appear (even after knowing it's green). That time, my nephew ended up laughing at me...

939. Informatica Creativa Mag. Disk

Under permission of the publisher, I'm uploading to the UMich Archives the Disk #1 of the Peruvian magazine Informatica Creativa. (You should find it under INFCRE1A.DCM and INFCRE1B.DCM) I used to write for that mag. some years ago. There are still back issues available. I also have lots of programs I was writing for the magazine...
If not for the programs included, you should download the Disk for the nice pics it has from the Nazca Lines and Machu Picchu, among others...
If you're interested in back issues after looking at the disk contents, contact the publisher via regular mail (it seems the phone company just changed his number, so I'm going to have to make a personal visit to him)

If the programs aren't too big(5-10K), I would say go ahead and post them. If they're bigger, you might want to see about sending them to atari.archive.umich.edu. And, if they contain any graphics characters you might have to uuencode them.

It might exist on some sites, if the admins are still naive enough to
automatically accept every newgroup control message. For obvious
reasons, most sites will reject any "warez" newsgroup.

It's a question of terminology. The 6502 doesn't actually halt in the
sense of "do nothing until interrupt or reset". The Antic just hogs the bus.

945. Were these ever released for the a-8bit?

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-21 00:00:00 UTC
From: tomhunt@bright.net
Message-ID: <4ggans$krp@cletus.bright.net>
Source record: 85723

I've been monitoring the i.f. (interactive fiction) group, and it appears that they are creating some quality text adventure games. These games are very much like the ones produced a few years back, by Infocom. They use a compiler called Inform, which operates like the mythical Zilch compiler that Infocom used. The compiled game can then be ran on a multitude of platforms. This can be done because Infocom created game interpreters for each platform that they supported.

Apparently, there are different versions of the Infocom interpreter, with each version supporting more "features". Infocom produced version 3 interpreters for the following games, for the Atari 8bit:

Ballyhoo, Cutthroats, Deadline, Enchanter, Hitchhiker's, Hollywood Hijinx, Infidel, LGOP, Lurking Horror, Moonmist, Planetfall, Sorcerer, Spellbreaker, Starcross, Stationfall, Suspect, Suspended, Witness, Zork I, Zork II, and Zork III. I'm not sure if Fooblisky used an interpreter, or if it used a special custom type of program.

In order for the Atari 8bit to play the new games being produced by the Inform game compiler, it has to have an Infocom version 5 interpreter. Can anyone please tell me if Infocom ever released any of the following games for the Atari 8bit?

Beyond Zork, Border Zone, Journey, Sherlock, or Trinity (really version 4).

The games mentioned above used version 5 interpreters. Some of the previously mentioned version 3 games were later re-vamped into version 5 games. You can usually tell a version 5 game because it uses more color, and is "fancier" than a version 3 game.

If <anyone> knows of, or has one of the above mentioned Infocom version 5 games, please contact me. I feel confidant that if I can find one, I can get it to run the new and wonderful games being produced by the i.f. group. Thank you!

I'd be interested in seeing what DSP stuff could be done on the Atari 8-bit.

At present I'm curious about the possibilities of applying FFT analysis to image files of "unknown" format, to attempt to detect periodicities that might indicate line length, thereby allowing one to reverse-engineer the image format...

IMHO this is incorrect. The mouse returns greycodes so the sequence
for left/right or up/down should read:

0 1
1 1
1 0
0 0
[loop]

Do you mind if I add this document to the Atari 8-Bit Homepage?
(BTW have you all seen the new lay-out? I haven't got any reactions.
It seems like nobody noticed the change... also, how many people are
having problems viewing the pages (access denied because of a DNS lookup
failure, our server requires the forward and backward DNS lookup to match)?

And... how many view my pages with lynx, in other words, should I continue
to make the pages viewable with lynx? Hmm... I'm getting off-topic...
I'd better quit :-)

952. XFD images

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-21 00:00:00 UTC
From: JTKIRK@urp.edu.pe
Message-ID: <m0tpN8K-000OepC@rcp.net.pe>
Source record: 85730

Well, many people has been asking both about XFD images and copyrights. It would seem to me that the only way to turn a bootable disk into an XFD image would necessarily imply disabling any copy-protection and some disassembly of the code, in some cases. If there's someone who knows where to find the copyright holders of most of these games:
Rescue on Fractalus!/Behind Jaggi Lines
Koronis Rift
Ballblazer/Ballblaster
The Eidolon
M.U.L.E.
Seven Cities of Gold
Alternate Reality (?)
Castle Wolfenstein
Archon
Archon II
... and many, many others (I can't read minds, so I have no idea what other people would be interested in)
PLEASE post on this newsgroup or directly ask those guys if they could release the copyrights or turn the games into XFD images by themselves.

Goodbye!

I doubt that -- as soon as the Ace comes towards your ship, a message
appears: "It's the Ace!"

One thing I also noticed between "BJL" and "ROF" was that in the latter
version, you're able to swing your ship around if the pilot isn't
initially visible in the cockpit screeen. That is, fly away from the
spot, turn around, and he'd be in view from a new angle. It sort of
helped out seeing what was coming, but not always.

I have been reading through many of the threads talking about Rescue, MULE, and others and wonder why computer companies don't make games this good anymore? I have been playing computer games fifteen years and yet when someone asks me for my favorite games, I always reply "Probably a split between MULE and 7CITIES (although Transport Tycoon and NASCAR come close on my list)" Have programmers given up on good gameplay for good graphics or am I just getting too old to recognize what is fun (I am only 21 now so the latter would scare me.) Why doesn't NBA jam have the cool little robot come up and clean up the glass after you break it? Why doesn't MASTER of ORION have the least bit of difficulty? Why don't aliens smash your winshield in Descent? Maybe I am just dreaming or taking acid unknowingly or something, but I just think that we as a game playing public deserve better games on all platforms, in fact I would even say that we need better programs on all platforms in all subjects! Long live the 8 bit and the members of CSA8 who keep the days of great games and programs alive and let us remember the days when Pong was actually fun.

Taking all flames and praise alike,

Cliff Friedel

Omniview is a custom operating system for the 800XL. I don't know much about it, but I think it's programmed so that the Option key works opposite from normal: hold Option down while turning the machine on to enable Basic. Try holding down the Select key and see if anything interesting happens.
Can you get into Dos by quitting from Bobterm? If not, maybe you have a bad copy of Dos, or maybe someone deleted DUP.SYS to save space on the disk (do you have more than one disk?)

: I just picked up a used 800XL real cheap.
: When I turn it on (minus any cart.) the top of the screen says:
: "David Young OMNIVIEW256 (c)1985"

Omniview is an 800 compatible OS w/ a built in gr.8 80 column display driver. I used to have one, and I cant recall exactly how you booted up in 80 column mode, sorry! Combination of select key + ??? possibly?

The os also has built in ramdisk capabilitys, which is prob what the 256 refers to. Might be 256k, who knows. Try creating a ramdisk under MyDos, or just pop open the cover and look :)

When I was trying to figure out how to play this game, my friend and I decided
it was impossible to 'win' it. So we would go find the 'holy grenede' and
drop it in the room with the 'ship' That room would be blown to bits which
sometimes would leave enough cracks to 'squeeze' into the ship. From there it
was a piece of cake.

>And finally...are there a limited amount of "bad guys" or do they
>endlessly randomly regenerate?

>Atari 8bit?

Tom -

I've written a text adventure in Inform. So, I'll try to answer some
of your questions.

As far as I know, Infocom never made anything other than a Version 3
Z machine for the Atari 8 bits. Graham Nelson author of Inform, wrote
an excellent article on the Specifications of the Infocom Z Machine,
which you can download from FTP.GMD.DE (sowhere in the "IfArchive"
directory, I belive).

It is true that most of the games made with Inform are assembled for
a Version 5 Z Machine (or more recently, a Version 8). However, it is
likely that most of the games do not take full advantage of Z5.

My game was compiled for Z5 to take advantage of the increased number
of synomyms that Z5 has to offer over Z3. It could easily have been
compiled into Z3 just by chaging an option on the compiler.

So, if you want to get some of these games on the old 8-bit, your best
bet is to e-mail the author and ask if it is possible for him to
compile his game for Z3. As far as converting a PC .Z3 or .Z5 file
over to an Atari 8-bit goes, I'm not sure but.... for the two sided
games, the first side probably was the Z Machine and the second side
was probably the .Z3 file.

Good Luck

ANTIC steals cycles from the 6502 to do the DMA; thus the CPU does not
halt so-to-speak, but in terms of your program, it does halt. It's
a matter of persepective and what you read into "halt".

967. The Undying Copyrights Issue... (LONG)

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-22 00:00:00 UTC
From: omf@rightfax.com
Message-ID: <4gh022$npu@client1.news.psi.net>
Source record: 85742

The issue of copyrights and what to do about abandoned
software comes up in this forum every few months. Personally,
I'm kind of tired of hearing the same questions followed
by the same answers. Let's be sure we all agree on a few
points (I'm quite sure you'll jump in if you don't agree...):

#1: Atari 8bit users (or, more specifically, those on the
internet) seem to be very concerned with the issue of
copyright infringement.

#2: Other 'orphan' computer owners don't seem to lose a lot of
sleep over this. Evidence: Software which is no longer
commercially available is now available via FTP.

#3: The fact that said software is freely available generally
means that laws are being broken, or at least ignored,
by other users.

#4: Despite #3 going on for quite some time, none of the
copyright owners have risen from the dead to hound anyone.

#5: Outside of the occassional shareware item, the chances
of new commercial software becoming available for these
'orphan' machines are about as high as my getting knighted
by Queen Elizabeth.

#6: There are a few vendors left in our market which we would
like to support and see survive as long as possible. (For
example B&C, Best, American, etc.)

#7: There are many software titles which are very difficult
to get, and more and more seem to fall into this category
with the passage of time.

I think those are most of the important points that pertain
to the whole Copyrights Thing. Please feel free to make additions
or modifications.

I've been wondering why it is that Atari owners are so concerned
about copyrights. Are we simply a more law-abiding group than
those nasty C64 owners? Possible, but I seriously doubt it. I've
got a couple of theories going, tell me what you think...

a. _The_More_Mature_Audience_Theory_
There were no where near as many Atari 8bits sold as their
Commodore and Apple brethren. This resulted in fewer
software titles having been released for our machines. In turn,

we ended-up with a smaller, more elite user base that attracted
a somewhat more mature audience ("What?! 'Attack of The Mutant
Ninja Bunnies'(tm) is out for the Commodore and not for the
Atari??! Mom, I want a 64!!!") The remaining self-selecting
audience (the most elite of which now make-up c.s.a.8) tends to
be more interested in neat-o hardware and software hacks than in
pirating games.

b. _The_Guilty_User_Base_Theory_
Back in the mid-80's, when our dear machines were dying
their slow death (at least as far as commercial viability goes),
we were constantly told by software companies such as Electronic
Arts and Broderbund (sp?) that the reason they wouldn't release
new Atari titles was that there was too much pirating in that
market. Instead of just telling us that our user base just
wasn't lucrative to them compared with the alternatives, they
made us feel guilty for the actions of a few. As if Atari users
were the only ones who pirated games! I *know* that there was
a great deal more pirating going on in the Apple, Commodore, and
IBM PC ranks. The thing is, there were so many more of those
machines that it still made much more business sense to sell
into those markets. Now we're in the mid-90's and we feel
we need to protect ancient software to atone for our past sins.

Assuming you've been reading all this, you're probably wondering why I'm
going to the trouble of typing all this. Well, partly I wanted to get my
thoughts down on the subject, partly I wanted you all to comment on what
I thought of this, but mostly I wanted to make a proposition:

I propose that we start making some of this old software freely available
to everyone.

There, I said it.

Hopefully I won't be stoned to death for it...

That said, I think we should set a few general guidelines about what
sorts of things we make available. We should give preference to
things which cannot be obtained through other vendors. For example,
I'm sure most of us would like to see those 5200 ports that have been
mentioned recently and I'm sure no one can legally sell them (other than
Atari, of course...)

I believe that making more software available will help our user base.
Having more interesting old games readily available will mean that the
demand for hardware (or very good emulators) to run it on may go up.
There may be more people inspired to write re-makes. We can all have more
fun. We can all hold hands. Hunger and disease will be things of the past.

A short while ago someone created a newsgroup for posting Atari
8bit binaries (alt.binaries.warez.atari8bit - and, no, I didn't do it).
We should start using it. I will venture forth and make the first
offering if I don't here very good reasons not to (other than

"I'm going to be slain by lawyers" - a good reason, mind you, but after looking at how much *current* and *expensive* software gets openly posted on the internet on a daily basis, I'm not particularly worried about a few monetarily worthless and ancient binaries, and I will certainly stop if any lawyer-types do happen to call...)

I was going to make some suggestions on exactly how we should post binaries, but I guess that can wait a bit.

Yours,
Oscar

From: tomhunt@bright.net
Message-ID: <4ghk2q$pd8@cletus.bright.net>
Source record: 85744

I've been monitoring the i.f. (interactive fiction) group, and it appears that they are creating some quality text adventure games. These games are very much like the ones produced a few years back, by Infocom. They use a compiler called Inform, which operates like the mythical Zilch compiler that Infocom used. The compiled game can then be ran on a multitude of platforms. This can be done because Infocom created game interpreters for each platform that they supported.

Apparently, there are different versions of the Infocom interpreter, with each version supporting more "features". Infocom produced version 3 interpreters for the following games, for the Atari 8bit:

Ballyhoo, Cutthroats, Deadline, Enchanter, Hitchhiker's, Hollywood Hijinx, Infidel, LGOP, Lurking Horror, Moonmist, Planetfall, Sorcerer, Spellbreaker, Starcross, Stationfall, Suspect, Suspended, Witness, Zork I, Zork II, and Zork III. I'm not sure if Fooblisky used an interpreter, or if it used a special custom type of program.

In order for the Atari 8bit to play the new games being produced by the Inform game compiler, it has to have an Infocom version 5 interpreter. Can anyone please tell me if Infocom ever released any of the following games for the Atari 8bit?

Beyond Zork, Border Zone, Journey, Sherlock, or Trinity (really version 4).

The games mentioned above used version 5 interpreters. Some of the previously mentioned version 3 games were later re-vamped into version 5 games. You can usually tell a version 5 game because it uses more color, and is "fancier" than a version 3 game.

If <anyone> knows of, or has one of the above mentioned Infocom version 5 games, please contact me. I feel confidant that if I can find one, I can get it to run the new and wonderful games being produced by the i.f. group. Thank you!

No, not the copyright owners, but most (all?) commodore sites have closed because of the a company that is planning to revamp and sell a new version of the C-64. All the sites offering pirated stuff shut down voluntarily, and no litigation was involved.

: a. _The_More_Mature_Audience_Theory_

: b. _The_Guilty_User_Base_Theory_

I'll add a third theory; c. _The_Fear_Factor_

It's just that no Atari user, excepting jeking, has just gone ahead and done it for fear of litigation (myself included :)). It's a valid fear, especially with the current companies still selling old software. There would be sites, provided that someone has the b*lls to do it.

I think all your theories are valid as well.

Oops... It's been awhile since I've checked the cbm group. I'm mistaken
- the C64 sites are back (i.e. Frodo and Watson)

Do you think the fact that there are much better emulators for the C64 and
Apple2 series might be another explanation as to why there is so much more
copyrighted software available for those groups (i.e. ease of
portability)?

The Ace pilot is worth a lot more points, plus if you're low on fuel, he can replenish the supply more so than the regular pilots.

> Also, is there any difference in the levels of play other than having to
> save more pilots and having more ememy harrassment?

The higher levels are obviously more difficult. More Jaggi gunposts, for one. Their accuracy at shooting you is also more noticeable, making you more vulnerable after like two or three shots. Also, the planet's rotation will make it even harder to rescue pilots at night, and even then, you won't know who you're rescuing until the last second.

Speaking of which, call me a wimp, but nowadays when I play ROF!, on the higher levels, I shut off the volume, just in case. Funny thing is that even without the sound, the Jaggis' appearance still startles me. <g>

>version of the C-64.

Wow, are you sure about that? That would be amazing. I'm sure we
can agree that in the (extremely) unlikely event this were to happen
with our beloved 8bits, we would cease and desist to distribute commercial
'wares. I still can't say I understand why the Commodore sites closed, though.
Are the software houses going to suddenly start re-releasing 10-year-old
software for what is sure to be an extreme-niche market (at best)?

>It's just that no Atari user, excepting jeking, has just gone ahead and
>done it for fear of litigation (myself included :)). It's a valid fear,
>especially with the current companies still selling old software. There
>would be sites, provided that someone has the b*lls to do it.

If there's enough interest, I'd be willing to look into opening
a site, though it would probably only be operational on week-ends.

The main reason I'm so interested in this whole thing folks, is NOT that
I'm wanting to get away without paying for things. I've always been
a strong supporter of this community and have put my money where my
mouth is time and again (Transkey, MIO, PCXFORMER, SIO, APE, etc.,
etc., ad infinitum). I think there's a lot of interesting 8bit
software that is disappearing because our user base is shrinking
and vendors are either unable or unwilling to carry it. I also really
beleive that having more software readily available will help
our group survive. As an example, I paid for a shareware C64 emulator
when I saw how much interesting old stuff was available, eventhough
I never owned a real C64 before.

More commentary would be appreciated...

Actually, I think it's the other way around. The availability of
software makes a good emulator more useful. Then again, after
you have a good emulator, you'll want neat software to run on it...
I guess it's a bit of a feedback loop.

I feel like we're having a personal discussion here. Doesn't anyone
else care about this situation?

It had been awhile since I'd checked on the existence of such sites and
the comp.emulators.cbm group (until this afternoon). There used to be
more sites; some had gone down due to pressure from copyright owners.
Others were so overloaded due to the demand on their servers. Those C64
servers keep bouncing back. Might have to do with the fact that they are
foreign-based (Watson in Canada and Frodo in the Netherlands)?

The company that bought the rights to the C64 hardware was British, I
think, but I can't recall the name. I've no idea what they would do with
it. The C64 group doesn't mention it anymore - wonder what happened?

Rescue was the very first videogame that scared the crap out of me for that exact reason. No other videogame has duplicated the fright that moment gave me.

When the alien jumped on the windshield, I froze. Really, I stared at the screen bug-eyed and couldn't move a finger. My heart hate trippled and I couldn't move or think. Eventually the alien broke in and the game was over.

I still hadn't budged.

It is a bug. Super Pacman was never released, so there was little
incentive to "copy protect" it. I have two file versions, one works, one
not. My cartridge works fine.

From: b.poehland@genie.com
Message-ID: <199602232353.AA064349615@relay1.geis.com>
Source record: 85558

I have one last mint-condition 1050 disk drive I'd like to sell.

This is a U/S Doubler 1050 in cosmetically excellent condition, in the original Atari carton w/all original packaging materials. DOS 2.5, Atari manual & ICD manual included. Accessories include transformer & SIO cable. Also included with this deal are the original Atari chips removed when the ICD U/S Doubler chips were installed. (Most people are unaware that if a U/S Doubler 1050 develops a problem, you must replace the original Atari chips in order to run the Atari test software; the Atari test software will fail or give errors if you run it with the ICD chips installed.)

Price is $45 plus shipping. USA buyers ONLY!

I can throw in SpartaDOS 3.2d (disk & manual) for an extra $5.

Contact: Ben Poehland
179 Sproul Road/Rt 352
Frazer, PA 19355
email: b.poehland@genie.geis.com

PS- The floods have now subsided & Frazer is no longer under water. Pretty soggy around here, tho. Still cleaning up the mess in the house. But none of my computer stuff got wet. :)

Jason Compton (jcompton@flood.xnet.com) writes:
: Oscar Fowler (omf@rightfax.com) wrote:
:
: : #4: Despite #3 going on for quite some time, none of the
: : copyright owners have risen from the dead to hound anyone.
:
: Not ENTIRELY true, but close enough. There's the example I cited
: recently where MECC asked the Apple II site to remove Oregon Trail, but
: it was removed and that was the end of the issue. Michael Farren, an
: author for several 8-bit machines in the late 70s/early 80s has been
: guilting people a little bit on c.s.e.cbm, but that's about it.

Im glad that Oregon Train was removed, as I would hate to see such
preservation projects become 'outlaw' over such small things.

I think if an Atari Preservation Project (name?) is started, that some type
of document should be included in each arc/zip so that any vendor or author
who still carries that software knows that they can simply request it be
removed, and it WILL be.

Also, titles which are not archived should be kept on a listing that
available at the archive, which shows what vendors still sell it.

I know this might be jumping the gun a bit, but as we all know, each one
of us probably has a copy of some obscure game/program that nobody
else has, and it honestly would be sad to see them disappear forever.

: : That said, I think we should set a few general guidelines about what
: : sorts of things we make available. We should give preference to
: : things which cannot be obtained through other vendors. For example,
: : I'm sure most of us would like to see those 5200 ports that have been
: : mentioned recently and I'm sure no one can legally sell them (other than
: : Atari, of course...)
:
: Yes, things that are still commercially available are always going to
: come under fire. CD-ROMs are being made on the 64, and when the largest
: 64 retailer in the world made some nasty remarks, the compiler offered to
: remove everything still available through them.

As a first step, we should compile a complete listing of software that
IS available from Atari 8 bit vendors. Anyone with current catalogs
willing to provide a list of titles?

I'm thinking NEW software though, since there is always some random chance
that some scavager/collector like myself will turn up a used copy at
a flea market, etc.

: As for Atari, I dare you to find anyone there who realizes they own that
: stuff. :)

They seem pretty attached to thier 2600 titles, as they have repeatedly refused to allow Craig to release his Adventure port - 'Indenture' - for normal sale.

I heard Activision purchased the rights to all the 2600 titles though, so that may have been the reason.

Source record: 85763

The last information I have which may have been changed states that a work that is created on or after January 1, 1978 is automatically protected from the moment of its creation, and is ordinarily given a term enduring the author's life, plus an additional 50 years after the author's death. In the case of a "joint work prepared by two or more authors who did not work for hire", the term last for 50 years after the last surviving author's death. For works made for hire, and for anonymous and pseudonymous works (unless author's identity is revealed in Copyright Office records), the duration of a copyright will be 75 years from publication or 100years from creation, whichever is shorter.

Many copyright owners have either invested many hours or as in my case thousands of dollars in obtaining copyrights. Copyrights are to protect the owners investment either in time or dollars expended to obtain those rights. If our works are placed on the Internet without compensation then who is going to pay the Programers, Engineers,ect to keep on producing products?

Suposidly the software developers left the Atari market totaly due to what they said at the time, more copies of their product were pirated by the Atari 8bit user makeing it a loosing market, when a Company can not generate cash from a market they can not pay their help, no pay no work..same thing no pay no new products not only in this area but any area..No one buys TV's how many new TV products are going to be produced?

Hope this clears up the question once and for all?

Bob

That whole "reproduction of the 64" thing was a huge, overblown panic.
Escom (the company that owns the Commodore properties now) said they
MIGHT reproduce the 64 for Eastern European, Asian, and other third-world
markets. A panic ensued where everyone shut down their sites, and people
speculated that Escom had come after them.

I assure you, Escom is nowhere nearly net-aware enough to know what's
going on.

And yes, the Arnold site (replacing the Frodo site) is very complete,
although a bit slow from the US.

Oscar Fowler (oscar@primenet.com) wrote:

: The main reason I'm so interested in this whole thing folks, is NOT that
: I'm wanting to get away without paying for things. I've always been
: a strong supporter of this community and have put my money where my
: mouth is time and again (Transkey, MIO, PCXFORMER, SIO, APE, etc.,
: etc., ad infinitum). I think there's a lot of interesting 8bit
: software that is disappearing because our user base is shrinking
: and vendors are either unable or unwilling to carry it. I also really
: beleive that having more software readily available will help
: our group survive. As an example, I paid for a shareware C64 emulator
: when I saw how much interesting old stuff was available, eventhough
: I never owned a real C64 before.

That is another point you bring up, the possibility of loosing forever some of it. If any of my disks go bad now, I'm out of luck. I am in the process of backing them up (those that *can* be backed up), but it really pains me to think that there is no concerted effort to preserve this stuff. I saw one fellow offer to fix someone else's bad disk, provided he sends him the original, but this has got to be the exception that proves the rule that once your disks go bad, you are screwed.

I whole heartedly agree with the idea of starting some kind of archive for commercial 8bit software and would even contribute (once i get a darn modem for my atari). I really think what has kept this from happening is vocal protests from people on this group that this kind of open piracy will destroy whatever support still exists for the 8-bits. Hello? There is no commercial support for the 8 bits. What is the problem?

If vendors are worried that their stockpile of ancient software will suddenly loose its value, they should realize that making this software available will greatly increase the demand for hardware. They could shift their business to hardware sales/support and even the creation of better emulators. I believe, that like free trade is good for an economy in the long run, so free software for a dead system is better for the survival of that system in the long run.

count me in,

Ted B
(actually, i think we should follow the 'field of dreams' principle -- build an archive and they will come. Since noone is distributing this stuff now, noone wants to stick their neck out and be the first to do so. If people start posting stuff anonymously to alt.binaries.atari8bit.warez, I bet the flood gates will open (with or without the consent of the more vociferous members of c.s.a.8bit) and we will all benefit.)

: More commentary would be appreciated...

RoF is imho the best game that I have bought. I bought it in 1988 or 89 when the XEGS came out. On levels 13 and above I can't watch the tv when the pilots come running to the ship. You don't know if the pilot is human or alien. The anticipation is so fierce that I have to keep my eyes on the keyboard. That way I don't have to see the alien jump up in front of me. If I wait too long he will crack my windshield and I will die. This anticipation is what brings me back everytime. Too bad I can't find any games on the PC that are just as good.

>earlier...

I was the software manager of Atari's Home Computer Applications and System software departments up until about 6 months before Atari collapsed. There were many, many reasons why Atari failed. The biggest one was that it was poorly run from the very top (Ray baby). Up until about 6 months before the collapse, Atari was making so much money from the 2600 games that they did not need to be well run, effecient or any other damn thing. The money just flowed in huge quantites. Then when the money from the game business slowed, there was no good business foundation to keep atari going. Atari was following just about every bad business practice you could imagine.

I remember the marketing department being very concerned about Texas Instruments and worring about keeping ahead of them. The funny thing was that in subsequent jobs, I learned the TI was very worried about Commodore. And to complete the loop, Commodore was worried about Atari. Talk about the chasing your tail. The marketing people at most of these early era comouter companies did not have a clue about customers, the market or the technology. The only thing they knew how to do was to look at what the other guy was doing.

I finally quit Atari when Ray baby hired a 22 year old kid from England to be the Vice President of Atari Home Computer Software. This kid had managed a total of six people for less that a year. He was put in charge of over 100 professional engineers and managers some of whom had 25 years experince. After observing the kids clueless behaviors and hearing the inernal news about the impending $120 million loss for the quarter, I (and many others) decided to bail out. Why did Ray baby hire this guy? Well, if you know anything about Ray Kasar, you can guess. Nuff said.

I whole heartedly agree with the idea of starting some kind of archive
>for commercial 8bit software and would even contribute (once i get a darn
>modem for my atari).

One of the things that would make this easier is the ProSystem
option of APE which lets you create disk images of supposedly
all copy-protected disks. Personally, I sold all of my Atari
hardware and software a few years ago (several thousand dollars
worth!) so I have nothing to back-up other than a copy of M.U.L.E.
I bought a little while back just because I wanted to have
the original packaging.

>I really think what has kept this from happening is
>vocal protests from people on this group that this kind of open piracy
>will destroy whatever support still exists for the 8-bits.

I know that those protests have kept many of us silent for
fear of being labeled a pirate, but at this stage my interest
in creating a good Atari archive (particularly of hard to
find items) is greater than my fears of chastising from others.

>If vendors are worried that their stockpile of ancient software will
>suddenly loose its value, they should realize that making this
>software available will greatly increase the demand for hardware.

It's not just that, but we have to take into account that most
of the people left who still own Ataris are basically hard-core
collectors. Many of us want originals of things, even if we
have access to free copies. For example, after completing my
Lynx library, I started getting interested in the 7800 (mostly
because the number of titles released for it was small enough
that I could realistically hope to own them all some day).
Although I could get 7800 carts practically free, I'm paying
relatively high prices to get them complete with boxes and documentation.
Another example: the copy of MULE I bought from B&C. Someone had
offered me a disk image a while back, but I wanted the original
packaging (in fact, I'd like to have all the titles EA released
for the Atari - does anyone have a comprehensive list?)

>(actually, i think we should follow the 'field of dreams' principle --
>build an archive and they will come.

That's what I'm counting on, too... I think we could see a lot
of interesting stuff from European users, but I'm not sure if they

get the ALT groups.

I'm still waiting to hear some good reasons NOT to do this, by the way...

I believe that the company in question is "Escom", an IBM PC
manufacturer until it bought the rights to all the Commodore
machines when Commodore went under. However, that was some time ago,
and it is possible (as I have been told so, but have no further
evidence) than Escom have since decided that it would not be viable.
The plan was to release C=64s in Eastern Europe.

So, I'm going through a large number of disks a friend bequethed me with *really* descriptive titles like 'Games 19', and I came across a couple of curiosities...

#1 On one disk, there are several copies of John Harris' game "Jawbreaker" with two 'wrap' tunnels, one horizontal, and one vertical. On another disk is another copy of Jawbreaker with a different maze layout, and only one wrap tunnel, at the top and bottom. Anybody know what the story is here? Why two different versions, and which one is the 'real' Jawbreaker?

On another disk is "Attack of the Mutant Camels". This game plays very similarly to the Parker Bros. "The Empire Strikes Back", and is (I believe) the 'real' AMC. However, on another disk, there is another game that puts up a title screen just like the first, but then goes into a grid based game with cannons patroling the bottom and left sides of the grid and gameplay somewhat similar to 'Centepede'. It says 'AMC' in the upper corner during gameplay, but if this is AMC, I'm confused. There's nothing that llooks anything llike a llama at all! Yak? You there? Why would anyone pirate your title screen?

As you can see, these aren't earth shaking, but they just got my curiosity going. Any thoughts or discussion welcome.

-CJ

C O R E C T I O N / W I C H T I G / D A N G E R

THe 8 BIT Trade/House Show in Schreiersgruen Germany is hold
on Sa. the 23th of March 96.

Die 8 Bit Messe findet am 23.03.96 in Schreiersgruen statt.

8 Bit Messe Schreiersgruen 2 3 . 0 3 . 9 6

Hier nun die verbesserte Version/ here is now the Version with the right date.

First Part German second Part for English readers follows under Ger. Version

Hier nun der fehlende Teil meiner ersten E-MAIL zur Atari 8 Bit Messe.

Die Atari 8 Bit Messe am 23.03.96 in Schreiersgruen
Am 23.03.96 findet in Schreiersgruen eine neue Atari 8 Bit Messe statt,
Schreiersgruen liegt zwischen Zwickau und Hof. Einen genauen Wege-
bzw. Stadtplan erhaltet ihr von Markus Roemer oder Helmut Weidner,
die sich fuer die Organisation und Ausrichtung der Messe verantwortlich
zeigen. Die Privaten - und Kom. Haendler muessen keine Standgebuehr
bezahlen, der Eintritt ist die symbolische 1 Mark.
Es wird auf der Messe neben Ke-Soft und AMC auch das Top Mag Team
anwesend sein. Mehrere ABBUC Regionalgruppen (RAM , Franfurt,
Lengenfeld , ...) und die Haendler freuen sich auf die Besucher. Auf der
Messe wird wieder neue/alte Hardware vom AMC, KE und diversen Privaten
vorgestellt und verkauft. Der AMC, KE wird wieder sein reichhaltiges Soft-
ware Angebot aus Klassikern und neuen Spielen anbieten. Das Top Mag
wird auch mit einem Stand vertreten sein, man wird dort die neuste
Polensoft sehen/kaufen koennen, sowie Helmut Weidner's ARG Lengenfeld.
Weitere Staende von ARG's, Highlaender Soft (ST/PC - Xformer/ Turbo
Basic Vertrieb) und viele Private Haendler werden dort zu sehen sein.
Wie bei den letzten Messen kann man sich auch wieder ueber Atari im Internet
informieren koennen und an einem Stand sowohl Jaguar(incl. Cd Rom) als
auch den Lynx spielen koennen. Dort wird auch der Umgang mit dem ST/
Pc Xformer erklaert. Interesierte Besucher, Haendler die dort einen Stand be-
treiben m&#65533;chten oder einen Stadtplan oder andere Info's brauchen, wenden
sich Bitte an folgende Personen:
Helmut Weidner Hauptstr.45 08485 Lengenfeld Tel.: 037606 2688,
Markus R&#65533;mer Adresse folgt noch,
Andreas Magenheimer 06243 8476 Do ab 1900
Raimond Altmayer 06501 3678
Torsten Schall 06241 53070 e-mail schallt@worms.fh-rpl.de

Torsten Schall 23.02.96 German Version

Second Part (i hope easy to understand) English Version.

The Atari 8 Bit Trade show on Sa. 03.23.96 in Schreiersgruen/Germany
On the 03.23.96 will be a new Trade Show for Atari 8 Bit coputers in Schreiersgruen/germany held, Schreiersgruen is in Germany between the two cities Zwickau and Hof (near the border of Bavaria,Polen and the south east of Germany). A map of the city and the way to the show can you get from Markus Roemer and Helmut Weidner Who are making the show. The private and kom. trader pay no money for a place at the show, the entrace prise is the symbolic 1 Mark.
At the show will be many German trader like KE-Soft, AMC , Top Mag Team... Many German Atari ABBUC regional groups like the RAM, Frankfurt, Lengenfeld..., and the trader are happy to see you there. At the show will be new/old Hardware from AMC (Sound Phaser, Multipad), KE-Soft (some)and from many private's to look/talk at and natural to buy. The AMC, KE-Soft will also show their classic and new Software stock. The Top Mag will there with a own stand, there can you buy and look at the latest Polen Software, also at Helmut Weidners ABBUC regional group Lengenfeld. A lot more ARG's, Highlaender Soft (ST/PC Xformer Info group, Demo Coder , Distrebuter of Turbo Basic) and many more private trader will be there. Like the last German Atari 8 BIT Shows, will there be the Jaguar, Jag CD and Lynx with the latest gammes showed. Also a Dsikusssion about Atari in the Internet, how to use the ST/PC Xformer with XL-ST-PC. You can get here many informations about connecting ST's and PC's with a Atari 8 Bit computer. Interested people, Trader who want to have their own stand at the show or if you need other info's about the show like the city map and how to drive to the show, please call folowing person. Important call first because you are then sure that there is enough space for traders, visitors can't come enough!

Helmut Weidner Hauptstr. 45 08485 Lengenfeld/Germany 0049 37606 2688
or E-Mail me schallt@worms.fh-rpl.de

W I C H T I G -- D A N G E R -- SA. the 23 of March is the Show held in Schreiersgruen.

Call Helmut Weidner for a detailled city map of schreiersgruen, so that you can find the show. Bitte Helmut Weidner f&#65533;r eine Stadtkarte ansprechen.

>pay their help, no pay no work..same thing no pay no new products
>not only in this area but any area..No one buys TV's how many new
>TV products are going to be produced?

I don't think at this point there is a question of how copyright law works. I believe what everyone is saying is that at this late point in time, if these programs are not archived, some of them may be lost forever. Also, there is no intent to deprive the programmer of his investment, as it is highly unlikely he would profit at this point from the sale of the program. He received whatever compensation he was going to after his software was released. The fact that he is no longer receiving compensation is that he, or his company, is no longer distributing the software.

I think the archive is a good idea, with the provision that an author, or agent of the author, has the right to have his products removed from the archive on request.

The next SwapMeet is Monday, March 4th, 1996.

ACE of America, an All Computers and Electronics User Group, with a special emphasis on Atari. At ACE Swap Meets you might find Atari, Apple, Macintosh, Commodore, Amiga, IBM & Clones, Nintendo, SNES, Sega Genesis, Jaguar, Game Boy, Game Gear and Lynx. You could also find the following items to go with your system, such as Printers, MoDeMs, Monitors, Hard Drives, Disk Drives, Power Supplies, MIDI Devices, Mice, Joysticks, CD Roms, Cables, supplies and Accessories.

ALL COMPUTERS, GAME MACHINES AND ELECTRONICS ARE WELCOME!!

ACE Is currently holding Monthly Swap Meets on the First Monday of each Month from 7 PM, except on certain Holidays that we must reschedule due to our facility being closed. Swap Meets are Held at 1819 NW Everett at the NW Service Center 3 Blocks North of the corner of 18th and W Burnside in Portland, Oregon. USA! Table space is $10. Tables provided as long as they last. Show up early to get a good table, like 6:30 PM.

FREE ADMISSIONFREE ADMISSION**FREE ADMISSION**FREE ADMISSION**

At the March SwapMeet we have a Panasonic 9 Pin Printer offered as a Door Prize! Just show up for the drawing and if you have the Luck of the Irish. You might come away the Lucky Winner!

PLENTY OF FREE PARKINGEVERYONE WELCOME**PLENTY OF FREE PARKING**

FOR INFO CALL OUR SWAPMEET HOTLINE WITH 24 HOUR RECORDED INFO, CALL: (503)650-7196 OR FOR FURTHER INFO FROM BEN, INCLUDING TABLES: CALL FROM 3 PM - MIDNIGHT / MON-THU, FRI 3 PM - 6 PM: CALL BEN AT (503)256-9974!! IF BEN IS AWAY FROM THE PHONE, PLEASE LEAVE YOUR HOME NUMBER AND HE'LL TRY TO RETURN YOUR MESSAGE! THESE SWAP MEET SPONSORED BY ACE OF AMERICA!!

This Message is distributed throughout the Pacific NorthWest, everyone reading and their Brother is welcome to come and Attend!!

Please Direct all Replies to bensmith@teleport.com in E-Mail or call (503)650-7196 anytime.

The next SwapMeet is Monday, March 4th, 1996.
--
Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. Mon - Thurs 3 PM - Midnight. Friday 3 PM - 6 PM PST Call above # these Hours.
Proprieter of Bravo Sierra Computers: Ben Smith! Benjamins BBS (503)255-9657.
Catalogs Requested by & Received Through E-Mail! Specify Classic 8 Bit or ST.

Catalogs are FREE & updated monthly. Reply in E-Mail to bensmith@teleport.com

The next SwapMeet is Monday, March 4th, 1996.

WANTED: Dealers to sell at Upcoming Swap Meets. Dealerships sought fall into such Categories as Computer Dealers, all kinds. All kinds of Computer HardWare, SoftWare, Peripherals & Accessories for ALL Computer Makes and Types.

Also Sought are Dealers in Video Gaming Equipment, such as Video Game Consoles, Cartidges, Video Game CD Players and Video Game CDs. ALL Video Game Makes and Types. ALL Video Game Consoles, Cartridges, CDs, Peripherals & Accessories.

At the March SwapMeet we have a Panasonic 9 Pin Printer offered as a Door Prize! Just show up for the drawing and if you have the Luck of the Irish. You might come away the Lucky Winner!

Recruiting New Dealers with Membership for Dealer Value. You could setup at a full year of swapmeets, 12 Monthly swapmeets at $10 a Meet, for $120 a year, or join our group and setup ***FREE*** for a year for ONLY $50! Greater than a 50% Savings!

Also Wanted are Dealers in ALL Types of Electronics.

WANTED are Dealers in Ham Radio, CB Radio, Music CDs and other Recorded Music. Stereo Equipment also Wanted.

Also Wanted are VCR's, Video Tapes, TVs and Satelite Gear.

This is an ALL Computers, Game Machine and Electronics Swap Meet!!

Small Businesses, and Dealers Welcome and Wanted!!

NO ADMISSION CHARGE!!! PLENTY OF FREE PARKING!!! NO ADMISSION CHARGE!!!

TABLES $10! TABLES, FIRST COME, FIRST SERVE!

Swap Meet Location in Portland, Oregon. USA. At 1819 N.W. Everett St. at the NorthWest Service Center On the First Monday of each Month.

To find out about more about the Swap Meet call our 24 Hour Recorded info line at (503)650-7196 or for Live info, call from 3 PM - Midnight, Monday - Thursday, Friday 3 PM - 6 PM. Please call, especially dealers at: (503)256-9974 (VOICE/VOICE MESSAGING), leave your home number if Ben is not answering!

1019. BREAK key question.

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-23 00:00:00 UTC
From: "Jack H. Lee" <102337.2577@CompuServe.COM>
Message-ID: <4gk49q$b1i$1@mhadf.production.compuserve.com>
Source record: 85786

Does anyone know why the BREAK key is activated when you type "C" and ")" in rapid succession? (Without the parenthesis, of course.) I had discovered this quirk thirteen years ago when I first got my 800, and thought my machine might have had some problem to it. However, when I got my 130XE a few years later, I noticed it had the same problem.

I came across this back in the "old days" when I used to enjoy typing in computer programs. Many times, when I had to type stuff in like "10 COPYRIGHT (C) 1983," there would be a cut-off point to the screen. Meaning, I'd end up with something looking like:

10 COPYRIGHT (C
) 1983

Of course, hitting thes said keys also would interrupt programs, unless the BREAK key was disabled. No other key combination I've tried produced the same results.

Any ideas? I've been asking this question now and again for >quite< some time now, but no one still has an answer!

1020. "Atari800" emulator works here!

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-23 00:00:00 UTC
From: xetwnk@shell.portal.com
Message-ID: <4gkpbj$8fp@jobe.shell.portal.com>
Source record: 85787

Hello, all...

I thought I'd share a progress report with the c.s.a.8 readership.

Recently you may remember seeing messages here announcing first the existence, then an update, of an Atari 800 emulator (cleverly named "atari800") for Unix and Amiga. I've been interested, myself, in these postings and this emulator, because I don't have a PC capable of running "PC Transformer," or a Macintosh capable of running "Rainbow," but DO have access to two Amigas. I also have access to several Digital Equipment Corporation (Open)VMS workstations, a fact which will become relevant shortly.

I obtained v0.2.1 of "atari800" awhile back, downloaded it first to one of the VMS systems at work, intending to eventually download it to the Amiga at home and work with it there. However, early last week my curiosity became too great to bear, and so I unpacked the emulator files on the VMS system and started poking around. I discovered that the Unix support relies on the Xwindows windowing system, and that the Amiga support uses Amiga's own facilities -- but that, to my surprise, there was ALSO PC (Super VGA) support, AND a "text-only" mode using the Unix "curses" text-terminal "screen painting" library. The documentation and source code mentioned that this "text-only" mode provided a limited form of VMS support, but that ONLY this mode was available in VMS. Unfortunately, "limited" was the key word here: in the "text-only" mode, one might run Atari BASIC, write BASIC programs, run text adventure games, etc., but could do NOTHING "graphical," i.e. nothing requiring a graphics mode more exciting than Antic Mode 2 (GRAPHICS 0 for you BASIC programmers). I was disappointed, naturally.

On the other hand, I couldn't see any GOOD REASON for limiting VMS to "text only" mode! Often, a Unix, Xwindows programmer writes a nifty application, goes to great pains to use only features that are "portable" across a wide variety of Xwindows platforms -- then seems to assume that VMS isn't one of them and that therefore there's no point in even TRYING. This is an error, however, because today's VMS workstations come equipped with "DECwindows," which is nothing more nor less than Digital's implementation of Xwindows! If a program is written "portably," as "atari800" is certainly intended to be, then with just a few small changes the Xwindows features can be supported in the VMS environment.

So, to make a long story short, that's what I did. I am pleased to announce that for the past week I have been happily running "atari800" v0.2.1 on an OpenVMS Alpha (V1.5-1H1 -- old, but serviceable) workstation, under DECwindows/Motif v1.2. (It ought to work just as well under nearly ANY version of (Open)VMS with DECwindows.) I get a nice little fully-functional Atari-800-in-a- window, just as I'd like. It took a few source-code changes here and there, but these are easily summarized if anyone is interested.

Authors, write me!

Now, as to what I've run so far... I had a few Atari programs already on hand -- waiting to be downloaded to my Atari! -- on the VMS system at work, so tried those first: first, of course, the Atari OS and BASIC cartridge "ROMs," then all the contents of the .XFD disk-images included in the PC Transformer v2.5 (XF25.ZIP) distribution, including AtariDOS 2.5 and several BASIC programs. Then John Harris' unreleased, unfinished "Bankster" binaries, Bill Kendrick's "MAKEMAZE.BAS" from a long time ago, and most recently a file copy of Pac-Man that I uploaded from home just last night! The emulator is quite flexible about all of this: you can specify at least two (maybe more; I don't HAVE that many) .XFD files to be used as D1: and D2:, can "change disks in D1:" from within the emulator, and can access individual Atari files from the external environment by specifying "drive" H1: (for "untranslated" file reading/writing) or H2: (automatic ATASCII <--> ASCII translation). It's VERY NICE. Oh, and the external directory which is to correspond to H1:, can be specified either on the command line or by defining (in VMS) a "logical name" (roughly equivalent to Unix "setenv()" symbol). I used THAT capability to load Pac-Man from a remote system's disk, across my in-house DECnet network, directly into the emulated Atari, by doing a L(oad) H1:PACMAN.EXE directly from the Atari DOS menu. :-)

I also uploaded Star Raiders, and had it NOT run. I got a lot of "unrecognized opcode" error messages on "standard output," outside the emulated Atari, upon L(oad)-ing H1:RAIDERS.EXE. To eliminate the possibility of a "bad upload," I'm going to try running that copy of Star Raiders on my "real" Atari (I didn't do this BEFORE I uploaded it), then, if it runs THERE, will try uploading it again. If it STILL doesn't work in the emulator, well, I guess I'll have something to discuss with atari800's author(s), and maybe we'll ALL learn something! (Actually, before that, I'll also download the latest update of atari800 -- if I can get the FTP site to talk to me. I tried a couple of days ago and the site just "went to sleep" for ten or fifteen minutes when I tried to 'get' the file. *Sigh*

Anyway, most things work "as described" -- that is, as described for the *Unix* (Xwindows) version! -- but I have run into a few problems so far:

- I don't seem to be able to give the emulated Atari "Escape" keypress. Pressing the "ESC" key on my keyboard causes the emulator to deliver a diagnostic message to "standard output" (outside the emulated Atari environment): "Pressed Keysym = 60." Pressing F11, which in some circumstances in VMS is mapped to an "Escape" keypress, delivers a similar diagnostic: "Pressed Keysym = ffc8." Finally, typing "ctrl-[" (right-bracket), which, in ASCII, is the *same* character as "Escape," causes the emulator to receive a "[" (right-bracket) character; apparently the physical keypress is passed to the emulator for interpretation, and the emulator declines to apply "CTRL" to "[" to get "Escape." Uhm, what does a "real" Atari do when you type "ctrl-[" ? I don't have one here at the moment to check... :-)

- I don't see F7 acting as a "BREAK" keypress, as the documentation says it "should." However, the documentation does note that this particular

feature "doesn't work under OpenWindows," so maybe it ALSO doesn't work under DECwindows. Uhm, does anybody know WHY it "doesn't work?" Maybe "BREAK" could be mapped elsewhere?

- I find it just the tiniest bit awkward to use ALT as the "Atari key," for switching back and forth between normal and inverse characters. DECwindows (and many other environments, these days) uses the Motif window manager, which intercepts certain ALT key combinations in order to raise, lower, resize, move, iconify, restore, and close windows. When I go to "lower" the Atari800 window to look at something else (for instance, the "usage" document in a text editor, for reference), I have to press and hold ALT, then type "3". This lowers the window (places it behind all others), but ALSO toggles the emulated Atari between "normal" and "inverse" video... Could any OTHER mapping be used for the "Atari key," perhaps?

- Even less serious -- have any of you actually tried to play a video game on this emulator? One joystick is available, emulated by the position of the mouse pointer relative to the center of the emulation window, and believe me, this makes playing Pac-Man VERY "different!" It can be done, but it takes a lot of getting used to... And what in the world are we going to do for SECOND, THIRD, and FOURTH joysticks, if this truly IS an "Atari 800" (note: not (yet) XL or XE) we're emulating? Hey, how does PC Transformer do it (if at all)?

Ah well.

These very SLIGHT difficulties notwithstanding, "atari800" is a mighty impressive piece of work. It is a thrill -- no, it goes beyond "thrill," it is COMPLETELY INCREDIBLE and MINDBLOWING -- to see Atari Pac-Man running on the screen of my VMS workstation! Among other things, I will no longer have to worry about "what will happen when my Atari disk drives finally give up the ghost!" Also, I will have something to do between real projects... :-)

Looking forward to grabbing the next update of atari800,

Chris Chiesa

I think that Escom (German clone maker) owns the rights to the C=64.
They are currently making Amiga machines. I think that their plans
were to release cheap 64s in Eastern Europe and Asia. I really don't
know if that will happen, though.
-scott tirrell
Hopefully someone will pick up the rights to the Atari 8-bit line
and we'll see some clones ;-).

I had the same problem for two weeks on various machines around here.
Then I finally downloaded 0.3.0 successfully and put it on my Atari
web page. You might have better luck getting it from there.
http://er4www.eng.ohio-state.edu/~funkr/Atari/
(I haven't had time to look at this new version yet, though.)

Funny, a friend of mine is having the opposite problem: trying to get
her files from an ancient PDP-11 running a variant of VMS (which
neither of us has a clue about using anyway).

This makes no sense anyway. Escom would have no right to go after
these sites no more than Commodore would. They would only be able to
go after the site owners if they owned the copyrights to some of the
software there. Whether they owned the rights to the C64 or not is
irrelevant.

Oooh. "Aces?" Something ELSE I don't know about and have never seen!
Is an "Ace" worth more points or does his pickup grant any other special
powers?

(All of this is doubtless the problem with receiving other people's old
games, for which they have long ago lost the docs. Anybody have ROF docs
they could photocopy or otherwise paraphrase for me?)

Hmm, yeah, I'm such a lousy pilot that I take it for granted that I'll
be able to turn around and reapproach if I miss 'em or don't land near
enough to pick 'em up. :-)

The other thing I like to do, incidentally, is occasionall ly wait until a
pilot is running toward me, then turn on the engine and incinerate 'im.
What a blast, hehehehe...

Wow, funny you should mention that. I just got it last night from a buddy of mine who downloaded it from CSS "Computer World Jr." BBS recently. It's cute.

Trouble was, I had a bad sector on the disk I downloaded it onto, and part of the intro text was garbled. Had to phone up my buddy and get him to read me the hex codes of that one sector's worth, and patch the disk back into working order. Sheesh... the things I'll do for a videogame fix. Good thing I'm ABLE to do it. :-)

Just thought it was interesting. Feel free to ignore this post.

[Details on how copyrights work deleted]

I don't think we need to discuss how copyright law works.
That is well established and not in question. The real
question is whether or not we feel that abiding by copyright law
which is protecting software no longer in distribution is
more important to us than being able to actually use that
software and improving the resources of our community.

>Many copyright owners have either invested many hours or as in my
>case thousands of dollars in obtaining copyrights. Copyrights
>are to protect the owners investment either in time or dollars
>expended to obtain those rights. If our works are placed on the
>Internet without compensation then who is going to pay the
>Programers, Engineers,ect to keep on producing products?

No one is receiving compensation for most of the 8bit software
that is sitting unused due to these copyright issues. No one
is likely to receive any compensation if the situation remains
unchanged. I think that by making this software available, we
are helping many and hurting no one.

I am a programmer also, and live off of my compensation for
programming. I think copyrights are important and necessary,
but they are often taken too far. I don't think Atari still
relies on compensation for the 8bit version of Defender for
its financial well being, and they're fools if they do.

One important point to make here is that we're talking about
making *specific binaries* available to people. We're not
talking about generally disregarding the intellectual
property of the copyright owners. More specifically, if
there is any 'compensation' to be made from these
wonderful old programs, it is in NEW versions or REVISIONS
of the software, either for the 8bit or other platforms.
The copyright owners are not being deprived of this
possibility by our actions, and we are not saying that anyone
else has the right to create such new versions or revisions
without compensation to said owners. If anything, making
the old programs available can only help regenerate interest
in them and in new versions.

I'm really surprised that this is such a big issue.
It seems to me that in the case of defunct software such as
we're talking about, we all (authors included) can
only GAIN from its redistribution.

>PLEASE post on this newsgroup or directly ask those guys if they could release
>the copyrights or turn the games into XFD images by themselves.

Although companies MAY be generous enough to release the
copyrights to the Atari 8bit versions of these games (highly
doubtful, actually) - I think it would be difficult to do
so without generally releasing the copyright altogether.
In other words, they would make the software public domain,
and anyone could write Ballblazer for the PC or the Mac.
I wouldn't hold my breath...

I'm pretty sure Fooblitsky does not use the text adventure
interpreter. It is an entirely different kind of game. It is more
like a computerized board game where you move your token around the
gameboard. Maybe a little like _Clue_ where you gather information
about which items are the "chosen" ones. As I recall the display is
colorful and interesting-looking.

I have a copy for sale, if anyone's interested. I am asking $20.

>(I haven't had time to look at this new version yet, though.)

I also had this problem with downloading from ftp.demon.co.uk. I tried
every half hour for two days to download it and no success.
I found the best way was to use netscape and set the ftp proxy to
rs501.th.physik.uni-frankfurt.de port 8080. This way the request gets
routed through Germany and then to England. I ftp'ed it in under 2 minutes
this way.

The real "Jawbreaker" is the one that has the Pac Man-like maze. There's a very interesting story concerning that in Steven Levy's "Hackers." John Harris originally was intending to do the best Pac Man game there was for the Atari computer, but was forced to make changes due to copyright problems (and Atari giving him and Sierra a hard time about; Atari had just bought the home rights for it).

Anyway, Sierra clumsily tried to cash-in on the success of "Jawbreaker" and made the sequel without Harris. It was absolutely terrible, IMHO. Big, clunky graphics, but absolutely a big retread without much variation over the original.

Check out the Umich Atari archive:

http://www.umich.edu/~archive/atari/8bit/Xf2/xf25.zip

This file is an 8-bit emulator for the 1040ST, but it has the 8-bit ROM
images in the archive for both the 400/800 and the XLs.

Remember that on a real Atari keyboard the [ ] characters are shift-, and
shift-. . Ctrl-[(ctrl-,) returns an ascii code of 0 (Atascii heart),
which is not the same as ESC. The ESC key is standard ascii 27. (Those
are the numbers you get from OPEN #1,4,0,"K:":GET #1,A).

Agreed. I do lots of things that are illegal. Who here has never driven over the speed limit, had a beer underage, smoked a joint in college, etc? Sometimes law and personal ethics are in conflict. I stick with my personal ethics when that happens. Don't most of us?

>>Many copyright owners have either invested many hours or as in my

I agree wholeheartedly. I develop applications for a living also. If one of my current projects gets published, and demand dries up for it ten years from now, I would much rather enthusiasts "bootleg" it and keep it alive, than for it to disappear because legitimate copies cannot be located.

>One important point to make here is that we're talking about

>in them and in new versions.

Some cool businesses like Smith Engineering (trademark and copyright holder on all Vectrex wares) release them to be freely distributed for non-profit use. Some 8-bit developers who have recovered copyright from their scumbag publishers have stated that they don't really care if anyone bootlegs their 8-bit games today - as long as they don't try to claim the game is public domain or otherwise infringe on the trademark and copyright.

As for any distributers who are holding legit copies of old games - I'm sorry, but it is not *your* intellectual property, and there is no guarantee of continued merchantability of obsolete software.

I'll be waiting for the flames....

>I wouldn't hold my breath...

Smith Engineering has released the rights to *anyone* who wishes to
duplicate any old Vectrex games, if it is *not for profit*.

That does not mean that anybody can write Minestorm 2000 and publish it
for $50 bucks.

I haven't seen their legal statement, but if I held copyright in
"Beneath Craggi Lines", why couldn't issue a legal notice stating
something like: 'I, Mike St. Clair, release to the generall public the
right to freely distribute the Atari 800 and Commodore 64 versions of my
property "Beneath Craggi Lines", as long as the distribution is not for
personal profit. "Beneath Craggi Lines" remains my trademark, and the
visual, auditory, and gameplay elements of "Beneath Craggi Lines"
remain copyrighted, with all other game content.' ?

Obviously the language here is more for the layman, and not true legalese.

Excuse me, but isnt there another answer we havent considered?

Copyright laws dont come out of thin air. They were created by us, through our elected representatives. We have the power to change them. Why not create some sort of new law which would place computer programs into the public domain if certain factors exist?

* The computer for which the software was created is no longer being manufactured and has not been manufactured for the past (10?) years.

* The company owning the copyrights on the software in question is no longer in business and the owner of the copyrights cannot be located after a diligent search.

* No objection is made by the copyright owner within a reasonable period of time once the software has been placed into the public domain under the provisions of this section.

* The software which loses copyright protection is made available to the public, rather than being sold for a profit (However, companies might need an incentive to copy and distribute software so maybe we do not want to restruct profits).

Obviously, this proposal would need to be more carefully tailored but thats what the legislative process is for. The computer software industry would have the opportunity to consider and respond to our ideas. Who knows? Maybe a concensus could be reached?

Given the option of changing the law after a lot of hard work or going ahead and violating copyright since we are unlikely to be prosecuted, Im sure most people will choose the latter route. But perhaps we shouldnt rule out contacting our Congressional representatives...

A good suggestion, and something I hadn't even considered.
I'll definitely ask a couple of lawyer friends of mine what
it takes to get new legislation going. However, even if
we were to be successful, personally, I'm not willing to wait
another 10 years before doing all this becomes legal...

>* The computer for which the software was created is no longer being
>manufactured and has not been manufactured for the past (10?) years.

I don't think it's been 10 years since the 8bit stopped being manufactured.
I'm pretty sure there were XE's being made up until the early 1990's -
anyone know for sure?

>* The company owning the copyrights on the software in question is no
>longer in business and the owner of the copyrights cannot be located after
>a diligent search.

What constitutes a 'diligent search'? I'm sure we could find the
copyright owners to pretty much every piece of software out there
if we tried hard enough. It's not like these people are in hiding.

>* No objection is made by the copyright owner within a reasonable period
>of time once the software has been placed into the public domain under the
>provisions of this section.

I suspect once you tell the copyright owner that you want to place
his/her software in the public domain, suddenly they will have renewed
interest in it and refuse to let you do it. Obviously this wouldn't be
true in ALL cases, but you'd be surprised. For example: remember what
a hard time Darek Mihocka had getting the rights to use the Atari OS
ROM code for the ST version of his XFormer? What possible use would
Atari have for it? Where they making any money off of that code anymore?
Where they afraid Darek would become filthy rich? There didn't seem
to be any logical reason for their refusal. It seemed that XFormer
was something the entire Atari community wanted and it would not hurt
a fly. Despite all this, Atari refused for quite a long time.

>* The software which loses copyright protection is made available to the
>public, rather than being sold for a profit (However, companies might need

>an incentive to copy and distribute software so maybe we do not want to
>restruct profits).

Once someone starts making money *directly* off of your product, then I think
you deserve some compensation.

At any rate, it's a good suggestion, though a great deal of work would
be involved, and frankly, I don't think it would ever pass. The general
trend is for copyright laws to become more restrictive, not less so.

Maybe you can, I don't know. The only reason I said it might be
difficult was that it seemed to be a good explanation for why we haven't
seen this already with many classic titles.

Aside from the copyright issues (I'm not going to touch that)... I thought you wanted to archive this stuff. A newsgroup (especially an alt newsgroup) is the worst medium for archival. Newsgroup posts expire, and alt newsgroups have horrible propagation (i.e. many sites don't get alt, alt.binaries, or alt.binaries.warez newsgroups). If you're going to do it, do it right and set up an ftp site.

If you're using a newsgroup as the medium, you can't logically use archival as justification.

: Actually, it said the Atari stock-holders would own JTS, but the merged
: ompany would be named JTS... odd....

Well, I remember it being something involving "60% Atari shareholders"
but if that were the case, why would JTS' management run the new
company? Surely, 60% of the voting stock would be able to keep their own
people in place. Unless they're giving Atari shareholders preferred
stock in the new company but saving the voting rights for JTS.

The fact that Atari didn't seem to bother replacing its CEO (the CFO made
all of the statements for Atari) may suggest that Atari unfortunately
isn't going to be of much importance. Which is really a shame. Hell,
I'd take the job. :)

: irrelevant.

An excellent point, and one I'd forgotten about at that! Commodore DID
own the rights to a number of early 80s titles (they had a rather strict
policy on third party publishing. For a time, virtually all C-64
publishing had to go through them, which is why you can still find
Infocom games published by Commodore in the 64 version.)

If I'm not mistaken, software can be released as freeware (not PD) and the
copyright owner still retains all rights to it, specifically restrictions as
to selling it for profit and modifications to the original program.

Some pilots have purple helmets which the game promptly informs you that
"IT'S THE ACE!" which means you get more score and more energy from a
successful rescue of the pilot.

The only differences in later levels (I know of) are the odd alien yob
punching your windshield and nighttime.

Since my Rana 1000 disk drive died away some time ago, I was looking
for a used drive that can read my collection of DD disks. Now someone
offered an Atari XF551 to me, but he was not sure if it could really
read/write DD (i.e. 256 bytes/Sector). Can the XF551 do that or can it
only read/write ED (128 bytes/Sector, but more sectors/track)?

You can't. When you release something into the public domain,
it's released and you have no rights to it whatsoever, so, you can
place no stipulations on what is or is not done with it. Anyone could
then publish it and sell it or do anything they wanted to with it.

Adam,

I can't help you on the DOS 3 issue, but, it's fairly easy to
copy any non-copy protected disk to an *.xfd file for use with an
emulator.

First, compress the disk into a file with something like DCM.
Second, upload it to your pc with a modem or null modem cable.
Third, using xformer, and running DCM, uncompress the DCM
image back onto a blank disk image.

TADA! Instant bootable disk image. I hope this helps a little.

Ah, I don't thing it's "Escom". That is a IBM Trademark meaning
"Enterprise Server I/O Connection". It's a Mainframe Fiber Optic I/O
Interface that operates at 20 MegBytes/Sec and from 3KM to 67KM in
length.

You're right, but setting up an archive requires that someone
devote space for a site. With the copyright issue being such a big
deal for many people, this is very difficult. Until we find someone
willing and able to set-up a site, the newsgroup will serve as a way
to distribute stuff that people don't have.

>If you're using a newsgroup as the medium, you can't logically use
>archival as justification.

The archive 'justification' was brought-up secondarily. It's an excellent
reason, but, you're right in that we can hardly call the newsgroup an
archive.

I just got the cartridge version of Sega's Frogger.
I remember way-back when I had loads of cartridge dumps on
disk, the version of Frogger I had contained lots of
great music that played throughout the entire game.
I was disappointed to find that the cart, being otherwise
identical to what I remember on disk, is missing all the
great music. Does anyone else have the disk file? Why
did it have music and the cartridge not? Inquiring minds
want to know!

(My $.02 about copyrights, piracy and archiving old titles.)
Two things:
1.) I want to preserve the vendors that are left in the U.S.
(Eurovendors are selling new stuff from Europe. I
definitely don't want to see their stuff pirated. One
U.S. vendor AFAIK, B & C, goes to the trouble of
getting these titles for sale in the U.S. So,
I'm excluding new Eurotitles from this 'freely
distribute' type of concept.)
2.) I want to respect the rights and wishes of the
copyright holders of old titles.
3.) I would like to see free distribution of old titles
via the internet by someone who has the balls to do it.

One thing people may miss, maybe even the vendors
themselves, is that most people, what few there are, are
like collectors. If we see a 'new' title, a cracked,
pirated one, that we've never seen before for the 8-bit,
that we like, we want to see the docs and own a legitimate
copy of it, in many cases even if we don't own the hardware
to actually run it. I would dare say that many people who
want to run classic titles on emulators would like to own an
original. So, what I'm saying is, people who actually want
to run classic games on the computer, and people who just
want to collect the stuff ARE the market for surviving A8
vendors.
In many cases the old A8 titles' copyright holders are
just not going to get any more royalties from these old
tiltes. The vendors who sell the titles are selling stuff
that was produced a long time ago and paid the authors and
copyright holders long ago. I would guess the producers,
and especially the authors, like the idea that people want
to preserve their work.
(My $.02 in a $.69 message.)

Don't worry, it's the former... This has been discussed repeatedly in this group and in the VCS-related ones, but it still bears repeating. Too many games now are more like movies with hardly any interaction, or if there is a significant amount of interaction it's just tacked on as an afterthought. In the old days there were such stringent limits to the graphics that a game had to be _fun_ first and cool-looking second.

> Why don't aliens smash your winshield in Descent?

he heh... that would would be cool! (Beavis voice)

> Long live the 8 bit and the members

Amen to that--I still think the best multiplayer game on any system is not M.U.L.E. but Warlords on the 2600. The amount of competition, backstabbing, and trickery that four people can put into that game is amazing--and it's basically just a variation on Breakout.

FWIW, though, there are some people currently making games who seem to care about play value as well as graphics. I just bought a 10-pack of CDs for my Mac including several games on it from Bullfrog Software. I've been playing Syndicate and Theme Park like mad. I wish those had come out for the 8-bit 10 years ago (with simpler graphics of course, but the game mechanics could have been pretty much the same...)

If I remember right, it was a matter of space. The disks had about 88K, where
carts were limited usually to 8 or 16K. Seems like Zaxxon was the same way.

Now, comes the GOOD news! I now have about 4 inform games for the 8bit, available on my bbs for downloading. These are: Alice3, Oedius, Toyshop, and Adventure. I'm working on the mst3k detective adventure right now. While playing these games, I kept thinking that the "Golden Age Of Text Adventures" in reality, is right here and now! Indeed, it appears that we can expect a resurgence of quality text adventure games, of the same quality of the best Infocom games.

What is the name of your inform game? Would you care to compile it to v3, for the purpose of allowing atari 8bit owners the pleasure of playing your game? I would be willing to do it myself, if you are too busy.

Also, thanks for the reply!

I have recieved your invitation to the show and also ANG has received
your invitation. We are sorry to say that we will not come to the
show. It is simply too far for us. Why do you organise a show only a
few kilometers from Czechie?

Maybe next time!

P.S. the address of Stichting Pokey has changed, I am living now in
Schiedam. You can send any letters or invitations to: Stichting Pokey,
P.O. Box 798, 3100 AT Schiedam, The Netherlands.

Greetings, Fred Meijer

Thanx Bernard for letting me use your account!

Just a reminder to folks who haven't yet seen Hard Software's "Joyride"
demo. GO GET IT! Even if you have an NTSC 64K 800XL, it'll work 99.9% fine!

And it's EXCELLENT. I hope to have a review of it (with screenshots (which,
although better than a text-only review, is nothing without the awesome
animation)) and some other demos and stuff on my Web page some time soon.

You'll hear about it when I do. :)

: that are available to the public??

You can download games and disks (in DCM format, the official standard)
from Univ. of Michigan's FTP site:

atari.archive.umich.edu [or one of it's mirrors]

My favorite way in is via Gopher:

gopher.archive.umich.edu [select "Merit Software Archives"]

Go into the "atari" directory, and then into the "8bit" directory. If FTPing,
remember to switch to BINary mode!

If you need to convert a DCM disk image into an ATR (SIO2PC) disk image for
use with PC Xformer (or SIO2PC or APE or Rainbow or Atari800), then simply get
DCM2DSK for MSDOS, or DCM2ATR for Unix/MSDOS. I'm not sure what there is in
the ways of DCM->ATR for the Mac.

: it's released and you have no rights to it whatsoever, so, you can
: place no stipulations on what is or is not done with it. Anyone could
: then publish it and sell it or do anything they wanted to with it.

It's not being suggested that these be released into the public domain.
Amstrad didn't release the Sinclair Spectrum ROM into public domain, it
released it as what is commonly known for software as freeware--copyright
remains property of the owner, but the data itself may be freely
redistributed provided that nobody's making money on it. Very simple,
really, and not entirely uncommon.

The two major reasons this doesn't happen much with old software are:

1. The copyright holder feels they can squeeze a few extra bucks out of
it. Topping this category would be Activision, who is finding that by
simply throwing a bunch of Infocom games on a CD-ROM or finding an
emulator and digging up cracked images (no joke) of old 64 software, they
can turn a good profit. I'd imagine Electronic Arts won't be releasing
much, but that's not always such a problem since many of EA's 8-bit
titles were copyright to the author.

2. The copyright holder, quite simply, doesn't know there's an actual
demand for his/her software. If there's an 8-bit game you're dying to
see again but can't find it to save your life, that may be news to the
author or owner who thinks the work was forgotten with the end of the Reagan
era.

Well, I guess that's an issue for IBM Legal to transmit to Escom legal at
20 megabytes/sec, because yes, there is a German company named Escom AG,
they're not ashamed of the name, and they really did purchase the bulk of
the assets and holdings of Commodore in early 1995.

I believe you can execute the command

POKE 731,1 (disable)
POKE 731,0 (enable)

on an XL/XE computer, I am not sure about the 400/800 models.

Also, the delay before the repetition starts is stored in
address 729, the repetition speed is stored in address 730.

The "reset" button restores all values if you are using Atari
BASIC.

Well, Copyright owners are readily available most are too lazy to look in the right place to find them. They can be found in the Library of Congress where the product is registered.

What you were saying about changing the law is without merit. How would you like it if I came along and said I wanted your girlfriend or wife and took her just because I wanted her? You left he dormant for a while so therefore I want her..!! You don't like it so I'll get a group together and get the law changed so I can have her..??? Sounds good to me?

RM> Optic I/O Interface that operates at 20 MegBytes/Sec and from 3KM to
RM> 67KM in length.

Escom is a European based PC clone manufacturer. They bought the intellectual
rights to Commodore and their products, and now manufacture the Amiga (in
various guises) and C-64.

Surely, your abbreviation would be Escon, not Escom? Anyhow, it's all academic
really, since none of this has anything to do with Atari 8-bits.

Hello Achim,

AH> offered an Atari XF551 to me, but he was not sure if it could really
AH> read/write DD (i.e. 256 bytes/Sector). Can the XF551 do that or can it
AH> only read/write ED (128 bytes/Sector, but more sectors/track)?

The XF551 can do SD, ED, and DD. Not only that, it's double sided too.
Obviously, it won't do DS/DD under DOS 2.5, but there are various other DOSes
that do support it. I use SpartaDOS X, myself.

Be aware of one of the peculiarites of the XF551: Unlike the 1050/810, it's
not possible to format the back of a disk to use as a 'flippy', unless you cut
indexing holes in the jacket, over and above the extra write-protect notch. I
believe it was possible to buy such floppies at one time, but probably not any
longer.

: TIA

: Ted B

Ted,

Your 800XL requires 5 volts DC at an amp or so. B & C ComputerVisions'
catalog lists two power supplies for Atari XL and XE computers. The
catalog numbers for these items are: PRA053 for a 1 amp supply, $15.00,
and PRA006 for a 1.5 amp unit, $20.00. B & C's phone is 408-986-9960.
Hope they still have power supplies left.

Steve

: from the 2600 games that they did not need to be well run, effecient
: or any other damn thing. The money just flowed in huge quantites. Then
: when the money from the game business slowed, there was no good
: business foundation to keep atari going. Atari was following just
: about every bad business practice you could imagine.

a few gems:

o atari manufactured more 2600 ET Phone Home cartridges than
there were 2600s in the world to run them.

[possibly apocryphal -- but not impossible]

o the real problem with ET was that, as a game, it sucked. atari
marketing tried to spin ET as the "world's first emotional video
game." gimme a break...

o i saw a $250K run of Robotron ROMs go into the landfill because
the SQA department and the s/w engineer in question hadn't
tested a particular ROM configuration.

o project Falcon was gonna save the company. it was super-
secret, it was revolutionary, it turned out to be ... essentially
a telephone. they were into double-letter board revs [read
this as: they really didn't know how to design a telephone] before
the project was canned.

o i found this out after the tramiels took over and were going
through the books: there was an office in new york where fifteen
or so paychecks were sent every other week, but apparently no one
actually showed up to *work* there. hmmm....

atari had a *lot* of VPs. when we were ramping up the ST project,
we got to tramp through a warehouse and pick our office furniture.
most of the engineers wound up with VP desks....

There is an archive that's up on ftp.funet.fi, under pub/misc/if-archive. You
can also get to it at ftp.gmd.de. I left the information in a previous post.
But anyways, there's some atari adventure games, plus some C source code to
port atari Infocom disks over to *.z3 file format. Both one and two sided.

You might be right, about Fooblitsky not using an Infocom interpreter. But Infocom actually did create interpreters that can handle both graphics and sounds. They also handled mice and "windows". Those interpreters were (I think) version 5 and above.

Unfortunetly, it appears that Infocom never did a version 5 interpreter for the Atari 8bit. From what I've gathered, they used portable c to create versions 5 and above. Cc65 wasn't available back then, though even it probably couldn't easily handle everything in the portable c code.

However, of the various inform source files I've had a chance to port over to the 8bit, I've ran across only <one> that couldn't easily be compiled to a .v3. This was because it used more than 8 attributes for some objects, which requires .v5, or above.

I'll keep working on compiling and porting various Inform games over to the 8bit.

(Bob K. talks about leaving his wife alone, but not wanting
anyone to take an interest in her.)
Ok, so you leave your wife in California. You're done
making a living selling copies of her, now you move to
Tahiti and start getting more wives to make a living off of.
You maybe think of your old wife from time to time and
wonder how she's doing. You call her up and find out some
other men have taken an interest in her, but these guys want
to respect the rights and wishes of her husband. These guys
want her, but she belongs to you. Ok, so now they put her
up where other people can take a look at her. Some take a
look and want to have a legitimate go at her. But, alas,
she's no longer available through legitimate channels.
Nobody knows how to contact you to see if you'll let them
have a go at her, you're in Tahiti with some new women. I
can't take this much farther, but what's the problem if a
bunch of guys want to play with your wife, I mean take a
look. Nobody's going to take her, duplicate her and start
selling her under their name, they just feel she has value
and want to admire her. Anyways, B. Klass did this analogy
and it don't fit too good.

1096. Re: Can anyone ID these games?

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-25 00:00:00 UTC
From: jharris@sierranet.net
Message-ID: <31308637.35034269@news.icinet.net>
Source record: 85671

>#1 On one disk, there are several copies of John Harris' game
>"Jawbreaker" with two 'wrap' tunnels, one horizontal, and one vertical.
>On another disk is another copy of Jawbreaker with a different maze
>layout, and only one wrap tunnel, at the top and bottom. Anybody know
>what the story is here? Why two different versions, and which one is the
>'real' Jawbreaker?

There are actually _three_ versions of Jawbreaker that got shipped by
On-Line Systems, but one of those was an accident.

The first version was the one with the single wrap tunnel, which was a copy
of the original Pac-Man maze. On-Line got sued by Atari for copyright
infringement, and one of the defense strategies was to show that there was
a game prior to Pac-Man that had a similar gameplay of "eat the dots in a
maze while avoiding computer-controlled bad guys". If you remember a game
called "Head-On", which had a car driving around concentric rectangular
tracks with places to change 'lanes', it does fit that description. I had
actually programmed a version of Head-On awhile before I did Jawbreaker,
and what we decided to do, was to create a special Jawbreaker version that
looked somewhat like the rectangular Head-On layout, in an effort to show a
product that theoretically looked like it could be in-between Head-On and
Pac-Man, as opposed to post-Pac-Man. Someone at On-Line liked the dual
wrap tunnels, and decided to ship this game even though it was only meant
as a court prop. This version did not play very well, because the happy
faces tended to get stuck in one 'lane' and would just keep going round and
round. On-Line got complaints about it, but also got publicity about a new
version that had dual wrap tunnels, and so I decided to make a "real" new
version with an original maze layout and two tunnels. The result was the
final version of the product that was shipped.

So in summary, there are three versions, and although they are all
technically "real", only versions 1 and 3 were supposed to be shipped.

1. Original Pac-Man maze with one wrap tunnel.
2. Very rectangular-looking maze and two wrap tunnels. This version won't
have any passageways that twist and turn in different directions.
3. Two wrap tunnels, with an original maze layout more in the style of the
original version.

>On another disk is "Attack of the Mutant Camels". This game plays very
>similarly to the Parker Bros. "The Empire Strikes Back", and is (I
>believe) the 'real' AMC.

That is the real AMC. I haven't seen the other game you described, I don't
think.

And if one needs to remove the clicking sound on the 400/800
series, Antic published a program called "Beat the Beeps!" that
did the trick just fine. It's the 2/85 issue.

1099. Re: Sega's FROGGER

Newsgroup: comp.sys.atari.8bit

Message-ID: <4gqn3m$eh8$2@mhadf.production.compuserve.com>
Source record: 85674

The cartridge version of "Frogger" is from Parker Bros. They revamped (watered down, I guess) the graphics somewhat, and omitted the music, save for the "Frogger" themes itself. Other than that, the gameplay and sounds were identical to the original.

The original (and superior version, IMO) was from Sierra On-Line, by John Harris. Considering what happened to him with this game (having it and the only copy of source code stolen from him during some computer show), it was certainly a masterpiece for its day.

1100. Connecting a hard drive to an 800/800XL

Source record: 85675

I am looking for a way to connect a hard disk to my 800XL that preferably doesn't cost too much money. I have access to a 170 MB Maxtor IDE hard drive, and I'm sure I could pick up a cheap SCSI drive if necessary.

What is the simplest way to do this? What do I need? I usually use DOS 2.5F, so I know I'd have to get a copy of SpartaDOS or something similar. Can I boot off this drive and load programs? Would I need a memory upgrade as well? I checked the FAQ but I didn't really understand what those devices are or how much they would cost.

Best,
Jamie

It was September 1986. Volume 5, number 5. The programs should be on
the net somewhere, If not let me know and I can mail you a copy. I don't
remember exactly how it worked, but I think the user attached it to a
shortwave tuned to a rebroadcast of the WEFAX images. It does not
directly tune in signals from "the bird".

I should have made clear that that statement was conjecture, and not
known fact. Please read it as "IMHO, ...".

Okay, back to the point. Are you saying that you are the programmer of
Super Pac-Man? (You are not on my list of known Atari programmers). If
so, congradulations on a wonderful job. Pity Atari never released it.

First question: do you know _why_ this particular cart was lost?

First statement: Many Atari programs floating through the ether of
unreleased products have become modified or corrupted over the years.
Some versions of the groundbreaking Lucasfilm pre-releases lock up halfway
through, and it took me years to get a working Bezerk (finally I now have
the real cart), and the majority of cartridges I have copied were not copy
protected. In particular, Atari brand cartridges. So I had a hard time
with the statement that an unreleased version of a program had an inbuilt
copy protection. How would you test and debug the program if it tried to
write over itself? I can't imagine a developer constantly burning and
testing eproms to check on the status of his software...at least not for
the Atari 800 in the mid 80s.

1103. Re: Atari, JTS Corp. Merger

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-25 00:00:00 UTC
From: msmith@aol.com
Message-ID: <4gr149$8t7@newsbf02.news.aol.com>
Source record: 85678

Someone previously said:

Actually, it said the Atari stock-holders would own JTS, but the merged
: ompany would be named JTS... odd....

Well, I remember it being something involving "60% Atari shareholders"
but if that were the case, why would JTS' management run the new
company? Surely, 60% of the voting stock would be able to keep their own
people in place. Unless they're giving Atari shareholders preferred
stock in the new company but saving the voting rights for JTS.

The fact that Atari didn't seem to bother replacing its CEO (the CFO made
all of the statements for Atari) may suggest that Atari unfortunately
isn't going to be of much importance. Which is really a shame. Hell,
I'd take the job. :)

Let's face it, the Tramiels sold out and are putting their new found money
in the bank. I must admit, when they first came onboard way back when, I
thought they were going to do some good for Atari. It turns out that they
had no idea how to manage a company. All of the innovation that was
brought to this compnay was brought to them (Tramiels) by outside help.

Additionaly, I find that people are always worried about the perspective
that Atari brought to the marketplace. They seem to go on about peoples
perspectives of Atari as nothing more than a game machine. Remember, that
a vast majority of people either one had no interaction with Atari in
their 8 bit days, or two, are so young (25 and younger) that they are not
aware of the previous accomplishments of this great company. Just keep in
mind, that Atari will forever be known as a games company because of their
fantastic success in this market. This is nothing to be ashamed of from a
coporate point of view. Corporations are in bussiness to make money, any
way they can.

1104. Error 130 -- where's the 850 interface?

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-25 00:00:00 UTC
From: jlendino@panix.com
Message-ID: <jlendino-2502962050380001@jlendino.dialup.access.net>
Source record: 85679

A friend and I tried all day yesterday to hook up an 850 interface to an Atari computer. We wanted to try and call my ISP with it; but I couldn't even get the computer to find the interface. I tried Amodem and a few other comm programs, and we even tried copying a text file to R1:, but no matter what we did, we couldn't get it to find the 850. We always received an error 130, or an error 138 to the parallel port. Amodem would shut down and reboot; the other programs just gave the same error.

We put the 850 in different parts of the chain. we also tried two different 850's, two different Atari 800's and an Atari 800XL, to no avail. What simple fact are we missing here? I used to do this all the time to run a BBS back in the mid 80's. I feel like a fool!

Thanks for any help in advance.

Best,
Jamie

BobKlaas (bobkla19@mail.tcd.net) writes:

>Well, Copyright owners are readily available most are too lazy to
>look in the right place to find them. They can be found in the
>Library of Congress where the product is registered.

Do you consider it "too lazy" of me to not be financially CAPABLE of flying (or otherwise getting) to Washington, DC to visit the Library of Congress every time I want to obtain a piece of software? It is completely unFEASIBLE, at present, for "most" (people) to "look in the right place to find them." Make the information remotely accessible and I think "most" people would jump at the chance to look things up. I know I would!

We're all aware, I think, of laws which are "unenforceable" in practical terms; I submit that there are also laws which are largely "unfollowable" in practice. How many of us ad here to the laws, still on the books, which state that like, "an automobile must be preceded by a man on a horse waving a red flag, and must stop and ring a bell three times before proceeding through an intersection?" There are MANY laws which, while presumably necessary and a good idea at one time, have become unenforced, unenforceable, unfollowed and unfollowable, through changes in the nature of society over time. (Not even the President follows these laws, and you could suggest that he ought to be trying to set a good example for the citizenry.)

>What you were saying about changing the law is without merit.
>How would you like it if I came along and said I wanted your
>girlfriend or wife and took her just because I wanted her? You
>left he dormant for a while so therefore I want her..!! You
>don't like it so I'll get a group together and get the law
>changed so I can have her..??? Sounds good to me?

Actually, yes, you would be within your rights to organize such a group and TRY to get the law changed so that you could have her. Laws are supposed to represent "the will of the people," or rather, in practice, "the will of the majority of those people who bother to participate in the governmental process," and it just so happens that now and then "the people" change their collective minds. Sometimes the attitudes of the existing population change, sometimes the demographics shift so that a different "majority" gains influence. The downside of this is that under "majority rule," the MINORITY gets laws that they DON'T want, but that's the way it goes. They still have the right to TRY to get what they DO want. This system may have flaws, but it's better than just about anything else humans have ever invented and tried to live by.

Personally, I consider not only the letter of the law, but also the feasibility of adhering to it, and it is abundantly clear that most of the rest of the

population feels, and behaves, similarly, whether or not they could actually ARTICULATE their feelings and behaviors... For instance in many states certain sexual acts are illegal even between consenting spouses. Are you able to state that you've never even TRIED to get your spouse to perform any of those acts, JUST BECAUSE THEY'RE ILLEGAL? If you can, you're probably lying. You yourself do what YOU want to, when you feel that the law is unreasonable, as do we all. When enough actual VOTERS come to realize that they feel this way, they may very well act to change the laws to take this into account, whether or NOT *you* approve of it.

I think the suggestion of getting the copyright laws changed is a GOOD one; but I also feel that the existing state of copyright has been more "obstructive
"
than "protective," and that there is nothing wrong with coming to a compromise on the subject. To those hard-liners who insist on following the letter of the law, "right or wrong," I can only say that extremism in ANY form is a danger to society. It is JUST as bad,m in the long run, to unquestioningly obey ALL laws, as it would be to obey NONE of them. It is each citizen's moral responsibility to oppose those laws he considers unjust, and the current state of copyright law is starting to feel like such a case to a lot of us.

You turned that one arround pretty well, I like it..!!

But I am not the one leaving the girlfriend or wife dormant use the wife as she should be used. Along with the copyrights I own.

I realize what the users are saying, but had there been user investment in the product several years ago the problem they face today wouldn't even be discussed..

Several years ago, I attempted to get a Supra Hard Drive interface for the Atari 8bit, for a customer. Supra told me that I had to order 100 to get one made, this was from the sales person. Really ticked me off..called him back and put the question to him..how much for the Rights to the damn thing! Totaly., He couldn't answer so told him to go to whoever and find out. I ended up buying those rights from Supra. Have them now and do not feel that they should end up in P/D..we are still working on modifications for the interface. Have an add on board that will let the user select from a menu like the MIO/BB the drives he wishes to use..but, still have not felt comfortable releasing the program. We are also working on moving it totaly on a seperate upgrade to Scsi II only drives. It has taken me several years to get it this far (problems with flaky programers!) 99% of the problem. Lack of purchasing another problem so I do what I can with what I have to work with. I am at this point rather slow, have invested several years and several thousands of dollars into the project, an I as a Copyright owner should wish to see legislation to take those rights away from myself/my children, I don't think I would like it as well as my point on legislation related to girfriend/wife of another would like that much either.

The only reason not to do this is that of letigation. If an old software developer sees fit and wishes to push it the server could end up in court with substantial finincial losses.

I have about 300 original disks, some new in the box never ran have bought out complete stores when they went out of business and have attempted to sell some of the boxed software with all documentation without much success.

Vendor sales are very limited unless they happen to luck out and find a market we all missed. They are not at this point in time loosing much if anything. The only real drawback is the rights of the Copyright holder..

I have been working on contacting some for the purpose of placing their old Atari 8bit wares on CD, with compensation to them from each CD sold. They are still very reluctant to give any permission even with an open book/s option. So figure?

Bob

What 8 year mark? Copyrights last for 50 years after the death of the
author, or even longer if it's work for hire.

Of course, another way to get hard-disk storage on an XL is with an IBM-compatible computer and an SIO2PC cable. You could get a used XT for about the same price as an MIO, and if you're posting on Usenet, chances are you already have some sort of MSDOS computer.

As far as I know, no Atari devices actually used the clock in and clock out pins. If you run a communication program using an R-verter handler, you should have no difficulty talking to your microcontroller.

There is a RTTY decoder available, I used to have one running on my 65xe.
I typed in the basic prog from the back of one of the Atari manuals.
The hardware was simple and just had 1 (or 2) 556 pll chips.

If you're really keen I'll climb up into the attic and see what I can find.

Hi All,

A friend of mine just called with a desperate request. Seems he
needs to print out the listing of his former classmates which
he did on SynFile over 10 yeasrs ago. He lost his SynFile disk.
I have a "Happy Archived "copy of the SynFile program, but my
Happy 810 died on me, and I don't have the time to troubleshoot it.
I was wondering if anyone out there had a copy of SynFile that
they could send me, which I would forward to my friend. It would
save their Class Reunion party! Please e-mail me at:

aj445@po.cwru.edu or
cooncat@ncweb.com

TIA

Bill

>cartoons.

Well, not quite. The original music's copyright has expired, but any
recordings done are under copyright by the performers. So you can
copy anything you like, as long as all the performers died over 50
years ago. (The exact number of years may vary with country.)

The same thing with books, if I type in a Shakespeare play from a book
published in 1898 and put it on the net, no one can touch me. If I type
in a copy from an edition published last year and post it on the net the
publishers can have me for breakfast.

Assuming the switches are discrete components and can be replaced at will.
I don't know about the XL's but the XE's used a plastic sheet with
conductive traces printed on one side. The keys had a conductive rubberized
pad at the bottom which would make contact with the conductive traces.
After a while, the traces would crack and keys would stop working. We
repaired it using the paint used for fixing car defogger elements. But
after the nth time, I just built a new keyboard for it in a separate case
and attached it by ribbon cable. The best part was that I wired up keys
for the F1-F4 keys that were only on the 1200XL.

I was wondering if you could maybe confirm or refute a certain rumor? I've heard from a couple of sources that the early work that Atari did on cd rom publishing, was actually done on an 800xl. Note that this wasn't done to produce a product for the 800xl. It was done with the ST in mind. Supposedly the ST was still in development, and Atari wanted to get an early start on exploring the possibility of creating and marketing a cd rom for the ST. So they used the pbi on the 800xl to connect to some type of host adapter (Supra, perhaps?), and then connected the cd rom drive to it. This might have been in 84 or 85. Do you know of any such project? Thanks.

Brad,

Thanks for the response. This makes sense, though for some reason
I can't remember doing it. It's been a while.

So where do I get the driver for the 850? I have a one sector
AUTORUN.SYS on the disk with the Amodem program; could that be it?
Because it doesn't work even if I boot off that disk.

Best,
Jamie

Source record: 85625

James R. Lendino (jlendino@panix.com) writes:
:
: A friend and I tried all day yesterday to hook up an 850 interface
: to an Atari computer. We wanted to try and call my ISP with it;
: but I couldn't even get the computer to find the interface. I tried
: Amodem and a few other comm programs, and we even tried copying
: a text file to R1:, but no matter what we did, we couldn't get it
: to find the 850. We always received an error 130, or an error 138
: to the parallel port. Amodem would shut down and reboot; the other
: programs just gave the same error.

If you have a printer properly attached, you should have no problems
printing even without the 850 handler loaded.

If you can't print, and the 850 handler wont download when called by
BobTerm or a stand alone 850 loader program, the interface is not
working properly.

I believe the story behind this was that when the first version was
released, they got sued because the maze was too close to the original
Pac-Man maze. So they changed it around a bit on the later version. I
really couldn't tell ya which is which, other than the one that looks
more like the Pac-Man maze is probably the earlier version. :)

Hmmmm... wish I'd gotten those. The group a.b.w.a8 has already been
deleted by certain admins. It never went through the "strongly suggested"
phase of comment-collection in alt.config and it didn't include
a statement of purpose. Also, having the word "warez" in the newgroup
name kind of doomed it. At any rate, for these reasons, it is possible
that certain hosts are not propagating the contents of the group, which
would explain why those posts didn't get here and why mine hasn't made
it there.

I'm going to try going through more official channels to get a
group created (though the ALT hierarchy isn't supposed to *have* "official
channels"). I was thinking of simply ALT.BINARIES.ATARI.8BIT - any
suggestions?

ROTFL

It was a pretty poor analogy, true - especially considering
that it was never suggested that she became public domain
simply by not paying attention to her. I think one of the
stipulations was that the machines that run the particular
version of the software in question had to not be manufactured
for a certain amount of time (can't think of a suitable
situation that fits with the analogy...)

The keyclick is controled by the register that deals with the
select buttons. It is controled by the operating system that is in
ROM. You can poke a location to produce the click but not to disable
it. I am sure that there is a good reason that you don't like the
click, but the biggest objection to the later units that came out was
that there was no keyboard feedback.

>outta spare parts lying around....

A buddy in my user group made one and let me borrow it. It was a lot of fun to fool around with. The WEFAX signal could come from any source, of course. It would be neat to get it "right off the bird", but the easiest way (and only way I could) is to get it off shortwave. The gov't rebroadcasts the satellite images at a bunch of frequencies. It was quite easy to learn the audio signature of those signals, especially if it was weather maps (the scan of all the vertical longitute lines makes a distincitve, repetative sound). The setup would have been able to get any image so transmitted, and I was anxious to try to get news agency telephotos. I never found any, so I figured that by that time they had all switched to direct satellite transmission or to the FM bands. There was a faint signal transmitting what appeared to be a Japanese newspaper. The program provided was very adjustable in its parameters for scan speed, and I was able to use it to get slow-scan TV images from the ham band specializing in that, although the scan wasn't perfectly synched and the pictures came out as trapezoids.

Be aware that there was a similar-sized project that came out about the same time for making a Morse code decoder. It was a much simpler and cheaper circuit (about $5, vs. about $25 for the WEFAX). I built it and played with it as well. The Morse code circuit can be used with the WEFAX program, but does a lousy job (it lacked any frequency sensitivity, being only sensitive to audio level).

I always wished that someone had gone a bit further with these, like doing a multiple gray-level FAX circuit/program or doing a RTTY decoder program for the Morse circuit.

A group of four of us took a business trip to NY to meet with guys at that office (15 paychecks, no people). It was Steve what-his-name-from-grass-valley's operation. We spent an entire week at a hotel where Warner was paying the room bills. We went to plays, dinners, hired cars and lots of other stuff - all charged to the room. No expense accounting required. We did meet with Steve one afternoon when he decided to come into the office. He lived a few hours out in the burbs and did not like to come into the office.

Then there was the 'executive' lunch room at Atari. What a setup! World class chef.

How about those bonuses given to the Falcon group! Tens of thousands of dollars per person for not knowing how to make a telephone.

Then was the fiasco that started Activision. Ray promised the 2600 programmers a bonus if (and only if) Atari made a profit that year. Ray then ordered zillions of 2600s produced for the Xmas season, but not in time to sell for Xmas. Atari did not make a profit 'that year' but sold all of those 2600s by the end of January. Sorry guys, no bonus. Three or four of the better 2600 programmers decided to form their own company. And that was the begining of the end of Atari.

Cheers,
Paul

Last year I got myself a Sega Mega Drive/Genesis and was happy with a lot
of the innovation going on in the games. Unfortunately, innovation isn't the
norm on the game consoles; a lot use graphics/sound to be the main thrust
of the game and that's it. There are some really great pieces of software
out there but improved hardware performance has become a liability: there
is too much emphasis on presentation design and the gameplay has been
lost. "Gameplay? I'm sure we've got a little bit behind the stores at
the back if you *really* want it..."

>he heh... that would would be cool! (Beavis voice)
>
>> Long live the 8 bit and the members

Let me add that I got hold of a new 2600 a couple of years ago: it was my
first choice before the Sega console.

>FWIW, though, there are some people currently making games who seem to
>care about play value as well as graphics. I just bought a 10-pack of CDs

>been playing Syndicate and Theme Park like mad. I wish those had come out
>for the 8-bit 10 years ago (with simpler graphics of course, but the game
>mechanics could have been pretty much the same...)

Bullfrog are doing some good work on the gameplay front. Some of the
games I find hard to put down on my Sega console are Sonic (the gameplay
is just so effortless and responsive), Mega Bomberman (could easily be
done on the 8-bit Atari), Earthworm Jim (can't decide whether it's the
graphics that do it) and Red Zone (I love this game).

The "next generation" consoles are out now but basically a lot of it seems to be better graphics/sound to me. I'm sure there are going to be some great games on them, but I'll doubt I'll see an Alternate Reality for quite a while.

1134. SIO Question

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-26 00:00:00 UTC
From: bluesky@singnet.com.sg
Message-ID: <31316b7d.502838@news.singnet.com.sg>
Source record: 85687

I'm trying to interface a microcontroller with the Atari SIO port
using a UART.

My question is whether the Atari (800XL here) needs a clock in at the
SIO port (pin 1 of the connector) in order to read in the serial data
(which is at 19,200 bps).

Thanks.

Ben

1135. Special Announcement

```
ATARI 8-BIT SUPPORT FROM RICHARD GORE
-------------------------------------
SPECIAL ANNOUNCEMENT

As of 15th March 1996 I will no longer have access to e-mail, I will
continue to support the Atari 8-bit machines but any correspondance
will have to be done by letter or telephone. Below is a list of my
current range of 8-bit products, if you want any details by e-mail
this could be your last chance.......

My list of software for sale has now got quite long, so to save space
and bandwidth I will just give a list of what I have got along with
their prices, then if you need any further information you can simply
e-mail me at chmrig@leeds.ac.uk and I will supply the information.

My range of commercial software:-

JAWBREAKER #2.99 ($7) disk only 16k
MOUSEKATTACK #2.99 ($7) disk only 48k
ARENA #2.99 ($7) disk only 64k XL/XE
BUBBLE ZONE #2.99 ($7) disk only 64k XL/XE
SUPER PRINT-LAB XE #6.50 ($15) disk only 128k XL/XE
GTRACKER #6.50 ($15) disk only 64k XL/XE
GTRACKER XL UTILS #6.00 ($13) disk only 64k XL/XE
CLIP TRACKER XE #6.50 ($15) disk only 128k+ XL/XE
BLACK LAMP #4.95 ($11) disk only 64k XL/XE
TUBE BADDIES #4.95 ($11) disk only 64k XL/XE

Special offer (1); buy both Jawbreaker & Mousekattack in one pack for
^^^^^^^^^^^^^^^^^ only #5 ($11).

Special offer (2); buy both Arena & Bubble Zone for only #5 ($11).
^^^^^^^^^^^^^^^^^
Special offer (3); buy both Tube Baddies & Black Lamp on one disk for
^^^^^^^^^^^^^^^^^ only #9.50 ($20).

Special offer (4); buy GTracker and GTracker XL utilities for only
^^^^^^^^^^^^^^^^^ #10 ($21).

Special offer (5); buy all 3 'TRACKER' programs, as offer (3) plus
^^^^^^^^^^^^^^^^^ CLIP TRACKER XE for only #15 ($30).

Ex-stock, shrink wrapped commercial software. Limited stocks. You are
advised to check stock levels before ordering:-

Disks: SUMMERGAMES #5.00 ($10)
----- SOLAR STAR #5.00 ($10) also known as Sun Star.
```

ONE OF EACH ONLY: DROPZONE (disk) #5.00 ($11)
---------- GAUNTLET DEEP'(disk) #2.00 ($5)

Prices in UK pounds (#) include p&p to UK, overseas add #2 for p&p,
payable in pounds sterling or UK cheques, IMO, Postal Orders.
Prices in US dollars ($) include shipping to USA, but payment must be
in US$ cash, sorry no cheques (checks).

For further information or to order contact RICHARD GORE at

79 SPROTBROUGH ROAD, SPROTBROUGH, DONCASTER, DN5 8BW, ENGLAND

Tel. no. (01302) 784642

E-mail: chmrig@leeds.ac.uk (before 15th March 1996)

1136. A replacement keyboard for an Atari 800XL

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-26 00:00:00 UTC
From: Roamer@ix.netcom.com
Message-ID: <4gsnpa$54@ixnews2.ix.netcom.com>
Source record: 85689

Hi,

Anyone know where I can get 2 replacement keyboards for an Atari 800XL computer. I have two different ones that
have failing keyboards. One has keys 1 through 9 not useable at times, and the other has the key "W" permenantely
stuck down.

I would like to buy two new keyboards, refurbished, or whatever.

Thanks,

Stephen Buechler

1137. Charley Kormos

Except that no law says that your wife becomes public domain after a
certain period of time. Copyright law already does that. Most classical
music is beyond copyright protection-- which is why it is so often used in
cartoons.

I was just suggesting that we reconsider the appropriate period of time that
copyrights should last.

Copyright is not some natural law that the majority of voters cannot or
should not infringe upon.

Bad analogy.

1141. The Undying Copyrights Issue... (LONG)

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-26 00:00:00 UTC
From: JTKIRK@urp.edu.pe
Message-ID: <m0tr8K6-000OZMC@rcp.net.pe>
Source record: 85694

Well, basically, the thing is:
-try to convince the copyright holders to release their copyrights on software which is now unavailable from the stores (and only for non-profit purposes)
or:
-have them start selling new copies of their copyrighted software (THEY should be able to make all the copies they wanted, I think)

There's many software which I never could get and would like to get... but if nobody is currently selling copies of it, which alternative would you suggest?

1142. CardPack

-stirre31@maine.maine.edu

1145. little blue-box

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-26 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <31326637@pianosa.demon.co.uk>
Source record: 85698

Whilst reading the usual rubbish I find here, Gary Holder wrote something
interesting to All about little blue-box:

Hello Gary,

GH> I always wished that someone had gone a bit further with these, like
GH> doing a multiple gray-level FAX circuit/program or doing a RTTY decoder
GH> program for the Morse circuit.

Some years ago, here in the UK, Maplins (a company similar to Radio Shack) used
to sell a WEFAX decoder kit. Sadly, they no longer produce such a beast. It
should be possible to obtain the relevant info, from one of their magazines,
but due to the (relative) complexity of the kit, building it *without* their
PCB, but using prototyping board, would be tedious in the extreme. Which is a
pity really, because it would've been rather fun.

Whilst reading the usual rubbish I find here, James R. Lendino wrote something interesting to All about Error 130 -- where's the 850 interface?:

Hello James,

JRL> We put the 850 in different parts of the chain. we also tried two
JRL> different 850's, two different Atari 800's and an Atari 800XL, to no
JRL> avail. What simple fact are we missing here? I used to do this all
JRL> the time to run a BBS back in the mid 80's. I feel like a fool!

It shouldn't make any difference wher the 850 is connected in the chain.

Remember to turn on the 850 *before* the computer. Also, you need to load the device driver for R: from disk. This is usually done as an AUTORUN.SYS load, which explains why you have to turn on the 850 first. Unless you do, the R: device loader can't find the 850!

Some software loads the R: handler for you, though. You'll know when the R: handler has been loaded, because a high tone is sent to the monitor's audio output.

So, make sure the volume is turned up on your monitor. :-)

Why buy two? Surely one would do. If you cannibalize the one with the U/S
numeric keys, to repair the one with the broken W.

At least you can fix one at little or no cost, other than time.

First, NO IDE. At least not until the MIO II is released.
Second, you will need to find a Black Box, MIO or a SUPRA
Hard Disk Controler. Bob Klass has the rights and sells the SUPRA, if
you hang around here long enough he will speak up. I wonder if he
doesn't sell a 8 Bit HD setup ready to plug in and go.

For the non-technician it isn't simple, and, you must use
MYDOS or SpartaDOS, both are now Shareware. Didn't the FAQ's
give names and addresses of the companys that sell the Black Box,
MIO or SUPRA interfaces? Or are you looking for a dirt cheap one,
used? The last I saw 256K MIO's were going for $75 to $100 used.
Haven't seen a 1Meg version for sale. Haven't seen a Black Box or
SUPRA for a long time either.

Was the file "RS232.COM" on the Boot Diskette?
Also, I hope you were not pluging in and unplugging
the 850 on the SIO with power on. If so, you probably have some
bad LM3068's in the 850's. I don't remember which one handles
the SIO interface as there are 5 of them used in the 850.

;Yeah!!! I know! So, damnit, SOMEBODY DO IT!!! <cry cry cry sob sob
;sob!>
A long long time ago when ICD offered their 8 bit line, I made an offer on the Action! language. ICD wanted to sell everything in a lump & AFAIK FTE was the only serious bidder (Rumor has it that some offers were on the level of give me everything for free & I'll do *but* I haven't confirmed that. 8 Bitters have got to be the CHEAPEST computer users in the WORLD<g>!). When FTE was in Scott's Valley I offered to revise the language to get rid of a few bugs, a few annoying defaults, whatever. At the time, Mike had already given the project to someone. What seems to be years later, we've yet to see a really updated version of Action!. I don't really blame it on Mike, he just trusted the wrong programmer. Mike had other stuff he wanted me to do that I wasn't interested in. Ended up doing a lot of my silly hacks like the 6551 in a cart, DAC, SIO2PC hacks, clock speed up, etcetera so it wasn't exactly like the experience inhibited me. As far as 65816 code support goes, it's really easy to do it from the Action! language itself. My problem with doing it is I have never run across a book on 65816 assembly language programming & I don't have a 65816<g>. For that matter, none of the local distributers I talk to even know there is such a thing as 65816! Anyway, let's say I gave you Action! code blocks for things like fills, clearing a block of memory, maybe integer math, would it really help? Even if I had an '816, I don't think I would use '816 code for anything. Just aren't enough people that have them. For that matter, on occasion I've even thought about adding things like N dimensional arrays to Action!, but I haven't got an application that could use it so...

1154. The Undying Copyrights Issue... (LONG)

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-27 00:00:00 UTC
From: ricortes@Garg.Campbell.CA.US
Message-ID: <NDwyJD1w165w@Garg.Campbell.CA.US>
Source record: 85507

You know, I'm not up for slamming you guys for talking about an FTP site for Copyrighted programs, but you should think about medium you are proposing, the Internet, to use.
i.e. Formula I drivers may be talented drivers without knowing how to tune their cars.
On the most basic level, the Internet was set up by the government. Wait a second! Could this be the same government that grants Copyrights? BINGO! For the most part, the backbone of the Net is still run on either government sponsered or indirectly funded facilities i.e. .edu sites. "OK" you may say, "but I have a private .com site." But where do you think they get their feeds from? Simply put, even if you find a site where you can put up the illegal material, as soon as it is brought to the attention of one of these feeder sysadmins, they well threaten to cut the feed & the local sysadmin will buckle. Most of all, before you try to do anything, check with your local sysadmin! Make sure they know the exact nature of what you are proposing to do with the site. IMO: If you are a student, just forget it. Most of the grad students running around these sites are anal retentive future employees of IBM or MicroSoft types. Believe me, these guys have no qualms about enforcing the Copyright laws. I think they put how many people they get kicked off the school computers for infractions on their resu'me<g>. There's a good chance you well have your Internet access terminated. The only exception to this seems to be foreign countries that don't enforce US Copyright laws.

1155. ack! help! both of my 1050's are on the fritz!

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-27 00:00:00 UTC
From: cyrus <cyrus@lagrange.amd.com>
Message-ID: <31334C0B.24E9@lagrange.amd.com>
Source record: 85508

My second, and last 1050 partially died last night and I need your help!
I think the problem lies in two places...the US Doubler chip and the
on-board power circuitry. The drive had a US Doubler installed and was
working beautifully. Then all of the sudden, all I got from the drive
is that annoying bzzzzzt sound when I tried to boot off of it - it would
not even spin. (It does spin for a few seconds after inserting a disk
and closing the latch). I also noticed the drive case was very warm.
So, I took it apart and started exchanging the chips under the metal
shield (I have another 1050 that I exchanged chips with). When I got to
the USDoubler chips and replaced those, I saw some improvement in the
drive, but not much. At least the drive would respond to a boot request
from my 130xe. I got the normal BEEPs, but at a very slow rate, as if
the drive had trouble reading the disk - but I know the disk was fine (I
tried several). The heat sink was scorching hot, so I think there may
be a problem with the power supply/voltage regulators, I just don't know
enought about the circuitry to debug the problem.

So, now I have 2 disk drives, both useless to me, unless someone can
help me fix them! I am dead in the water. HELP!

Anyone know where I can get the USDoubler chips...i'm going to need
these to read all my double density disks...

Cyrus

Whilst reading the usual rubbish I find here, James R. Lendino wrote something
interesting to All about Error 130 -- where's the 850 interface?:

Hello James,

JRL> So where do I get the driver for the 850? I have a one sector

If you haven't got the driver from the original DOS disks, you'll have to leech
it from somewhere. If you run SpartaDOS, that has it's own RS232 handler
included.

It actually isn't immediately obvious where the RS232 handler is, on a DOS 2.5
disk. If you've still got the Master (i.e. *original*) Disk, run from DOS
option L SETUP.COM, which will set up an RS232 autoloader.

JRL> AUTORUN.SYS on the disk with the Amodem program; could that be it?

I think one sector is too small for it to include the handler. Chances are
that the AUTORUN.SYS runs AMODEM, early versions of which are written in BASIC.

JRL> Because it doesn't work even if I boot off that disk.

Yep, sounds like it's missing. :-(

interesting to All about little blue-box:

Hello Gary,

>> Some years ago, here in the UK, Maplins (a company similar to Radio
>> Shack) used to sell a WEFAX decoder kit. Sadly, they no longer produce
GH> You might look up the referenced ANALOG (or was it Antic?). The circuit

The article was in ANTIC, rather than ANALOG, I think. I used to get ANALOG,
but can't find the relevant article.

Having gone through the Maplins magazine, I discovered that the unit they sold
as a kit was, in fact, a full-blown RTTY decoder, not just WEFAX, hence the
cost & complexity. It stuck in my mind because the software (BASIC) listing
they gave for use with it, was written in ATARI BASIC. Something that was
relatively uncommon in the UK. :-(

I just lurve ROF!

The first time one of the aliens jumped out on me, I nearly had a heart attack and fell off my chair ...

My bedroom light was dimmed, my TV volume on high and I had decided to have a laugh by gassing a 'pilot'. Heck ... nearly cost me my life for real :-)

I still get jittery when I play the game.

BTW: Anyone know why the cassette version of ROF plays better and faster than either the disk or ROM versions? The skill level appears to be set higher. Why is this? Are there fewer than 99 levels on the cassette version? (The highest level I reached on the cassette version was around 52 ... Reached level 68 on the ROM version).

Message-ID: <4h043b$367$1@mhafn.production.compuserve.com>
Source record: 85515

Just want to rattle off a couple of quick notes ...

First, as Joel Goodwin mentioned in a previous post, the SEGA game 'Mega Bomberman' would be easy enough to write for the 8-bit (actually, I know it as an ST/Amiga game called Dynablasters).

THE GOOD NEWS: I have started on such a game and even have a joystick port doubler to enable up to four player simultaneous action on a standard XL/XE.

THE BAD NEWS: I haven't been able to do anything with it since last November/December. At the moment, I have some fade in/out routines plus the screen drawing routines (totally random - never the same game twice). However, I could do with some help on the graphics so if there are any artists out there, get in touch.

The second note is in reply to Bill Kendrick's note on a DOOM engine ...

Bill, yes there is a DOOM engine under development. Some Polish guy is working on it I think but is having one or two teething problems. I have been asked to try and locate some DOOM source code to help him out with but I don't think there is any ... or is there? Anyway, it'd be cool to get a version for ADOS? :-)

John Harris (jharris@sierranet.net) wrote:

: There are actually _three_ versions of Jawbreaker that got shipped by
: On-Line Systems, but one of those was an accident.

: The first version was the one with the single wrap tunnel, which was a copy
: of the original Pac-Man maze. On-Line got sued by Atari for copyright
: infringement, and one of the defense strategies was to show that there was
: a game prior to Pac-Man that had a similar gameplay of "eat the dots in a
: maze while avoiding computer-controlled bad guys". If you remember a game
: called "Head-On", which had a car driving around concentric rectangular
: tracks with places to change 'lanes', it does fit that description. I had
: actually programmed a version of Head-On awhile before I did Jawbreaker,
: and what we decided to do, was to create a special Jawbreaker version that
: looked somewhat like the rectangular Head-On layout, in an effort to show a
: product that theoretically looked like it could be in-between Head-On and
: Pac-Man, as opposed to post-Pac-Man. Someone at On-Line liked the dual
: wrap tunnels, and decided to ship this game even though it was only meant
: as a court prop. This version did not play very well, because the happy
: faces tended to get stuck in one 'lane' and would just keep going round and
: round. On-Line got complaints about it, but also got publicity about a new
: version that had dual wrap tunnels, and so I decided to make a "real" new
: version with an original maze layout and two tunnels. The result was the
: final version of the product that was shipped.

: So in summary, there are three versions, and although they are all
: technically "real", only versions 1 and 3 were supposed to be shipped.

: 1. Original Pac-Man maze with one wrap tunnel.
: 2. Very rectangular-looking maze and two wrap tunnels. This version won't
: have any passageways that twist and turn in different directions.
: 3. Two wrap tunnels, with an original maze layout more in the style of the
: original version.

John,
Thanks for the input. I thought the story in "Hackers" was
interesting, but this adds yet some more depth to the story. It's wild to
listen to the history behind some of your favorite games. Thanks again.

I have a collection of Atari equipment from my "old" days for sale. The list includes:
2-Atari 800 computers and power supplies
2-Atari 1050 disk drives, cables and power supplies
1-Atari 810 disk drive, cables and power supply
1-Atari 850 I/O box, cables and power supply
1-300 baud modem, cables
1-Star Gemini 10x printer & cables
3-new ribbions
Atari manuals and third party manuals
Almost complete collection of Atari Antic and Analog magazines
Computer club documentation-MACE (Michigan Atari chapter)
Two hundred + 5 1/4 disks full with anything and everything
Game Cartridges-Pac-Man, Ms Pac-Man, Journey to the Planets, Return of the Jedi, Squish-em, Buck Rogers, Pitfall, Pilot programming, Alien Garden.

Make offer: Will sell as bundle. Can be reached at:

You might look up the referenced ANALOG (or was it Antic?). The
circuit was easy and easy to breadboard. It was just a bit steep for
my pocketbook at the time ($25, sad, isn't it?). It was centered on a
$10 or $15 chip, as I recall, which did all the work. the rest looked
to be some filtering to provide the frequency sensitivity (several
caps, etc.). I assume that any fax signal would have produced
interesting results. The only trick would be how to trigger a fax
machine to send and how to synch the display program. Of course, a
single grey level (as it was) might get frustrating pretty soon in
practice.

Nowadays, the thing to do would be to work on fully implementing the
fax capabilities of all those fax modems out there.

I would love to see it. I've got a nearly complete set of manuals
(including Tech. Ref. Notes), so perhaps I have it (in the basement in
my case). The circuit I have pulses the trigger port and clearly has a
response time able to resolve RTTY (it takes a pretty strong Morse
signal to "debounce" the edges of the pulses adequately). I am
surprised that Basic could handle it, as my understanding is that it
is a Baudot code (5 bit?), and I imagined it would take machine
language to handle decoding it on the fly.

Agreed, but we're still in the stage of getting people to agree that this
a good and worthwhile thing to do. Getting someone to put up the goods
for an FTP site will be tough. I would do it myself if I had the
resources. I *may* be able to set-up a site that would be accessible
evenings/weekends, but I'm not even sure about that (and it has nothing
to do with fear of prosecution - I just don't have a full-time internet
link-up). If anyone is willing to set aside some drive space (and bandwidth),
please let us know - it wouldn't take much of either. (I wonder if the
admins of one of the C64 sites would be willing... nah...)

I originally started this message as a reply to one of
Bob Klaas's posts under "The Undying Copyrights Issue...",
but it seemed more appropriate and useful to start a new
thread, so here goes...

Here's an idea: Why not start a community group dedicated to
"freeing ancient software"? If we assume that the main reason
why copyright owners are reluctant (read: "unwilling") to make
their software freely available is simple lack of information
(as good an assumption as any), then maybe making some
information readily availabe in an official manner will
help release much of these trapped goods. The information I'm
talking about is the following:

* Users of orphaned computer systems (mostly collectors) still
have an interest in software that is no longer supported
nor commercially available.

* Though such user bases are typically too small to support
software distributed through standard retail channels, making
the software freely available will likely have the following
positive effects: Interest may be generated for revisions or
entirely new versions of the software either on the same or a
currently-supported hardware platform; Excellent PR for the
company/individual holding the copyright. (I know we mentioned
other reasons, but I'm too tired to think of them at the
moment...)

* Software may be made freely available without giving-up the
copyright or putting it in the public domain.

Anyway, you get the picture. Any comments? If we wrote-up some
documentation of this sort, we could then present it to the
copyright owners of our favorite ancient software and maybe
even get a response or two! =) Such an organisation could
serve as a headquarters for this kind of activity, and I'm quite
sure we'd have the cooperation of other orphaned system owners.

I don't know, maybe it's a bit too early in the morning for
me to be typing...

>The only reason not to do this is that of letigation.

Well, that and the other reasons we've already stated, but
yes, this is the one that brings the greatest personal
risk to the individual or individuals who decide to do
"free the software" in the manner we're discussing.

It seems there are enough of us who consider this to
be a relatively small risk in the face of the larger
rewards of having new ways to enjoy our hobby (Atari Historical
Hardware, that is...) Personally, I'm counting on no one
caring enough to sue anyone over this sort of thing
(seeing as how it happens all the time). However, should
someone take notice, I'm also counting on them giving
us fair warning before taking such drastic action.

>I have about 300 original disks, some new in the box never ran
>have bought out complete stores when they went out of business
>and have attempted to sell some of the boxed software with all
>documentation without much success.

Wow - maybe you should post a list of your holdings to this
group. If it's all Atari 8bit stuff, I know there would be
some interest (at least *I* would be interested...)

>I have been working on contacting some for the purpose of placing
>their old Atari 8bit wares on CD, with compensation to them from
>each CD sold.

I applaud your efforts. The problem with this, though, is that you
end-up giving everyone a piece of a very small pie. In order for
the project to be financially feasible, you'd have to sell many
units, or sell a few at a high price. I think I would go with
trying to make a non-for-profit CD (just cover your costs) and
see if you don't get more people to release their software for free.

>They are still very reluctant to give any
>permission even with an open book/s option. So figure?

Exactly what we're discussing here. Why is it that copyright owners
are so reluctant to make their no longer profitable software freely
available (without losing the copyright or placing the software
in the public domain)? So far, no one has presented a reasonable
answer (other than unreasonable greed).

Please see my post "Free The Software".

>.. I ended up buying those rights from Supra. Have them now
>and do not feel that they should end up in P/D..we are still
>working on modifications for the interface.

I didn't know you owned the rights to the Supra device.
There are other examples of this sort of thing, of course:
FTe would be one. Does anyone know how much they paid for
the ICD/OSS stuff?

>We are also working on moving it totaly
>on a seperate upgrade to Scsi II only drives. It has taken me
>several years to get it this far...

The most important point here is that that no one is
advocating taking anyone's rights away when those people are
actively working on or supporting their product.

Now, if you were to leave your interface unsupported for years,
and it was no longer possible to obtain it from any dealer,
then we, as the community of users to which you once sold
your product, may want to have a legal course of action
by which we could make your product freely available. This might
mean that we would have to go through some legal course of action,
and assuming certain conditions were met (one of which would probably
be that you could show no intent of supporting the product for our
community again), then we would have access to the product. (Of
course, in your example this doesn't help us much since you're talking
about hardware, and then we'd all have to go out and build our own
interface.) However, the copyright would still be yours, and
no one could sell your product or repackage it as their own.

Please remember that this is all EXTREMELY hypothetical. If we
really were going to go through the process of trying to create
new legislation that would allow anything even remotely like this,
we would have to iron out a great many details. I'm sure it
would take a good many years to get something of this sort done,
and by the time all the proper legal channels were traversed,
we would probably have a totally useless piece of law (ie. something
with such a limited scope as to make it powerless).

Rest assured, I don't think our copyright laws will be getting
any weaker within our lifetimes (they've been getting more and
more stifling throughout history - especially recently), and until
then, everything we're talking about is still quite illegal. =|

>... so I do what I can with what I have to work with. I am
>at this point rather slow, have invested several years and
>several thousands of dollars into the project, an I as a
>Copyright owner should wish to see legislation to take those
>rights away from myself/my children, I don't think I would like
>it as well as my point on legislation related to girfriend/wife
>of another would like that much either.

About your interface: I can understand doing this as a hobby, but
do you expect to make any significant income out of this? Don't
get me wrong, I strongly support and encourage anyone
developing hardware or software for the Atari 8bit, but realistically
speaking, it must always be a labor of love. In other words -
I hope you're not planning on sending your kids to college on
the Supra earnings...

Source record: 85641

I just used double density disks. If your 1050 is capable
of writing DD disks and your PC got a 5.25 drive
then copy all the atari software on DD disks and use a software
like ATARIO. For further information please read the Atari 8-Bit
Computers FAQ.
There are lots of possibilities for getting atari stuff to the PC.

Bye, Sven.

1179. Re: Interested in Chimera or Universal Hero Solution ?

Newsgroup: comp.sys.atari.8bit

Hello !

Did you get the solution ? I posted it some days ago but I can't find it
here anymore. So I post it again in case you missed it.

```
----------------------------
-./'-[ Solution for Universal Hero ]-./'-
----------------------------

Level I
-----------------------------------------------------------------------
-go to C1 and take TAP
-use TAP in room H1, now open pipe is closed
-go down to H3 and take the THREE PIN PLUG
-in room H4 take a TWO CORE WIRE
-go now to G2 and grab the REMOTE SWITCH
-go on to room F2 and pick up the A.S.C. I.D. CARD
-in room D2 you take the PLUNGER
-go to room C2, use the REMOTE SWITCH and take the FLOPPY DISC
-drop REMOTE SWITCH
-now go to B4 and get the DYNAMITE STICK
-in C3 use the PLUNGER, TWO CORE WIRE and DYNAMITE
explode and remove the stones
-go on in room E3 and use the THREE PIN PLUG on the computer
-now use FLOPPY DISC too, code is demanded
-type in ASC, identify is correct
-force field on the right side opens, leave the room at the
right side and go on to room G3
-pick up SOME CRUDE OIL
-go with SOME CRUDE OIL to C4 and use it there
-take the produced SPACE SHIP FUEL
-now go to the Space Ship in H4
-check, that you have the A.S.C. I.D. CARD in the inventory,
drop the PLUNGER here
-use SPACE SHIP FUEL, you fly to level II

Level II
-----------------------------------------------------------------------
-drop SPACE SHIP FUEL and A.S.C. I.D. CARD at B1
-in C1 you take the AIR TANK and use it immediately
-in E3 pick up a FLY SWATTER, in B2 you take the POTTING SHED KEY
-use FLY SWATTER in H2, grab now the DEAD COCKROACH and drop
FLY SWATTER
-in D1 use the DEAD COCKROACH -> you feed the plants
-go on to E1 and take WATERCAN
```

-use POTTING SHED KEY in E1 -> the door opens, drop POTTING
SHED KEY here
-in F1 pick up some WEED KILLER and use the WATERING CAN in G1,
then take the PRETTY PINK FLOWER
-in H1 you use WEED KILLER and so you kill the plants
-now take the RUBBER BOOTS in H1
-from G4 you take a MIRROR, in D2 grab a DROID RECALL DEVICE,
and in D3 pick up REPAIR DROID
-use the DROID RECALL DEVICE in E4, droid at LEADER RADIATION
BOX in level I / room E1 disappears
-from C4 you get the SPANNER and in A3 use the MIRROR
-now use the SPANNER in B3, then use the REPAIR DROID and drop both
-in F4 take a TEN PENCE PIECE, in E2 pick up the PASSPORT
-use the TEN PENCE PIECE at the telescope in A2
-go now to B1, take the A.S.C. ID CARD and SPACE SHIP FUEL,
look, that you have RUBBER BOOTS and PASSPORT in the inventory,
drop PRETTY PINK FLOWER here
-use at B1 the PASSPORT -> fly back to level I/ room H4

Level I

-go to F1 and take the ROUGH GLASS
-at E1 you grab the LEADER RADIATION BOX
-at A2 pick up a PIECE OF PLUTONIUM, no death,
because you have a LEADER RADIATION BOX and RUBBER BOOTS
-go back to H4 and use the SPACE SHIP FUEL -> fly back
to level II / room B1 over room A1

Level II

-drop A.S.C. ID CARD, SPACE SHIP FUEL and PASSPORT at B1
-take PRETTY PINK FLOWER
-use in D4 the ROUGH GLASS, you produce a LENS, take LENS
-pick up the STARTING HANDLE in H3 and the CURIOSITY from G3
-use the LENS in A3
-go to A4 and place yourself in the machine, use the STARTING HANDLE
-beam to level III / room A1

Level III

-drop STARTING HANDLE at A1
-take PIPE in C1 and ROPE in E1
-pick up the KNIFE in H3 and LARGE ROCK in H4
-at G4 use the KNIFE, you tie LARGE ROCK with ROPE
on the tree and use this as a catapult,
the LARGE ROCK flies to F4 and slays the plant
-go to F4 and through the entry to E4
-in E4 you take the BENT KEY
-go on to F7 and drop the PRETTY PINK FLOWER, CURIOSITY and KNIFE
-in F7 pick up the SLEDGE HAMMER, get a DIAMOND in G6 and
SOME AXLE GREASE in H5

-use a SLEDGE HAMMER at H7, you produce a STRAIGHT KEY
-take the STRAIGHT KEY in H7
-get a WATER PUMP in E8
-in G8 use the WATER PUMP (you must have the PIPE)
-the water is pumped to F8, drop WATER PUMP and PIPE
in G8, pick up BABBLING FISH
-go on to H8 and take the BRAKE LEVER
-go back to F8, leave the room as a 'fly' upwards
and don't touch the water
-go to E8, place the cursor in the inventory on the STRAIGHT KEY
-fall down before the rock and run fast to the left and reach
the exit
-use the STRAIGHT KEY if you are under the exit sign
(need fast reaction)
-now you are at the carriage in D8
-drop here SOME AXLE GREASE and use the BRAKE LEVER
-the carriage rolls on and breaks the walls, it goes with you to B8
-in B8 drop BRAKE LEVER, SLEDGE HAMMER and STRAIGHT KEY
-in C7 pick up the PENTACLE
-grab a RUBY in B3 and a CRYSTAL in A2
-in E2 you take a TALISMAN
-at A4 drop the BABBLING FISH
-go now to D4 and get the RING
-in D7 jump on the teleporter and use your TALISMAN
-you are beamed to E6, drop RUBBER BOOTS there and take the ORB
-use the RING at E6, beam to G7
-from G7 go to H8 and jump on the teleporter, you lost the ORB and
are beamed to level II / room E2

Level II

-go to room G4
-use RUBY
-YOU PREVENTED A DESASTER.

----END OF GAME----

Question:
Do you really need PRETTY PINK FLOWER, RUBY, CRYSTAL, PENTACLE,
CURIOSITY and BABBLING FISH ?

Annotation:
I changed some code of Universal Hero so that I had unlimited
time and air/energy. So I DID NOT try to solve this game with
limited time and air/energy. Maybe you must optimize the ways
you go.
Furthermore I changed some code of the title screen in a way
that after a key in the title screen of the game is pressed
a new room beside the room before is displayed.
(The rooms are numbered from 00 to 7F, this gives 128 rooms.)
So I was able to draw easy a map of the whole game.

There must be 12V between pins TP14 and TP15 and 5V between TP13 and TP15.
I remember often died the diodes CR15 and/or CR16.

If you have any questions, ask! I have the complete service manuals... ;-)

I have a good reason: It's annoying!
I don't want to hear my keyboard, I want to feel it.

I've always felt lucky that I used a 1200xl -- cntrl-F3 disables the
click, without having to go to basic and do any pokes to 731.
And the 1200xl's keyboard bottoms out firmly, which is enough feedback
for me.

All this talk about Jaggi Lines caused me to pull out the disk it was on and play it for a bit. Also on the disk was Pastfinder. A very well-done game with lots of colour and neat graphics. But, what is the purpose of this Pastfinder game? I almost make it to the top of the screen(what I assume is the end) but usually croak off before hand. Is there any use for the BeamShield? Scrambler? and that other piece of equipment that I forget its name? The Deradiator is pretty obvious. Thanks,
randy.

readings

The STM1 Mouse works as an inverted trackball (which is, in fact, what it is). The left button corresponds to the joystick trigger; the right button must be read in more or less the same way as the keyboard controllers, I guess (I had to return the mouse I borrowed before finishing my analysis).

Mouse rolling forwards (up) Mouse rolling backwards (down)

U/D U/D U/D U/D
REF SNS REF SNS
------- -------
0 1 0 0
1 1 <-\ 1 0 <-\
1 0 | 1 1 |
0 0 | 0 1 |
0 1 --/ 0 0 --/
... ...

Mouse rolling left Mouse rolling right

REF SNS REF SNS
------- -------
0 1 0 0
1 1 <-\ 1 0 <-\
1 0 | 1 1 |
0 0 | 0 1 |
0 1 --/ 0 0 --/
... ...

I tried to write a resident handler which should convert the mouse readings into joystick values and put them into the shadow register for joystick 2 (remember that on the ATARI XL/XE only joysticks 0 and 1 are in effect, and 2 & 3 just contain repeats of 0 and 1).

Then, if you read STICK(2), you would have the translated values;
STRIG(2) would give you the status of the right mouse button; and
for the left button, you would still use STRIG(0). Unfortunately,
the routine got hanged sooner or later, and I had to return the
borrowed mouse before I could finish debugging it. Maybe I can
borrow another and resume the task...

```
Joystick miscellany - updated on February 13, 1996
--------------------------------------------------

1- Analog joysticks
-------------------
Have you ever considered the fact that an IBM-PC-type analog joystick
consists of two potentiometers (one each for the x- and y-axis) and two
pushbuttons, just like a set of ATARI (or Commodore) paddles? Have you
ever thought of connecting such a proportional joystick to your ATARI or
Commodore computer in order to use it with your programs? Well, here's
how to build a 15-pin analog joystick port from 2 9-pin ATARI ports. You
will need a 15-pin and 2 9-pin female connectors and a 15-wire cable.

Internally, the analog joysticks are basically like this:

pb1A
|
O
| Y1
pb1B -O--+ | U
| |
GND Z
/->Z Ry Rx=Ry=200-250 K
| Z
/----\ | |
v | \--+ D
X1 ----NNNNN--+----+----- +5V
L Rx R

The pin assignmet in the 15-pin IBM-connector is the following:

pin _________________________
# function \8 7 6 5 4 3 2 1/
------------ \15_14_13_12_11_10__9/
1 +5V
2 pb1A
3 X1
4 GND
6 Y1
7 pb1B
10 pb2A
11 X2
13 Y2
14 pb2B
```

Similarly, the pin assignment for the DB9 connectors (in the case of paddles) is the following:

```
pin ___________
# function \5 4 3 2 1/
------------ \9_8_7_6/
3 L button
4 R button
5 R paddle
7 +5V
8 GND
9 L paddle
```

Well, let's begin with the connections for 1 analog joystick. Take the cable and use it to connect the following pins on the 15-pin connector to the corresponding pins on one 9-pin connector:

```
15-pin 9-pin
-------------
1 -> 7
2 -> 3
3 -> 9
4 -> 8
6 -> 5
7 -> 4
```

Now, you can try connecting the 9-pin female to joystick port 1 on your computer and the analog joystick into the 15-pin female connector. Then, write and run a subroutine like this and try moving the joystick and pressing the buttons:

```
0 PRINT PADDLE(0), PADDLE(1), PTRIG(0), PTRIG(1):GOTO 0
```

You could also load any program which uses a touch tablet and test the joystick instead (e.g, ATARI ARTIST).

If you have a dual analog joystick ('dual' in the same way that paddles are connected by pairs to a single port), then you can now make the following additional connections from the 15-pin female to the second 9-pin female:

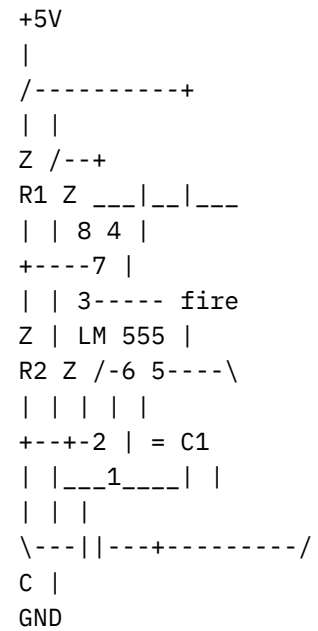
```
15-pin 9-pin
-------------
10 -> 3
11 -> 9
13 -> 5
14 -> 4
```

Now connect the second 9-pin female to joystick port 2 on your computer; the second analog joystick should be readable through PADDLE(2), PADDLE(3), PTRIG(2) and PTRIG(3).

```
2- Portable autofire
--------------------
```

This is a solution for those joysticks which don't have a +5V line (red wire typically, connected to pin 7). You will need a 9-pin female and a 9-pin male connector, an LM 555 timer IC, two resistors (R1=R2=10 K), two capacitors (C=100 nF, C1=0,42 nF), a two-position switch and some wire. Since you will need also an appropiate casing, I would recommend you to use a 9-pin null modem adapter (e.g., Radio Shack #26-264), which will provide you already with the casing, wiring and DB9 connectors.

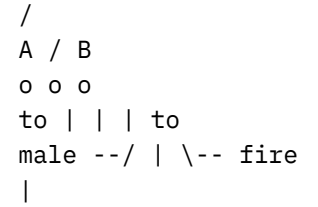
First, build the following autofire circuit in the smallest possible area (less than 0,5"x0,5"):



If you are using the null modem adapter, skip this paragraph and continue with the next. If you aren't and are building the adapter with separate parts, then just connect each pin from the 9-pin female to the same pin on the male connector. Now you've just built what the adapter looks like on the inside.

Now, if you are using the null modem adapter: just open the casing and accomodate the circuit inside. Make sure that all pins on the male are connected to the same pin # on the female (i.e., pin #1 to pin #1, pin #2 to pin #2, etc.) and not cross-connected.

Now for both: Connect the +5V line to pin #7 (either on the male or the female connector, it's the same). Similarly, connect the GND line to pin #8. Cut the wire from pin #6 just in the middle. Now, proceed to make the following connections on the switch:



to female

Now, make the appropiate holes in the casing for the switch. Fix the switch in place and close the casing. Now the portable autofire is ready for use.

Just connect the portable autofire between the joystick port on the computer and the joystick's plug. With the switch in the A position, you will simply bypass the autofire circuit (autofire disconnected); when it is in the B position, the autofire is connected and the joystick's fire button is disabled. The advantage of this design is that you can connect the portable autofire to any joystick you want, without having to make any permanent modification to it.

3- Tank-style levers

Surely you remember BATTLEZONE (tm), don't you? I loved playing that game on the arcades, since it was one of the first games to offer you 3-D graphics and a first-person viewpoint. Then ATARI released it for its 2600 VCS (after many years), with some of the best graphics I've seen on the 2600 VCS. And then came the version for ATARI 8-bit computers... the only one I haven't seen, because somebody stole the last cartridge from the computer fair back in 1989; I assume the controls were like the 2600 VCS version:

```
forward
^
turn left | turn right
rotate \ | /
counterclockwise <----*----> rotate clockwise
/ | \
reverse left | reverse right
v
back
```

The arcade version had real tank-like controls instead:

```
left right
tread tread

forward ^ ^ forward
| |
motionless + + motionless
| |
back v v back
```

The combined motion of both treads gave the same 8 different possible movements for the tank.
Well, if you (like me) aren't happy with using just the joystick and want to have a more 'realistic' feeling, here's how to build your tank levers, including the necessary circuitry to provide the respective joystick signals for each combination.

Let's compare the switch values for the 9 joystick positions and the
9 tank-lever positions:

joystick tank levers

U X Y
SWITCHES L-+-R | |
D Z W

movement RLDU XYZW
---
motionless 1111 1111

forward 1110 0011
back 1101 1100
counterclockwise 1011 1001
clockwise 0111 0110

turn right 0110 0111
turn left 1010 1011
reverse right 0101 1101
reverse left 1001 1110

The functions which map (X,Y,Z,W) to (R,L,D,U) are:

_ ___
R = Y + X.Z + Z+W _
_ ___ = NOT
L = X + Y.W + Z+W
___ . = AND
D = X.Y + Z.W
___ + = OR
U = X.Y + Z.W

You will need:

- 1 74LS04 IC (6xNOT) (IC1)
- 1 74LS08 IC (4xAND-2) (IC2)
- 2 74LS32 ICs (4xOR-2) (IC3 and IC4)
- 4 14-pin IC sockets (optional)
- 1 2"x3" IC PCBoard (like Radio Shack #276-150A)
- lots of jumper wires
- soldering iron and solder wire
- 1 9-wire cable (as long as you like)
- 1 joystick connector (9-pin, female)
- 4 pushbuttons for the lever switches (X, Y, Z and W)
- as much pushbuttons as you want for firebuttons
- 1 board for mounting the switches
- 2 self-centering levers (inverted T form)
- 1 casing for the whole

Connections:

First, solder all wires of the cable to the 9 pins of the joystick
connector. The free ends of the wires will be referred to as joyN,
where N=1-9 is the corresponding pin number at the connector.

```
___________
\5 4 3 2 1/
\9_8_7_6/
```

Mount all 4 lever switches in their board, properly spaced. Remember
that the levers are supposed to press them once in place.

```
X -O O- Y
| |
+-----+--- GND
| |
Z -O O- W
```

Solder the 4 sockets (or the ICs, directly, if you're cheap) in place
in the PCBoard. Pin # of ICx will be referred to as ICx-#, where x=1-4
and #=1-14.

```
_______________________________
|() ..................... ()|
| .:::::::::::::::::::::::. |
| ::|o_IC2__|:::|o_IC3__|:: |
| :::::::::::::::::::::::::: |
| :::::::::::::::::::::::::: |
| :::::::::::::::::::::::::: |
| :::::::::::::::::::::::::: |
| ::|o_IC1__|:::|o_IC4__|:: |
| :::::::::::::::::::::::: |
|()_________________________()|
```

Now use the jumper wires to make the following connections:

+5V: joy7, IC1-14, IC2-14, IC3-14, IC4-14
GND: joy8, IC1-7, IC2-7, IC3-7, IC4-7, ground of all pushbuttons
R: joy4, IC4-6
L: joy3, IC4-8
D: joy2, IC3-3
U: joy1, IC3-6
FIRE: joy6, trigger of (all) firebutton(s)
X: switch X, IC1-11, IC2-2, IC2-4
Y: switch Y, IC1-9, IC2-5, IC2-10
Z: switch Z, IC2-1, IC2-12, IC3-12
W: switch W, IC2-9, IC2-13, IC3-13
IC1-1, IC2-6, IC3-4
IC1-2, IC3-2
IC1-3, IC2-11, IC3-1
IC1-4, IC3-5
IC1-8, IC4-1
IC1-10, IC4-13
IC1-12, IC4-5, IC4-9
IC1-13, IC3-11
IC2-3, IC4-2

IC2-8, IC4-12
IC4-3, IC4-4
IC4-10, IC4-11

Of course, there is a much simpler -though more expensive- way to build
the necessary circuit. If we express R, L, D and U in terms of Maxterms
of (X,Y,Z,W), then we have:

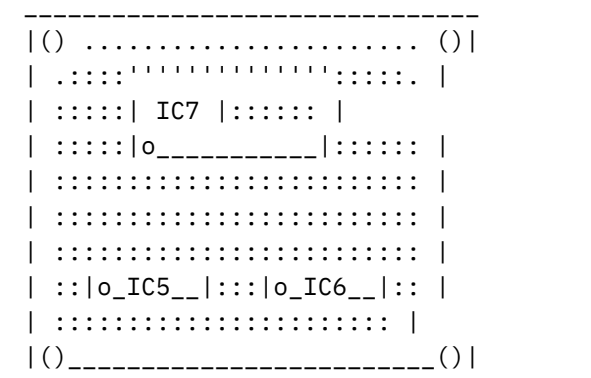
R=M6.M7.M13 L=M9.M11.M14
. = AND
D=M11.M13.M14 U=M3.M7.M11

Look at the table. You will see that the Maxterms correspond to the
4-digit binary numbers XYZW for which the respective variable
(R, L, D or U) is 0.

Now, instead of the 4 ICs (and the optional 14-pin IC sockets) you will
need:

- 2 74LS11 ICs (3xAND-3) (IC5 and IC6)
- 1 74LS154 IC (4-to-16 decoder) (IC7)
- 2 14-pin and 1 24-pin IC sockets (optional)

Now, solder the sockets (or the ICs) on the PCBoard.



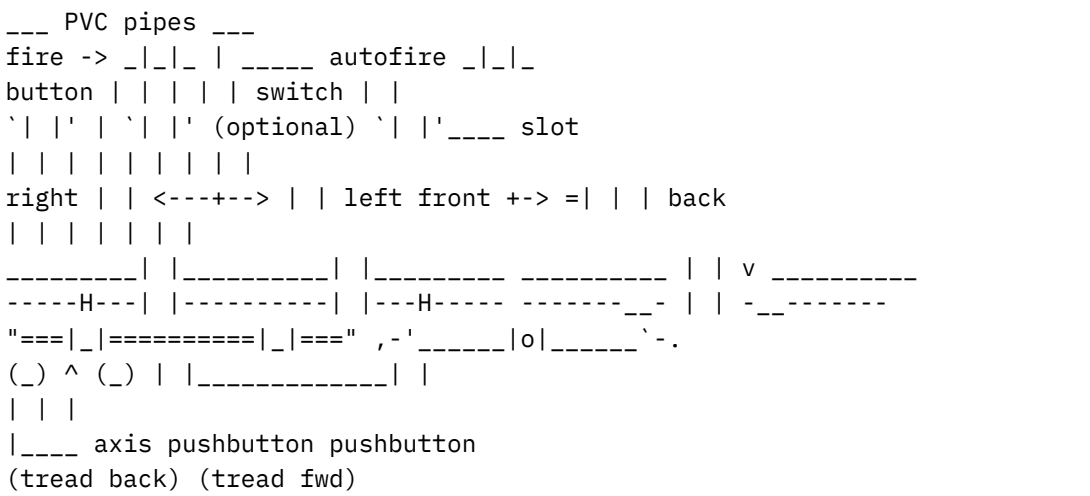
Now, soldering the jumpers, make the following connections:

+5V: joy7, IC5-14, IC6-14, IC7-24
GND: joy8, IC5-7, IC6-7, IC7-12, IC7-18, IC7-19, ground of pushbuttons
R: joy4, IC6-12
L: joy3, IC6-6
D: joy2, IC6-8
U: joy1, IC5-8
FIRE: joy6, trigger of (all) firebutton(s)
X: switch X, IC7-20
Y: switch Y, IC7-21
Z: switch Z, IC7-22
W: switch W, IC7-23
M3: IC7-4, IC5-11
M6: IC7-7, IC6-1

M7: IC7-8, IC6-2, IC5-10
M9: IC7-10, IC6-3
M11: IC7-13, IC6-5, IC5-9
M12: IC7-14, IC6-9
M13: IC7-15, IC6-10, IC6-13
M14: IC7-16, IC6-11, IC6-4

If you're using sockets, then now you can place the ICs on them.
You can include an autofire switch in the design, if you want. You could
also have the two pots (joy5 and joy9) being used for anything you can
imagine.

For the levers, you can use PVC piping. You could also use wood or metal,
but the PVC pipes have the advantage that they are hollow, which allows
you to pass the wiring through them. I would suggest the following
arrangement:



Front view Side view
___ PVC pipes ___
fire -> _|_|_ | _____ autofire _|_|_
button | | | | | switch | |
`| |' | `| |' (optional) `| |'____ slot
| | | | | | | | |
right | | <---+--> | | left front +-> =| | | back
| | | | | | |
_____| |_____| |_____ _____ | | v _____
-----H---| |-----| |---H----- -------__- | | -__-------
"===|_|=====|_|===" ,-'______|o|______`-.
(_) ^ (_) | |_____| |
| | |
|____ axis pushbutton pushbutton
(tread back) (tread fwd)

Make sure the levers will press the pushbuttons when pushed. You will
have to assemble the whole thing inside the casing, making it fit.
Now you're ready to blast those @&%# enemy Automatons!

I probably tried this with a video mode that used
much of the total bandwidth and then I got the impression that the
CPU had no access to the memory.

I remember now that I was able to create a pattern with very stable
bars, but that was when the video DMA was switched off via address
559. The pseudo code probably looked like this.

```
-delay CPU, wait for horizontal synchronization
-set background colour to red
-set background colour to green
-set background colour to red
-set background colour to green
-etc 8-12 times
```

IMHO: Custom silicon would do you in.
#1) Even a small production run of new [GTIA, POKEY, ...] with the
existing silicon would be tens of $thousands.
& you'd still end up with parts that most consumers, present company
excepted, find unsatisfactory.
#2) Updated silicon
Same cost for a production run + you'd have to pay someone to do the
upgrade. I only know of one person that does this level of design
& from what I understand, she makes something like $80k/year. Good
luck trying to get her away from her current employer to work on a
project like this.

If we think about it, many of Atari's products/ideas/chips or whatever were from outside developers. The Lynx (and I still like mine!) was from the late lamented Epyx, and weren't a number of the 400/800 chips developed outside the company?

I agree, the Tramiel's lost their opportunity to outmarket Nintendo with the 7800 and possible subsequent products. The Jag has largely failed because Atari failed to get any third party support (the Sony Playstation was also a new startup, but with Sony's developer support money, it has taken off and reportedly is outselling the Sega Saturn 4 to 1).

In the end though, Mark's statement above seems correct to me. Atari at least survived.

1199. Unvelievable mishaps

Newsgroup: comp.sys.atari.8bit
Date: 1996-02-28 00:00:00 UTC
From: JTKIRK@urp.edu.pe
Message-ID: <m0tropH-000OeQC@rcp.net.pe>
Source record: 85524

Something VERY strange happened to me (to my computer, more properly) yesterday night. I returned from work and went to print this digest. So I turned on the drives (I've got 2 XF551s and 1 1050, D1-D3, respectively) and inserted my MyDOS DS/DD boot disk. As I turned the computer on, I expected to hear the familiar sound of a DD disk booting... instead, I heard the also-familiar-but-nasty-to-hear-when-you-do-not-intend-to SD disk formatting sound!!!!!!!
Theoretically, this shouldn't have happened. I lost the first 29 tracks before I could react. Fortunately, my disk was organized in Sub-dirs, so I only lost the DOS files and 2 sub-dirs (one from BASIC programs, the other a BASIC adventure game from Spain, DON QUIJOTE), but I think I can get them back from a friend.
Has anyone had such a problem occur or something worse (and more Unbelievable)?
(I chose the Subject "Unbelievable mishaps" because "Unsolved Mysteries" has been already used :-))
Bye.

M.A.Ch.F.

"FS/OBO: XEGS Outfit & Carts"

Hi! - I'm taking offers on the following items. Please note the minimum acceptable amounts for each. Offers will be solicited until midnight March 10th (Sunday). At that time I will notify the buyers of their totals and shipping charges.

I am looking to make some quick sales without the hassle of running an auction. In the process, you have the opportunity to buy something you want at a price you are comfortable with.

Please note the conditions of sale following the list of items.

Feel free to call me any time or email with any question... Scott

Scott Williams
717 Engelhart Drive
Madison, WI 53713-4747
608.276.9528

****

Atari XEGS Outfit
includes... XEGS console with p.s.
XEGS keyboard
XEGS joystick
XEGS light gun (missing Atari decals on each side)
($30 minimum OBO - recent light gun sales alone have been running $15!
)

****

Atari 8-bit carts (brown case)
($.50 minimum each OBO)

Basic Computing Language
Pac-Man
Star Raiders

****

The Rules:
****

1. NOTE... These items are USED and may exhibit some degree of wear. If condition is important, ask before making an offer. All items are tested and in working order.

2. When you submit an offer, you must include your full name and mailing address as
well as phone number or the offer will not be considered.

3. Payment: check on amounts under $10.00, money order on amounts over $10.00. I reserve the right to hold shipment on items paid with personal
checks for 14 business days while awaiting clearance. Personal checks sent
in lieu of money orders on amounts over $10.00 will be returned and the item(s) offered to the next highest buyer.

4. Purchasers are expected to pay for their purchases within 7 days of notification of sale results.

5. I will ship within 48 hours of payment reciept if payment is by money order.

6. Ties will be broken by first offer received.

7. I reserve the right to stop this sale or alter the rules for any reason.

:
: Hello James,
:
: JRL> So where do I get the driver for the 850? I have a one sector
:
: JRL> AUTORUN.SYS on the disk with the Amodem program; could that be it?
:
: I think one sector is too small for it to include the handler. Chances are
: that the AUTORUN.SYS runs AMODEM, early versions of which are written in BASIC.

The stage 1 download code for the 850 can be as small as 11 bytes. Anything
else is just code to see if the handler actually loaded. The handler itself
resides in the 850 ROM and is downloaded over the SIO bus into main memory.

: JRL> Because it doesn't work even if I boot off that disk.
:
: Yep, sounds like it's missing. :-(

I dont know if anyone mentioned it, but are you getting the long 'beeeeeeeep'
when the handler block 3 downloads?

Steve

JTKIRK@urp.edu.pe wrote:

;It
;would seem to me that the only way to turn a bootable disk into an XFD image
;would necessarily imply disabling any copy-protection and some disassembly of
;the code, in some cases.

Not necessarily. Some disks have quite simple disk protection. I remmeber Atari's Macro Assembler checked if a certain sector was readable... if it was then it's a fake and it won't run.

You can write a simple program to see which sectors are bad. With Rainbow (8bit emulator for the Mac), I could easily incorporate a 'bad sector table' for each XFD image which will tell Rainbow to return a 'bad sector error' to the software. The above example will then work :)

However, I'm sure that most software protection a great deal more sophisticated and requires more technical disk know-how than I have.

Chris Lam,
Rainbow Keeper.

David Wyn Davies (101502.651@CompuServe.COM) wrote:
: Just want to rattle off a couple of quick notes ...

: First, as Joel Goodwin mentioned in a previous post, the SEGA
: game 'Mega Bomberman' would be easy enough to write for the 8-bit
: (actually, I know it as an ST/Amiga game called Dynablasters).

: THE GOOD NEWS: I have started on such a game and even have a
: joystick port doubler to enable up to four player simultaneous
: action on a standard XL/XE.

Please describe "Mega Bomberman". I recall a game on my brother's C=64 where you were some funky dude collecting bombs on platforms on a static screen. I forget what else happened, but they always had famous backgrounds (Paris, New York, etc.) on the levels. And it had COOL music.

Was this "Bomberman"?

: THE BAD NEWS: I haven't been able to do anything with it since
: last November/December. At the moment, I have some fade in/out
: routines plus the screen drawing routines (totally random - never
: the same game twice). However, I could do with some help on the
: graphics so if there are any artists out there, get in touch.

What in graphics do you need? Wanna make this the first 100% ray-traced Atari 8-bit game!? :) (Like DKCountry was for SNES ;^))

: The second note is in reply to Bill Kendrick's note on a DOOM
: engine ...

: Bill, yes there is a DOOM engine under development. Some Polish
: guy is working on it I think but is having one or two teething
: problems.

Who is doing it? ("Some guy" is >ALL< I've heard! Does he have a NAME? Or an alias?!) Nir Dary got in touch with me recently (helps to have a Web page, huh? :)) and said he's seen it. Have you? What's it like?

I remember in the "Drunk Tank" demo there was a 3D "Doom engine" which didn't prove anything to me except that it was SLOW. It did texture-mapping on walls, except you never rotated! You just went straight. And it was just a long hallway (no gaps, etc.) Inotherwords, it was less impressive than Alternate Reality's 3D engine (which is still one of the best, but not when it comes to rotation, like "Capture The Flag" does!)

: I have been asked to try and locate some DOOM source code to help him out
: with but I don't think there is any ... or is there?

ID's Wolfenstein C source is up, and there's a whole FTP site with tons of (mainly PC) programming tricks (3D, demo stuff, etc.). Go for it! :)

Anyway - how far has it come? What can it do? It IS going to be made into a game and NOT a demo, right? And where the hell are the games with good fast 3D filled poly's, huh? HUH!? Oh.. umm .. sorry. :)

Not only are Atari 8-bitters cheap, but we're damned SLOW too! ;)

Hi all,
I just picked up two cases of Atari games from a guy for $10. Two
disks 9so far) are bad and they have games on them which I REALLY wanted
to play. Mountain King and Marble Madness. Anyone have these? I'd rather
have the original versions. Questions about these:

Marble Madness was made by Electronic Arts, correct? As people have found
out by now, floppies don't last forever. I have the Archiver/editor. Is
there ANY way to make a backup of an EA disk? I never could figure out how.

I remember Mountain King had background music. Was this the floppy-only
version or did the cart have it too?

Thanks!

Mike

>inputs.

Has anyone tried connecting the Atari to a TV with 100Hz (PAL) or 120Hz (NTSC)
image frequency? How does it look? Is it any good? Sometimes I simply can't
bear those 50 Hz anymore. I wished there was a way to build an interface
converting 50 Hz from the Atari to, say 70 Hz. And then, this interface
should also produce VGA compatible output so you could just hook up
your Atari to any generic VGA monitor.

Maybe this kind of interface wouldn't be complicated at all. All you need
is a PAL/NTSC decoder chip connected to a frame buffer (dual ported). Then
the contents of the frame buffer need to be piped through a video D/A
converter 70 times a second. And we need some sync generators as well
(maybe a GAL/PAL?). Any volunteers for this project? *sigh* probably not.

best wishes,

-Marek

> If anyone's interested, please make an offer including shipping for
>it...otherwise, it's getting trashed...:-)

Funny...I don't remember calling any of this stuff "junk", but...:-)
Ok...I've sold the 835 modem, the 1050 disk drive, and several
cartridges...I still have a monitor left that I didn't post the first time
and just ran across it...It's an Amdek Color-I...there're two people
"thinking" about getting it, but I'm open to bids on it...it works fine...I
even have the cable that goes to it...
I also have the 410 left...I'll sell it for the highest bid over
$10.00 + shipping...Whoever buys it can also have the few cassettes I have
for it...they're not guaranteed to work as the media is pretty old, but if
the tapes work, it's your gain! :-)
I have 2 extra power supplies I'll sell for $5.00 each + shipping...

Thanks!

Tiffany

I think the cost and difficulty would be at least comparable to building
your own hard disk interface without using an MIO or Black Box. It's a
shame we can't build our own Antic and GTIA chips for faster scan rates,
more characters per line, RGB output, etc.

Message-ID: <BHLqLW6.lmcclure@delphi.com>
Source record: 85540

In a message dated 2-26-96, Dave (dac@hevanet.com) said:
|
| "I mean old software that falls out of the
| copyright law by being past the 8 year mark.
| I had hear this, but wondered if it's true.
|
|
Not only not true, but not even close. Since 1978, copyrights have had
a term of the life of the author(s) + 50 years (to allow the author's
estate to benefit) for works copyrighted by individuals. For works-for-hire
(i.e., copyrights held by a corporation), the term is 75 years.

In other words, even if someone wrote a program for the Atari back in
1980, and croaked the next day, it will not fall into public domain
until 2030!

Wow! I have never had that happen in fifteen years of Atari disk drive use.

Was it an XF551? My experience with them is less in-depth.

>inputs.

The 1802 is good, and I think there was a later one with a whole
different numbering scheme too...

I have a 1702 and 1802, and the 1802 seems a lot more sensitive to my
hacked 1200xl's RF noise. But I prefer the 1802's front switch to the
1702's back switch.

No PPP for the Atari 8-bits, but if your account allows a traditional
terminal connection you can connect with your Atari, and use yor
provider's machine to read news.

Wow, have we really reached the point that people are _unaware_ of non
SLIP, non-PPP, dialup terminal connections? I'm too young to feel
this old! :-)

That was Bombjack.

[As for what else happened, various monsters ran around, either walking
along the platforms and falling off to lower ones, or just flying about.
Bonus balls popped up to either increase a score multiplier or freeze
monsters and let you kill them for a bit. If you defused the bombs in
order (look for the fizzing fuse) you got a large bonus.]

Source record: 85553

Word has come in that the 8th annual MIST Atari computer show will be held on July 13 at the Best Western Waterfront Plaza motel In Indianapolis, Indiana. This show is for all Atarians and all types of Atari products.

Vendors interested in obtaining tables should contact Charlie Sears at voice number 317-535-4829, or snailmail at 551 Mooreland, New Whiteland, IN 46184-1263. Another show organizer you can contact is Stu Huffman, voice 812-988-7558, or email at: shuffman@ideanet.doe.state.in.us.

Sleeping rooms at the Best Western should be reserved far in advance! A rate of $55 single, $61 double, is available by calling the motel at 317-299-8400, extension 393, and talking to the conference manager. To get this rate you must call by June 12.

The MIST show is sponsored by three Atari user groups in Indiana. Specific hours for the show are expected to be announced later.

Re: "Frogger" music

The original Sierra disk/cassette version featured popular tunes interpolated throughout, like "Camptown Races," "Yankee Doodle Dandy," and a few others that I couldn't identify. A couple sounded like some foreign folk tunes, but I could be wrong about that. I think the music was programmed by some customized POKEY software, which was a reason why it sounded really good.

I have just come across a good deal and will pass it on to the users..

5ea XF 551 disk drives used in good condition, may have a school district engraved in the case..$41.00 ea shipped.

at least 6ea 130XE stock..same as above but relitave clean $35.00ea shipped.

at least 6 850 interfaces, comes with power supply you furnish cables..$15.00 ea shipped

1050 Disk Drives stock same as above may have school dist engraved in top..but drive is fine..with sio and power supply $15.00 ea shipped..

800xl's..some have school engraved in top but functon properly..with video cable and power supply..$15.00 shipped. If you want them cleaned up and engraving sanded off add $8.00.

Have 1 XM 301 direct connect modem..make offer limited use..like new but 300b...!

2 1000 MPP modems..direct connect..

SIO cables at $1.50 pluss shipping..

If you need a chip, can furnish Used Atari parts...at a resonable price..plus shipping..

41256k Ram chips for upgrades used pull guranteed working will test prior to shipping $.75 ea..

Need something else? send e-mail may have it collecting dust?

Holy cow! I've always been amazed at what a capable device the 850 is.
Once I got over being annoyed at having to buy a separate interface
for printing in the first place, that is. That's one manual I don't
think I have. But I will check the Tech Ref Notes, as it duplicated a
lot of stuff in the separate manuals. Thanks!

Gary Holder

Ok, i got enough extra systems around to force me to have a sale to make space. Prices are low enough that they'll sell quickly, I hope. All systems are in good working condition unless otherwise noted, you will have to supply your own rf boxes in most cases and sometimes an RCA cable (both available cheaply at Radio Shack)...

1. Intellivision systems, work great. power supply, two good pads (some have rf cable). First two buyers get free cart! my choice.

price: $10 plus shipping.

1a. Sears Super Video Arcade (sears Intellivision knock off) w/ powersupply rca cable and two detachable controllers (work)

price: $15 plus shipping.

2. Colecovision systems. w/ps, 2 good controllers and rca cable if you're lucky. I will also throw in a donkey kong cart.

price: $20 plus shipping.

2a. colecovision system w/loose rca plug. can be taped in place, resoldered, or you can just be very careful not to shake it when you play :) w/ps, two good controllers and donkey kong.

price: $10 plus shipping.

3. 5200 system (4 port) w/ special switchbox. no ps, or joysticks. Works great!

price: $10 plus shipping (heavy)

3a. 5200 system (2 port) w/ flakey video (probably loose connection). no ps, or joysticks.

price: $5 plus shipping (heavy)

4. Odyssey 2 system w/ power supply, 2 sticks and modified video cable (now uses standard RCA type plug). comes with waterdamaged box. this baby wants to work, only needs a good cleaning. but since i got another O^2 in better shape, i haven't bothered.

price: $5 plus shipping (big)

5. 5200 trak ball plus 5200 centipede cart. works, ball needs a cleaning tho'.

price: $15 plus shipping.

6. C64 computer system, w/1541 disk drive, dusk cover and box of assorted disks. all powersupplies and video hookups included, 'cept switchbox. (everything works)

price: $20 plus shipping.

7. Turbo Grafx 16 system, w/out ps, video cable or controller. untested.

price: $5 plus shipping.

8. Atari 1050 disk drive, non-working. no ps, no sio cable.

price: $??? plus shipping.

Ted B

I just came accross a MAG, today from England..
NET..gives all the good bad and indifferent about the Internet
relates to 98% of the users on the internet today are violating
one law or another, and the ramifications of those violation both
within the US and Europe.

I will subscribe to this publication, as it deals in depth with
Liable, defimation of character, who is sueing who for what ect
related to internet traffic..

What most users do not realize is that Copyrigths belong to the
author from conseption, unless sold out to corporatons for hire.

Any message posted on the internet..(like this one) is actually
copyrighted at the time I post it..If I do not give my permission
for you to download it to your hard drive you sir! are in violat
on of the Copyright law within the US and Internationaly as the
Copyright Law is recoginsed by both..While not many authors press
the issue it is still there and the law covers them within the
U.S and Internationaly..

You get out of line and call a person a Thief/ect..you are
actually legaly liable for you actions and they can sue for
liable/defanitaion of character ect..

1238. Re: Error 130 -- where's the 850 interface?

Date: 1996-03-02 00:00:00 UTC
From: BobKlaas <bobkla19@mail.tcd.net>
Message-ID: <4h8k57$onq@news.tcd.net>
Source record: 85464

You usually have to do nothing to have the 850 interface to come up..just turn it on and boot your computer. Listen to the boot section..turn up your volume..you will hear the 850 kick in..if not then it is not functioning..Replace the lm3086 chips twards the front of the unit..those closest to you..if this doesn't work then I can fix it or send you one that does work for $15.00 with yours in trade?
bob

1239. Re: Error 130 -- where's the 850 interface?

Newsgroup: comp.sys.atari.8bit

1240. Big John's Auction

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-02 00:00:00 UTC
From: jhardie@usa.pipeline.com
Message-ID: <4hahpp$jk8@news1.usa.pipeline.com>
Source record: 85555

Welcome to Big John's Auction/Sale.

Basically, this is a case of "I need to get rid of this stuff or my wife will kill me".

Below you'll find a list of items for auction followed by a list of items for sale. This stuff is a conglomeration of common, uncommon and rare, cartridges and other odds and ends. All items are new in the box unless otherwise noted. Please read the rules at the end of this post.

AUCTION SECTION

ATARI 2600

Astroblast
Battlezone
Circus Atari
Codebreaker
Dig Dug
Joust
Jungle Hunt
Kangaroo
Moon Patrol
Ms. Pac-man
Phoenix
Pole Position
Realsports Baseball
Solaris
Space Invaders (red box)
Star Raiders w/ Video Touchpad (used)
Super Football
Venture (Atari)
Yars' Revenge

Supercharger

Phaser Patrol w/ supercharger unit
Dragon Stomper
Fireball
Killer Satellites

Hardware

Roklan Unroller Controller (2 per box)
Game Selex (9 game switcher from Starplex)

VIC-20

Defender (Atarisoft - label imperfections)
Ms. Pac-man (Atarisoft - label imperfections)
Dragonfire (Imagic)
Congo Bongo

TI-994A >>items auctioned as a set<<

Complete system includes console (flaky keyboard), power supply, RF unit, joysticks, cassette interface cable, dual cassette interface cable, and manuals. Software includes:
Cassette: Ghost Town, Adventureland, Pirate's Adventure
Cartridge: Parsec, Tombstone City, A-Maze-Ing, Video Chess, Munchman, Chisolm Trail, Adventure, TI Invaders.

INTELLIVISION >>items auctioned as a set<<

Intellivision 1 unit (brown) with 2 used games: Pitfall (cart, instr. & box), Super Cobra (cart, instr. & box)

COMMODORE 64

Alien Group Voice Box (w/ software)
Tooth Protectors
Assembler
Visible Solar System

APPLE 2

Jungle Hunt (Atarisoft)

IBM

Robotron: 2084 (Atarisoft)
Moon Patrol (Atarisoft)

ATARI 8-BIT

Ballblazer
Barnyard Blaster (light gun)
Buck Rogers
Chicken
Crossfire
Defender
Diamond Mine
Football
Galaxian
Journey to the Planets
Joust
Space Journey
Star Raiders 2 (disk)
Tennis
Wizard of Wor

Atari 400/800 Field Service Manual (schematics)
Atari Hardware Manual
De Re Atari (hardware info)

Versawriter Tracing System

SEGA

Genesis Batter-up Baseball Bat Accessory
Master System 3-D glasses

NINTENDO

Super NES Batter-up Baseball Bat Accessory
Super NES TV Golf Club Accessory

ODDS & ENDS

Timex Sinclair 1000 (computer only, untested)
Tandy 1000 computer w/20 meg HD and RGB Color Monitor (Tandy CM-5)
Disk Drives - One 180K & One 360K (slave) disk drives in case w/ power
supply

FOR SALE

ATARI 2600 $3 each

Defender Pac-man
Star Raiders (no controller)
Football Asteroids
Realsports Football (dented box)
Galaxian Basketball
Realsports Volleyball

ATARI 5200

Pac-man $1
Qix $3
Star Raiders $3
Space Dungeon $7
(w/holder)

ATARI 7800 $5 each

Asteroids Choplifter
Food Fight
Jinks Centipede
Hat Trick
One-on-One Robotron: 2084
Joust
Ballblazer Karateka
Xevious
Galaga

MISC. HARDWARE

Coleco Roller Controller w/Slither (mangled box) $10
Paddle Controllers $4
Keypad Controller $4
Nintendo U-Force $10
Atari 2600 Jr. w/power supply $10
Atari 7800 (console only) $10
Atari CX-85 Numeric Keypad (for computer) $3
Atari ST Trakball $10
Atari PCM124 Monochrome Monitor for the IBM $50

Infocom Hint Books $3 each

Hollywood Hijinx/Bureaucracy
A Mind Forever Voyaging
Planetfall
Trinity
Witness

RULES
****

1. Auction runs until March 14. At that time the bids will go to a
once, twice, sold format.

2. Minimum bid increments are as follows:
-- $1 on items up to $30
-- $2 on items over $30
-- $3 on items over $50
-- $5 on items over $100

3. In the case of a tie, the first person with that bid will
be designated as the high bidder.

4. Payment is to be done by personal check or money order.
Please add $3 for shipping of the first cartridge and $1 for each
additional cart. Hardware items, I will let you know the
shipping rates.
All items will be sent priority mail unless you specify
otherwise.

5. Updates will periodically be posted in rec.games.video.classic
I will automatically put bidders on the mailing list. If you don't
make a bid but would like to be on my mailing list, please let me
know. I will e-mail updates more frequently to those on my
mailing list.

6. I reserve the right to stop this auction, alter the rules, or make other

changes for any reason.

7. If you're interested in trading, let me know. Pre-NES only, please.

8. Send bids to jhardie@usa.pipeline.com.

Thanks for reading, and good luck!

1241. FS: Misc-Atari ST/8-bit software/cartridges

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-03 00:00:00 UTC
From: steven@rain.org
Message-ID: <4hb4q3$im9@news.rain.org>
Source record: 85466
Cross-posted to: comp.sys.atari.8bit,misc.forsale.computers.other.software

I am posting this message for a friend without Internet access.

ALL SOFTWARE PACKAGES ARE ORIGINALS WITH COMPLETE DOCS, DISKS, AND
BOXES, unless noted with a * which means there is no box. I will guarantee
all disks and cartridges work or I will refund your money.

Atari ST 3.5" software - $3 each
E-Z Track MIDI Sequencer - new, unopened (2 of them)
Personal Pascal *
ST Key *

Atari 8-bit 5.25" software - $3 each
Atariwriter (cartridge) *
Home Filing Manager (disk) *
Pilot language (cartridge) *
Print Shop (disk) *
Telelink (cartridge) *
Turtle Tracks (disk)

Also looking for Clowns & Balloons game disk -- will trade

The above prices do not include shipping. I'm in California. Depending on
how far away you are, how many items you want, if they have boxes, and how
heavy everything is, the shipping cost usually ranges from $4 to $8 UPS or
priority US mail. I don't have time to deal with lots of small transactions,
so I need to ask a minimum of $12 worth of items. I'll pay all shipping if
you buy (almost) everything.

I will only ship within the continental UNITED STATES. No exceptions.

Thank you,
Randall

Please send e-mail to steven@rain.org and include at the top of the
message or in the subject header: "Forward to Randall". Because these
messages will be hand-carried on floppy disk once per week, it may take
me a little while to respond.

I agree whole heartedly about the writing new software
comments. Unfortunately, it doesn't help with the original problem we
are trying to rectify. Still a damned good idea though.

Better yet...

Why not write some games and distribute them any way you'd like...
Maybe post some code... C'mon folks, it doesnt take a rocket
scientist to program a 6502... I realize the need to backup this
software, but the law prohibits it, so there has to be new files
created and released... It up to you folks to keep the ball rolling,
and in order for software to be released, there must be some one
putting it there... So why not take the initiative? There are several
people here who program/contribute hardware for the 8 bit arena, so I
dont think theres a problem asking for help with your new software
title... These folks work hard at keeping the 8 bit afloat, and they
MUST be commended on their work.... PLEASE take out your ARCHIVER/BIT
copier out of the slot and slam your nearest ASM/C/BASIC/PILOT/etc
cart in there and get CODING!!! Remember, it is up to YOU to see
that 8 bit software survives in to the 21century... We are all here
for a common cause... lets make the best of it...

Hi Atarians,

in the last years I wrote some short radio related programs for
Atari130XE:

RTTY Decoder
Radio FAX Decoder with hardcopy
Control software for YAESU FRG100
Timer

This software is in german language but pretty easy to use.
(Sometime when I have more time I'll translate into english.)
If somebody interested in this package I could uuencode and post
it to this or other news group.

Subject: 1.1) What is an Atari 8-bit computer?

In order of their release, the Atari 8-bit computers include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System. The 400/800 models were first shown publicly in November 1978 and first sold in 1979. The final machine, the XE Game System, was released in 1987. Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM,

ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

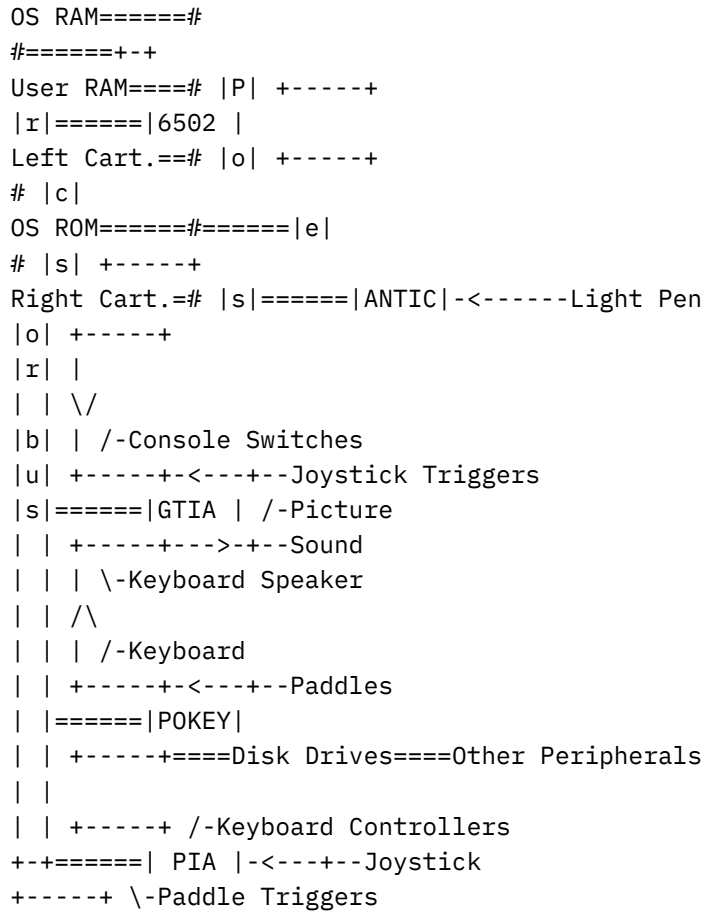
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to URL:mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is

beyond me. An 800XL can look like a 130XE with that 16-pin chip installed
(That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement



Beginners at using the 8-bit Atari platform may wish to contact Bill
Kendrick, URL:mailto:kendrick@sonoma.edu , for his Newbie/Emulator FAQ.

The following is taken from Bill's Newbie/Emulator FAQ.
Graphics:
The Atari has maximum resolution of 320 x 192 (standard, non-overscanned
screen) x 2 colors. 160 x 192 x 4, 160 x 192 x 2, 160 x 96 x 4,
160 x 96 x 2, 80 x 48 x 4, 80 x 48 x 2, 40 x 48 x 4 graphics are also
supported. 40 x 24 x 256-character (128 normal, 128 inverse, character
set indirection available) text mode is standard (2 colors).
40 x 24 x 128-multi-colored-character (4 colors per character allowed,
the other 128 characters have 4th changed into a color 5) and
40 x 12 x 128-multi-colored-character screen modes are available.
GTIA graphics support 80 x 192 x 16 shade-only, 80 x 192 x 16 hue-only,
and 80 x 192 x 9 color screen modes.
Graphics Modes Summarized:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text

2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen
modes are available.
Screen modes can be mixed (by lines) down the screen using the Display
List - a program which is executed by the ANTIC graphics chip every
screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.
All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

According to Doug Neubauer (by way of URL:mailto:finneganj@delphi.com (James
Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator

A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

[I'd like more system spec's here.]

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group through URL:news:comp.sys.atari.8bit . This is an unmoderated newsgroup for discussion about the 8-bit Atari 400/800/XL/XE computing platform. All postings to comp.sys.atari.8bit automatically appear in the Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in approximately 1986. To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

URL:news:comp.sys.atari.announce is the moderated Usenet newsgroup for news items and announcements related to all Atari computing platforms. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari announcements. Moderated by Yat Siu from URL:mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

URL:news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for advocating for or against the various Atari computing platforms. If you enjoy making comparisons between Atari 8-bit and other computing platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

URL:news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for topics in programming on the various Atari computing platforms, including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

URL:news:comp.emulators.misc is the unmoderated Usenet newsgroup for the discussion of emulating computing platforms on other computing platforms. All emulator discussion that does not involve the Apple][, the Commodore 64, or the WINE MS-Windows emulator (which each have their own emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

URL:news:comp.emulators.announce is the moderated Usenet newsgroup for news items about emulating one computing platform on another. This is a low-volume, high-signal newsgroup, useful for reaching the widest possible audience when making 8-bit Atari emulator announcements. The moderator may be contacted at URL:mailto:emulators-request@qualcomm.com .

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

URL:mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a new thread, send your posting to:

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd,
URL:mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this
discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
URL:mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

URL:mailto:comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Postings sent in this way automatically appear on comp.sys.atari.8bit and in
the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach
comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command
to LISTSERV@MARIST, or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please
note that this command must NOT be sent to INFO-A8@MARIST or to
info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX
INFO-A8" command to LISTSERV@MARIST or by sending a message to
URL:mailto:listserv@vm.marist.edu that says "index info-a8". These files can
then be retrieved by means of a "GET INFO-A8 filetype" command, or by
using the database search facilities of LISTSERV. Send an "INFO DATABASE"
command for more information on the latter.

Recent copies are also kept at
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
URL:mailto:ravi@mcnc.org (Ravi Subrahmanyan)
URL:mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you get started using it, try this example of retrieving files from the Umich Software Archives (through the barnone.citi.umich.edu mirror site). Send a message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob" Rankin.

Mail the text of your post to:

```
group.name@news.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@bull.com
group.name@cass.ma02.bull.com
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name.usenet@canaima.Berkeley.EDU
```

group.name-news@newsbase.cs.yale.edu

For example, to post to comp.sys.atari.8bit, you might send your message to:

comp.sys.atari.8bit-news@newsbase.cs.yale.edu

Be sure to include an appropriate Subject: line, and include your real name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com (Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to mailto:listserv@info.cern.ch (older address) containing the following single line. (What you put on the subject line doesn't matter; blank is OK. This line should go in the text of the message.) You will receive as a reply a simple page intended to help you learn more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of files for many computing platforms, including the Atari 8-bit computers. For more information:

Jody Lenn, mailto:lenn@atari.archive.umich.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich Archive. The Archivists request you use these mechanisms in this order of preference:

1) The number one way to get into the UMich archives is via AFS. If you have AFS, all our files are kept in the directory "/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT! Specifically, use:

URL:file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software Archives" choice. Specifically, use:

URL:gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
URL:gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
URL:gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
URL:gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

URL:http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
URL:http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

URL:ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
URL:ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
URL:ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
URL:ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
URL:ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
URL:ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
URL:ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
URL:ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files

(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts
usually don't arrive in the proper sequence. Also, please include a
message labeled "file transmission," containing a short description of
the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is
maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to
have seen no uploads for years, but there are some files here that aren't
on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by Eyvind Bernhardsen,
mailto:eyvind@lise.unit.no . PVV stands for ProgramVareVerstedet, or The
Software Workshop, a student society at the University of Trondheim, Norway.

ftp://nova.pvv.unit.no/pub/Atari/8bit (129.241.36.207)

Uploads go to ftp://nova.pvv.unit.no/incoming/atari/8bit; Eyvind moves
them to the appropriate directory. Please include a .readme file with
each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson,
mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari
8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The
Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, URL:mailto:sup8pdct@closer.brisnet.org.au for more info.

URL:ftp://203.4.149.98/8bit

Subject: 4.7) What is Preston Crow's ftp site?

Preston Crow keeps a small site filled with the latest utilities for manipulating .ATR and .XFD files.

URL:ftp://ftp.cs.dartmouth.edu/pub/crow/atari/

Subject: 4.8) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only) on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

URL:ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National Public Telecomputing Network. It can be accessed by any of the following: telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are automatically members of the official Atari user group C.A.I.N. - Central Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari Community E-Mail Directory" listing. Send correspondence and press releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the Youngstown Free-Net Atari SIG?

Youngstown Free-Net (Youngstown, Ohio USA)
telnet://visitor@yfn.ysu.edu (192.55.234.27)

Type "go atari" to reach the Atari SIG. Write to
mailto:xx140@yfn.ysu.edu for more information.

Subject: 5.3) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.4) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.5) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.6) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

8-bit Vendor/Developer home pages are listed in the Vendor/Developer list, not
here.

Atari 8-Bit Computers FAQ and Vendor/Developer Lists

Subject: 7.9) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 8.1) What is the CAIN Newsletter?

The Central Atari Information Network Newsletter is the monthly online
magazine of the Cleveland Free-Net Atari SIG. The editor is Mark
Leair of the Atari SIG. 8-bit computers support is provided by Michael
Current and Craig Lisowski. For information, write to the Atari SIG at
mailto:xx004@cleveland.freenet.edu .

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that is common in the MS-DOS world. This is done to make the file shorter, so it takes up less space on your disk and it takes less time to transfer between computers. The archives contains several 8-bit Atari archivers fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) Okay, how about a .dcm file?

A .dcm file is a format unique to the 8-bit Atari which is used to convert entire disk images into files. To work with .dcm files you'll need:

Disk Communicator 3.2 by Bob Puff.
filenames: Archivers/dskcom32.arc or Archivers/diskcomm.arc (same thing!)

Subject: 9.4) What is an .xmo file?

.xmo stands for XMODEM. The idea was that the file was not plain text, but was a binary file. As a binary file, it had to be downloaded using a file transfer protocol such as XMODEM. The use of ".xmo" as a filename extender was popular once, but has been discouraged for years.

Subject: 10.1) What 8-bit Atari emulators exist for other computing platforms?

These are the four emulators that are usable.

1) ST Xformer 3.0, from Branch Always Software, for the Atari ST.
URL:http://www.halcyon.com/brasoft/

2) PC Xformer 3.3, from Branch Always Software, for MS-Windows.
URL:http://www.halcyon.com/brasoft/

3) Rainbow, by Chris Liam, for the Macintosh
URL:mailto:lamcw@aston.ac.uk
URL:http://www.aston.ac.uk/~lamcw/emulators.html

4) Atari Emulator for Unix and Amiga, by David Firth
Latest version: 0.2.7
URL:mailto:david@signus.demon.co.uk
URL:ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No

Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.5 XE (requires 128K) or 1.1 by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.0 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.0 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.0 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
available from mailto:brucka@eruvin.jct.ac.il

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad M.Kokoszkiewicz (KMK), mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:preston.f.crow@dartmouth.edu ,
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050 drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be used to read/write to a hard drive connected to an MS-DOS system. This can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the companion vendor/developer list) allow the Atari XF551 disk drive to read 720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software Services (see the companion vendor/developer list), allows both low density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard floppy drives to be used on the Atari. A utility is included to read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into

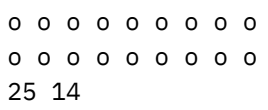
the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.



(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed but also pins 4 and 5 as well as 6 and 8. Or better yet, make a true 25 wire, straight through cable and use a commercial null modem. A commercial null modem is just a small device with the correct lines already crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

Major contributors to this section:

SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.

ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.

Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades
- Floppy Board
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.

Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition
(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE
computers (and other, those have such connector). Tested with various
Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50,
SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications,
demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) How can I use an IBM-PC as a storage device for my Atari?

Original by Dave Paterson, mailto:d.paterson2@genie.geis.com

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC
printer or to a file on the PC. High speed drives are emulated (a la US
Doubler).

All these functions are transparent at the Atari end; you never notice the
difference between SIO2PC and regular drives, except that the SIO2PC drives
are faster than any others (except Ramdisks and PBI interface drives).

SIO2PC 4.04 is shareware by Nick Kennedy.
filename: sio404.zip

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system. MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/ developer list); MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8-16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8-48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16-64K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige & black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801

1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:
1010
9 V AC 15.3 VA (1.7 A) Atari#CO14319 transformer:
400,800,822,850,1010,1200XL,256K FTe MIO
9 V AC 18 VA (2.0 A) Atari#CA014748 transformer:
400,800,810,822,850,1010,1200XL,256K FTe MIO
9 V AC 18 VA (2.0 A) Atari#CA016804 transformer:
400,800,810,822,850,1010,1200XL,256K FTe MIO
9 V AC 31 VA (3.4 A) Atari#CO17945 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551,256K FTe MIO
9 V AC 50 VA (5.6 A) Atari#CA017964 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551,256K FTe MIO

9.5 V AC 40 VA (4.2 A) Atari#CO61636 transformer:
1027

24 V AC 3.6 VA (150 mA) Atari#CA016751 transformer:
830

5 V DC 1.0 A (5.0 W) Atari#CO70042 adapter:
65XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CO61982 adapter:
600XL,800XL,65XE,130XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CA024814 adapter:
600XL,800XL,65XE,130XE,XE Games System
5 V DC ??? A (??? W) Atari#CO81982 adapter:
XL/XE

6 V DC 300 mA (1.8 W) Atari#??????? adapter:
"410P"

9 V DC 500 mA (4.5 W) Atari#CO16353 adapter:
XEP80,SX212,2600

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most

of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and

comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial programs. I haven't heard anything about OASIS IV and CARINA for a while, but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled, contains worn parts or minor scratches/dings that betray heavy service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories; heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals &

accessories etc., but contains salvageable parts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev

I'm interested in find an atari 8-bit emulator.
Can somebody post the names and internet address where
I can find some? I read earlier that there was one for
Unix and another for msdos but the authors gave no
reference to where they were kept.

I was going to wait until my test message got properly through
the network before making an announcement, but I'm glad to see the
newgroup made it to your server. It has made it to all the news
servers I have access to. I went through all the suggested
procedures for creating a new group, so hopefully this one
won't be deleted...

> I just made the first contribution. I posted four *.xfd images

I have had a number of requests for information on Atari Classics magazine, and without being too commercial...
Atari Classics is an 8-bit Atari magazine being printed by a couple of guys out in California. We would like to print about six issues per year, but manage only three or four. Each issue carries 18-24 pages of articles and 12-20 pages of ads and fluff. These are normally original texts from the Atari 8-bit community dealing with all levels of 8-bit use, although there is a definite hardware/hacker bias (from me, mostly). I would like to encourage all of you users out there to consider writing something and submitting it for publication. I, for one, relly enjoy everything we get and you might even get a whole $25 for your efforts! Subscriptions are available for $25 per 6 issues; $34 gets you a disk every other issue (3 disks). The disks are basically code and such from the issues. Write to us at:
Atari Classics
5507 Langford Court
Concord, CA 94521-1614

Non U.S. rates are higher - write. We currently mail First Class in a protective envelope (I just hate getting a damaged magazine...)

1259. How many 1200XLs were sold

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-05 00:00:00 UTC
From: Jim Lazarenko <jimbo@connect.ab.ca>
Message-ID: <313BF7E8.5764@connect.ab.ca>
Source record: 85484

Just wondering if anyone has an idea of how long the Atari 1200XL unit was sold for, in my neighborhood I only recall seeing a couple. I am tossing around the idea of selling mine, what is a good asking price for that unit nowadays.

Regards,
Jim

jimbo@connect.ab.ca

If you mean Ben Smith's "Bravo Sierra" site, it's
http://www.teleport.com/~bensmith/bscomputers.shtml
There's also Toad Computers at
http://www.toad.net/atari
(I got their printed catalog recently; mostly ST and Falcon, but some 8-bit
stuff.)
If it's something else, post again and if I can't find it, maybe the
web page's owner will reply.

From: Chris_F_Chiesa@cup.portal.com
Message-ID: <150794@cup.portal.com>
Source record: 85488

I recommend Kermit65 as the hands-down best VT100 emulator available for *any* platform, including the PC and the Mac. I've found that most emulators that claim to offer VT100 capability, generally don't offer COMPLETE or entirely CORRECT VT100 emulation. Caveat emptor!

1265. FS/T: Atari 8-bit computer items [03/05/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-05 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4hhkqv$946@cloner3.netcom.com>
Source record: 85490

updated 03/05/96

NOTE: Screen shots of some of these games are available on my
web site.

I have the following Atari 8-bit software and hardware for sale or
trade.

Everything is sold as is. Unless specified, all items have been
tested and are in perfect working order.

Buyer has ten (10) days to send payment, and pays all shipping
costs, which will be sent via U.S. Postal Service. The shipping
cost depends on both the weight of the package and the distance
that it is traveling. Buyer has the choice of either first class
or parcel post (which is slower, but cheaper).

Payment must be made in U.S. funds, by either check or money order,
drawn from a U.S. bank branch. Canadian buyers must send a Canadian
Postal Money Order, payable in U.S. funds. This is the only way I
have found to deal with my friends to the north (my bank is very
picky, but the U.S. Post Office will cash a Canadian Postal M.O.)

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 6.00 Atariwriter
$ 6.00 Basic -- for the 400 and 800
$10.00 Delta Drawing (Spinnaker)
$10.00 Kids on Keys (Spinnaker)

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio

Shack for $7, plus tax. It allows for the connection of both 300 OHM
and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$44.00

*****

LOT #2

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 65XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$34.00

*****

LOT #3

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 130XE COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$59.00

*****

LOT #4

ATARI 1050 (127K) DISK DRIVE, with original power supply, and
one (1) Molex connector cable.

$39.00

*****

LOT #5

ATARI 1050 (127K) DISK DRIVE, with one (1) Molex connector cable.

This disk drive doesn't include the power supply.

$34.00

*****

Although I cannot answer those questions, they are very good, I seem to
recall a technique which was *supposed* to copy Atari disks. I believe that
if you had access to a certain TRS-80 computer (Model III maybe) that it was
able to copy *all* the Atari software. I think this was even the impetus for
the Happy Chip. I was "in touch" with the orginator of the Happy Chip and
often loaned hims some reference material for this development.

Anybody confirm the TRS theory?

MB> Is someone here, could tell me more about it ? Seems to be, that this
MB> DOS will support date/time too.

As ever, Atari completely screwed up when they released the XF551. DOS XE
wasn't ready at the time, so they released it with DOS 2.5 DOS XE went on sale
at a later date. It supported SD, ED and true DD, since the XF551 is a DS/DD
drive.

I believe DOS XE was made available, for free, to those that bought an F551
without it, so long as proof of purchase was forthcoming.

And, yes, it supports TIME/DATE stamping. It's possible to have subdirs using
DOS XE, too.

3/5/96 10:30 PST

Please read the rules at the end of the auction.

Auction Highlights----------

Sears Telegames Super Pong IV (model 6-99737) $18 gaucho
Includes box (worn), warranty card,
"Pong Battery Eliminator" power supply,
all four paddles, and instructions.

Dukes of Hazzard (2600 Best prototype) $30 midnight
No factory label or instructions. Ultra-rare.

Ballblazer (for 5200, by Lucasfilm) $21 tdrake1
New in box! Quite rare.

Systems----------

Atari 5200 (4 port model) $40 phicks
Includes one (working!) CX52 controller,
power supply, CX522 automatic switchbox.

Atari 2600 Jr. $15 <min>
Includes one CX40 joystick, RF cable,
power supply.

Odyssey^2 $20 JFQH33A
Includes orginal box, warranty card, power
adaptor, proprietary output cable, switchbox,
built-in joysticks.

Odyssey^2 $7 <min>
Includes built-in joysticks [cord patched]

Atari 800 Computer $25 scharles
Includes one CX40 joystick, built-in
RF cable, power supply.

Controllers----------

Intellivision II controller $5 <min>

Atari 2600 CX20 Driving Controllers $6 cbutler
Set of 2, for Indy 500.

Atari 2600 CX21 Video Touch Pad $3 JFQH33A
for use with Star Raiders.

Compatible with Kids' Contoller and
Keyboard controllers.

Suncom Tac-3 joystick (2600) $3 alunato
3 buttons, one on stick, 2 on base.

Wico Boss joystick (2600) $3 JFQH33A

Games (loose unless noted)----------

Odyssey^2:
Computer Golf $1 valis1
Electronic Table Soccer {R} $3 valis1
Out of This World/Helicopter Rescue {R} $3 valis1
Smithereens {ER} $5 valis1

Atari 2600:
Basketball (Sears) $2 alunato
Berzerk $1 saad
Centipede $1 JFQH33A
Defender $1 saad
Dig Dug $5 mcg
Dukes of Hazzard <PROTOTYPE> $30 midnight
Miniature Golf <text label> [screwhole] $1 saad
Moon Patrol $5 mcg
Pac-Man $1 saad
Popeye [label mottled, worn] $1 saad
Space Invaders <text label> $1 saad
Star Wars: Empire Strikes Back (Parker Bros.) $3 eawohlstadter
** with instructions **
Star Voyager (Imagic) <text label> $2 saad
Surround <picture label> $1 saad
Swordquest: Earthworld $1 saad
3-D Tic-Tac-Toe <text label> $2 saad
** with instructions **
Venture (Coleco) $1 saad
Word Zapper (US Games) $2 saad

Atari 5200:
Ballblazer [new in box!] {R} $21 tdrake1
Centipede $2 <min>
Defender $3 cel13
Galaxian {w/ overlay} $3 <min>
Joust $3 <min>
Kaboom! (Activision) $4 cel13
Missile Command [writing on label] $2 <min>
Ms. Pac-Man $5 cel13
Pole Position $2 <min>
Realsports Football $2 <min>
Realsports Tennis $3 dahan
River Raid (Activision) $3 gaucho
Super Breakout $1 <min>

Atari 7800:
Donkey Kong [both labels inverted] {R} $2 <min>
Fight Night [label holes] {R} $2 eawohlstadter
Ikari Warriors {R} $5 btr9p
Kareteka $2 eawohlstadter
Realsports Baseball $1 <min>
Rampage (Activision) {R} $10 btr9p

Loose Instructions----------

Odyssey^2:
Alien Invaders-Plus $1 <min>
Freedom Fighters $1 <min>
Game Catalog EL-3328-1 $1 JFQH33A
Game Catalog EL-3380-1 $1 JFQH33A
KC Munchkin $1 <min>
Pick Axe Pete $1 JFQH33A
Showdown in 2100 AD $1 <min>

Auction Rules:

o The most recent auction update is now available on WWW at the following address: http://www.cs.orst.edu/~summers/auction

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on Monday, March 11. After that, highest bidder will be determined through a "going once, going twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders must be paid with a Canadian Postal money order in US dollars. Allow 10 business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be paid by the buyer and will be as follows (Continental US only): Smaller items will be shipped with larger items if possible.

Instructions: $1, USPS (first class)
1-3 carts: $3, USPS (priority mail)
4-6 carts: $4, USPS (priority mail)
7 carts and up: $5, USPS (priority mail)
Controllers: $5, USPS (priority mail)
Systems: $10, UPS (ground)
Large Systems: $13, UPS (ground)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

Source record: 85497

> 4 (mostly our of curiosity). Why didn't rental market develop for 2600 video
> games? Well, at least, I don't remember one.

I can't speak for the rest of the country, but here in Orlando, FL I rented 2600 carts from not one but TWO different stores. One of them was a video rental place with a game section (sound familiar?), but the other one was my favorite place to be as a kid... Video Game World. I got my Colecovision there the first day it was available. They rented for every system around at the time. They had a section set up for each system, with all theur respective cart boxes mounted on the wall next to them. One of these days I'm gonna decorate just like that. :-)

I'd love to receive a copy of your paper when it completed!

Regards,
Scottie

Well, I'm sorry. I agree with you Oscar. I think its rediculous to worry about copyright issues for old Atari software. If one of those companies comes out of the woodwork and is upset, I'm sure that a simple promise not to include there wares would suffice. Even in court, how much could they possibly prove they are losing. I would think they would rather see there work immortalized rather than gone and lost forever.

I have a copy that works fine on a 800XL and 130XE. I had never heard that it
was not supposed to. If you'd like a copy to try, let me know.

1277. lack of PC Xformer Support

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-06 00:00:00 UTC
From: Bill Somrak <cooncat@ncweb.com>
Message-ID: <313DF99E.17ED@ncweb.com>
Source record: 85410

Has anyone else been having trouble getting through to Darek? I've sent many e-mails to him over the past 3 week, asking him to set my downloading privileges on his homepage (I'm a registered user). I haven't heard anything. I've sent him several disk images of Atari .xfd files, with game programs .. all of which either DON'T work, or work poorly ... no comment from Darek. He claims that the PC Xformer has a 60% to 70% compatibility rate ... that up to 70% of Atari programs run on his software ... I've found that the TRUE percent is closer to 8% or 10% ... even when the programs run, there are frequently problems with the display, or the way the joystick behaves, or something else, making the software unusable. I've always tried to work things out directly (personally) with him, rather than posting bulletins. However, since he doesn't seem interested in replying to my repeated e-mails, I was left with no choice. I know that I've read other msgs here of other users that have had similar experiences. I think Darek need to concentrate on programming, and get someone who can deal with customers on a one to one basis.

Bill
(16 yr Atari 8 bit user)

>--
> EricW

Some disks can create a problem if they were formatted on another machine. Try using a magnet and going in circles over the disk on both sides to erase it, then try it again. The switches in the back should both be set to the left to make it drive one. You must boot with a disk that include DOS system files in order to have disk access for virtually any program. To save a program from Basic, you must have booted with a DOS disk in the drive. Then, from Basic, type

SAVE "D:FILENAME.EXT"

replace FILENAME.EXT with your own filename.

To format a disk from Basic, you also must have booted with a DOS disk. Then you can format a disk with this command:

XIO 254,#1,0,0,"D:" to format single density with DOS 2.5
XIO 253,#1,0,0,"D:" to format enhanced density with DOS 2.5

I am not sure what other DOS's may do with this command. It is usually better to type DOS from Basic and use selection I from the menu to format.

3/6/96 14:15 PST

Please read the rules at the end of the auction.

Auction Highlights----------

Sears Telegames Super Pong IV (model 6-99737) $18 gaucho
Includes box (worn), warranty card,
"Pong Battery Eliminator" power supply,
all four paddles, and instructions.

Dukes of Hazzard (2600 Best prototype) $35 cbutler
No factory label or instructions. Ultra-rare.

Ballblazer (for 5200, by Lucasfilm) $21 tdrake1
New in box! Quite rare.

Systems----------

Atari 5200 (4 port model) $40 phicks
Includes one (working!) CX52 controller,
power supply, CX522 automatic switchbox.

Atari 2600 Jr. $15 <min>
Includes one CX40 joystick, RF cable,
power supply.

Odyssey^2 $20 JFQH33A
Includes orginal box, warranty card, power
adaptor, proprietary output cable, switchbox,
built-in joysticks.

Odyssey^2 $7 <min>
Includes built-in joysticks [cord patched]

Atari 800 Computer $30 cbutler
Includes one CX40 joystick, built-in
RF cable, power supply.

Controllers----------

Intellivision II controller $5 <min>

Atari 2600 CX20 Driving Controllers $6 cbutler
Set of 2, for Indy 500.

Atari 2600 CX21 Video Touch Pad $3 JFQH33A
for use with Star Raiders.

Compatible with Kids' Contoller and
Keyboard controllers.

Suncom Tac-3 joystick (2600) $3 alunato
3 buttons, one on stick, 2 on base.

Wico Boss joystick (2600) $3 JFQH33A

Games (loose unless noted)----------

Odyssey^2:
Computer Golf $1 valis1
Electronic Table Soccer {R} $3 valis1
Out of This World/Helicopter Rescue {R} $3 valis1
Smithereens {ER} $6 pjpettis

Atari 2600:
Basketball (Sears) $2 alunato
Berzerk $1 saad
Centipede $1 JFQH33A
Defender $1 saad
Dig Dug $5 mcg
Dukes of Hazzard <PROTOTYPE> $35 cbutler
Miniature Golf <text label> [screwhole] $1 saad
Moon Patrol $5 mcg
Pac-Man $1 saad
Popeye [label mottled, worn] $1 saad
Space Invaders <text label> $1 saad
Star Wars: Empire Strikes Back (Parker Bros.) $5 cbutler
** with instructions **
Star Voyager (Imagic) <text label> $2 saad
Surround <picture label> $1 saad
Swordquest: Earthworld $1 saad
3-D Tic-Tac-Toe <text label> $2 saad
** with instructions **
Venture (Coleco) $1 saad
Word Zapper (US Games) $2 saad

Atari 5200:
Ballblazer [new in box!] {R} $21 tdrake1
Centipede $2 <min>
Defender $3 cel13
Galaxian {w/ overlay} $3 <min>
Joust $3 <min>
Kaboom! (Activision) $4 cel13
Missile Command [writing on label] $2 <min>
Ms. Pac-Man $6 dahan
Pole Position $2 <min>
Realsports Football $2 <min>
Realsports Tennis $3 dahan
River Raid (Activision) $3 gaucho
Super Breakout $1 <min>

Atari 7800:
Donkey Kong [both labels inverted] {R} $2 <min>
Fight Night [label holes] {R} $2 eawohlstadter
Ikari Warriors {R} $5 btr9p
Kareteka $2 eawohlstadter
Realsports Baseball $1 <min>
Rampage (Activision) {R} $10 btr9p

Loose Instructions----------

Odyssey^2:
Alien Invaders-Plus $1 <min>
Freedom Fighters $1 <min>
Game Catalog EL-3328-1 $1 JFQH33A
Game Catalog EL-3380-1 $1 JFQH33A
KC Munchkin $1 <min>
Pick Axe Pete $1 JFQH33A
Showdown in 2100 AD $1 <min>

Auction Rules:

o The most recent auction update is now available on WWW at the following address: http://www.cs.orst.edu/~summers/auction

o In case of ties, the first bid received is the bid accepted.

o The first part of the auction will end on Monday, March 11. After that, highest bidder will be determined through a "going once, going twice, gone" format, with each step in the process being a day long.

o Bids will be made in increments of $1.00 for items under $20 and increments of $2.00 for items $20 and over.

o If you bid, you are expected to buy. BIDDERS FAILING TO FOLLOW THROUGH ON A PURCHASE WILL HAVE THEIR NAMES POSTED TO THE NET AS A WARNING TO OTHER SELLERS!

o The auction is open to buyers in the United States and Canada.

o Payment is by check or money order. No CODs please. Canadian orders must be paid with a Canadian Postal money order in US dollars. Allow 10 business days for checks to clear.

o Shipping and handling is above and beyond the amount bid and will be paid by the buyer and will be as follows (Continental US only): Smaller items will be shipped with larger items if possible.

Instructions: $1, USPS (first class)
1-3 carts: $3, USPS (priority mail)
4-6 carts: $4, USPS (priority mail)
7 carts and up: $5, USPS (priority mail)
Controllers: $5, USPS (priority mail)
Systems: $10, UPS (ground)
Large Systems: $13, UPS (ground)

o In the event of a sale not going through, the item will go to the next highest bidder.

o All items have been tested and are in working condition, except where noted.

Yes, I can tell you something about it... CSS is your best source for
the ROM and hardware. Basically, you must tell the drive that it now
has 80 tracks instead of 40. Change a few timing parameters. Simple.
Bob Woolley

1284. Free 130XE (1st come 1st serve)

>wouldn't run.

I happen to have the Gorf cartridge. It will only run on an 800.
Appearantly it uses some stuff of the old OS that has moved in the
XL OS. I have not tried to figure out what exactly. As far as I know,
there are more cartridges by Roklan that will not work on a XL.
The Gorf cartridge lacks the Galaxians part, which I found to be the
most ejoyable on the arcade version. Atari Galaxians will not allow
your ship to go up and down, which is essential for killing these
dreaded creatures from outer space. Still looking for a good Galaxians.

1286. DOS XE - Whats it ?

Message-ID: <4hjfi8mmf1@mhadf.production.compuserve.com>
Source record: 85500

If memory serves, Rothberg actually designed the arcade version of "Battlezone." There was some story behind this, but I don't recall the exact details. Rothberg left Atari over creative differences because of the game, something about having it designed to military specs, or something of that nature. I do recall that Atari had made a $15,000 version of the game for the U.S. military (for training purposes), and I think that's where the conflict came from. The game was even profiled on ABC News way back when.

There is a program for the Atari 8-Bit to allow you to copy Cartridges to 5.25 disk as I have one.

It does not always work if i remember correctly but many moons ago i did get some stuff onto disk with it.

At present however it is located somewhere in my loft !! I'll let you know more when i find the the disk with it on.

I can't help you with where you might be able to download from however.

1297. Alternate Hard Disk Interface

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-07 00:00:00 UTC
From: Michael Ellis <michael@anest4.anest.ufl.edu>
Message-ID: <4hmt1d$stk@no-names.nerdc.ufl.edu>
Source record: 85422

I have been doing some thinking about other ways to hook a hard disk up to an 8-bit (other than via the PBI, that is). It seems to me that it should be possible to use the cartidge port to do memory-mapped I/O to a hard disk interface. If this is possible, it means that people would be able to hook up hard disks to their 800s and 1200XLs -- what a concept.

Anyone have any thoughts on this?

-Michael Ellis

Err, unless you've tried every single program ever written for the
Atari, you can't say anything about what the "TRUE" success rate is.

You can only say what your own success rate has been, and Darek can
only say what his success rate has been. It comes down to who has the
most complete and representative test suite. My guess is that Darek
does, but note that he gives a ceiling on the number, as any company
marketing department would do. You are probably looking at a more
limited number and type of program than he is.

I don't know whose number is closer (probably somewhere between the
two), but be careful about claims of absolute truth.

And if you really think you can do better than Darek has, I'm sure
David Firth would love to have your help with the Atari800 emulator
for Unix/Amiga/VMS.

I've had the same problems, but it's all been sorted out now. Apparently something to do with a mail server. Try mailing him through the www page, that's how I got a response!

> the software unusable.

I've had similar problems, but I'm still using a real one as well. The XFormer is about as good as it'll get IMHO, as the Atari is a very powerful machine (compared with, say Spectrum or C64) - You don't see any Amiga emulators either, do you? Same design team for the chips! Difficult to emulate.

> I think Darek need to concentrate on
> programming, and get someone who can deal with customers on a one to one
> basis.

It's a good idea, but it's nice to talk to "the man"

Try the 3.31 upgrade. Still not perfect but getting there. If I had one wish for Xformer it'd be better POKEY emulation. I couldn't do any better though, so I'll not throw stones.

PS. I've had some stuff work with earlier versions of the XFormer and not more recent ones, try an earlier version.

It runs on mine. Try a "translator" program, maybe your OS is a different revision, or it could be a happy chip in the drive making the protection fail.

How 'bout calling it the "Classic Atari Software Foundation"? Sounds better than "Ancient" to me. Ancient makes me feel too old :-). I was almost 23 when I got my first 800XL when they were first introduced way back when.

Yes, you do. Have a look at
http://www-users.informatik.rwth-aachen.de/~crux/uae.html

It's the homapege of the Un*x Amiga Emulator. There's also a MAC-version available.
I've tried it on my Linux-Box. Looks promising, but it's also quite slow right
now.

Best wishes,

Sdinitto@tiac.net (sdinitto@tiac.net) wrote:
: Correct me if I am wrong, but the atari 800 seems to me a more
: sophisticated machine then the 2600. Why is it I heard that an atari 2600
: emulator on a DX266 runs about half the speed at the original, where as
: the 800's pc emulator on a dx2 runs aboutthree times as fast? Any
: technical explanation would be appreciated.

I offer two potential explanations.

1. Hardware documentation was probably considerably better for the 800
than for the 2600--the thing had expansion capabilities whereas the 2600
really wasn't intended for such grandiose plans. (Of course, there WERE
tape drives and other goofy things.)

2. There's an awful lot of VERY timing-sensitive stuff going on inside a
2600. The discussion would be more enlightening on a 2600-dedicated
newsgroup, but suffice it to say that most Atari games were made possible
through exceedingly difficult hardware hacks.

This is why, for example, Apple II emulation runs faster than C-64
emulation. The 64 has more wild and weird "changes in the middle of a
scanline" things going on.

>2600 cartridge into another computer!

That's left to companies like Activision that have a bunch of old 2600 source code laying around. Their 2600 Action Pack for the PC includes a 2600 emulator and several classic Activision games. Transferring the game from cart to PC is no big deal when you have the source code that made the cart in the first place.

1314. PC Xformer 3.5 and PC Xformer Cable now shipping

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-08 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <4hopa5$qrb@news1.halcyon.com>
Source record: 85439

This week I began shipping out PC Xformer 3.50 upgrades along with the new PC Xformer 8-bit peripheral cables. These cables are fully compatible with the old ST Xformer cables, and can be used both with PC Xformer on the PC, and on the Atari ST with ST Xformer. With the cable, any Atari 8-bit peripheral such as an 810 or 1050 drive or color plotter can be plugged in to your PC or ST and used with the emulators. No need to find an 8-bit computer. The cable connects the peripheral directly.

The cables cost $25 and are available to all registered users of PC Xformer 3.0 and higher. The price includes the PC Xformer 3.50 upgrade and free shipping within North America. For complete product information see our web page at http:/www.halcyon.com/brasoft

>address computers.
>Since the only way to read a news post is to copy it in some way, that
>is not considered a violation of copyright.

This is indeed what it would seem to me. In addition, USENET being
basically a store and forward message system, you taking the copy of a
message from your hard drive and redistributing it to someone else
would be part of the intended use of the USENET system. And, under
other provisions of the copyright law, I am allowed to quote from
articles for the intent of editorial comment, ie -- the quoted portion
of this message thread above.

Now, backing up the message to an archive may indeed move to the realm
of the Fair Use portion. As I recall, Fair Use covers backups of all
types in computer systems ... ie as owner of a software package, for
example, I am intitled to make a backup copy to guard against
destruction thru computer malfunction.

Now the grey area would be .. suppose I allow access to my backups to
third parties, possibly just as a result of the general openness of
computer systems and such. For example .. I am allowed to keep backup
copies of my personally owned software ... if I choose to keep those
backups under the FTP accessible file tree portion of my Internet
provider so that I may be able to obtain access to them from whereever
I might be (work, home, on the road), this would also be covered by

Fair Use. But if my Internet provider allows public access to that
file area, where does the liability lie, if there is any?

I've decided to try a go at an online Atari magazine. Right now I need a couple of things:

-I need some feedback on the layout. You can view a skeleton issue at http://www.kenton.com/users/gozar/memopad/memopad.html An ascii version will become available once everything starts rolling.

-WRITERS!!! Please check out the various departments on the page mentioned above. If you would like to write for any of them, or if you have an idea that doesn't fit into anything, let me know.

PLEASE check out the page above, and let me know of anything that I need to change, or any suggestions to improve it!

I've set up an address: atari8@ibm.net for this, so all feedback should be sent to it.

Fair point.... BUT

1) I don't work with Unix/Linex.
2) The really powerfull unix boxes are, well, REALLY powerful.
3) I don't want a unix box.
4) There isn't one for the PC coz it probably can't handle it, which is the point I was making.

>I read somewhere that on some disks the "bad" sectors were double density
>sectors, which an 810 or 1050 drive could not read.

A 1050 could read double-density sectors. What I'm still perplexed about is the fact that there were different types of dead sectors, and it was possible for the software to distinguish between them - even though the basic premise of the dead sector was that it was unreadable. If the software didn't find the specific type(s) of dead sector it was expecting, the program wouldn't load.

The Archiver showed up different types of dead sector with different symbols, and one of Happy's boasts was that it would copy "any type of bad sector, duplicate sector numbers or interleave". I'd still love to know exactly what they were and how they worked!

>The hardware is easy to do.. Its just the software part that gives me
>problems..
>

Indeed, the software would be harder than the hardware. Still, it wouldn't be terribly difficult (no more difficult than writing any other driver) and some really neat stuff could be done. I'd install some ROM software in the interface that would automatically install the hard disk driver, optionally load some setup screen, and then begin the boot process.

I guess the biggest problem would be with software that wants to use the cartidge RAM area. Any programs that did this would fail unless the hardware (interface) was designed well enough to be switched ON or OFF as needed; this compatiblity aspect would be the hard part.

I beleive Atari did away with the NMI reset on the XL/XE series. The reset key on the 800 did really generate an NMI, and if you debug the 800 NMI and reset OS code, you will see where it gets trapped. This however has the unfortunate consequence that if you are in a true "hard lock" the cpu will not respond to the NMI (I remember those fond 800 days and the basic A bug with the dead reset key). I am almost positive the reset key on the XL/XE triggers the reset line on the cpu, so it allows you to recover from most (but not all) lockups...

I'd be willing to bet that Activision did NOT have the source code for
those games in its original form. Activision basically lost everything
it had previously done in major changes during the late 80s.

For example, when they went to put together the 64 pack, they were on the
comp.sys.cbm newsgroup asking for cracked copies of their own software,
simply because they couldn't find anything they could use on the emulator
amongst the archives.

1323. Pristine U/S Doubler 1050

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-09 00:00:00 UTC
From: b.poehland@genie.com
Message-ID: <199603091949.AA042120949@relay1.geis.com>
Source record: 85448

I have one last mint-condition 1050 disk drive I'd like to sell.

This is a U/S Doubler 1050 in cosmetically excellent condition, in the original Atari carton w/all original packaging materials. DOS 2.5, Atari manual & ICD manual included. Accessories include transformer & SIO cable. Also included with this deal are the original Atari chips removed when the ICD U/S Doubler chips were installed. (Most people are unaware that if a U/S Doubler 1050 develops a problem, you must replace the original Atari chips in order to run the Atari test software; the Atari test software will fail or give errors if you run it with the ICD chips installed.)

Price is $45, NO CHARGE for shipping. USA buyers only.

I can throw in SpartaDOS 3.2d (disk & manual) for an extra $5.

They had no source code, they didn't even have cartridges! Months before
release, Activision requested help in getting sealed games. (to create
new box art, instructions, etc.)

Activision is a different company from those days.

Hold RESET.
Insert a cartridge.
Pray (unless you have a 1200XL).
Let go of RESET.
Let it start to boot.
Hold RESET.
Remove cartridge.
Let go of RESET.
It should reboot.

Sometimes it buggers up extended mem. tho (never on my 1200XL I don't think).

Cool :)

Disclaimer: This is probably not a very nice thing to do to your little 8bit.

I've often seen my XL lock up so that when you press Reset it says
"READY", and you can type anything, but when you hit return it locks up
again.

Well, Rob, I have SIXTEEN YEARS worth of Atari 8 bit software .. If I don't have
everything ever written for the Atari 8bit, then its pretty darn close! I've tried
simple basic programs, basic games, basic games with usr calls, M/L games and
commercial games ... is that enough of a cross-section??? Now is ONLY the
commercial games (like PacMan, Ms. PacMan, Atari Star Raiders, Choplifter, etc) wouldn't
run, and everything else DID, then I'd say Darek did his homework. However, basic games
run "buggy", and most of the M/L games (meticulously typed in from Analog, Antic and
Compute!
magazines ... a LONG time ago) DON'T run. All I can tell you is, if you are going to buy
PC Xformer, and expect to play your old Atari Favorites on it ... better think again. You
are better off leaving an Atari set up (I have TWO set up, along with this 486dx-4 120mhz).

I WISH that 60 to 70% of ALL Atari Software worked with Darek's Xformer, but the simple
truth
is, from what I'VE EXPERIENCED, it is more like 8 to 10% ... at best. I'm not saying I can
do
better ... I'm just for truth in advertising!

Bill

1331. Atari BBS List: 96-03-10 UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-10 00:00:00 UTC
From: oscar@primenet.com
Message-ID: <4i0ac1$2qr@nnrp1.news.primenet.com>
Source record: 85357

I've compiled the replies I received for my query on existing BBS's which support the Atari 8bit. The list is in 40-column format in order to accomodate those of us who will be using an 8bit to view it. I've removed "BBS" from the BBS names in order to conserve space.

Thanks to everyone who replied. Sorry that I haven't had a chance to reply personally to those of you who sent email. Please keep me informed with updates to the list and I'll post revisions as necessary. In particular, if one of the BBS's is within your local calling area, please give them a call and let me know whether they're currently operational.

Also, I just found out (by reading the FAQ...) that Rick Detlefsen is putting together a BBS list as well. Does anyone know if he completed it? If so, we can just merge the two lists together.

The format of the individual entries is below. Note that each entry uses four lines. "Type" indicates the type of hardware used to run the board. "Status" is whether the board was up or not the last time it was checked, which was on the "status date". I assume the remaining fields are self-explanitory.

In general I agree with you. I'm not going to get excited about a 29
line post, though. I DON'T mean to open the floodgates to binaries--
I know it's a problem for those with slow connections. But I think we
can stand a few exceptions like the one here.

3/11/96 8:30 PST

Please read the rules at the end of the auction.

Auction Highlights----------

Sears Telegames Super Pong IV (model 6-99737) $18 gaucho
Includes box (worn), warranty card,
"Pong Battery Eliminator" power supply,
all four paddles, and instructions.

Dukes of Hazzard (2600 Best prototype) $40 midnight
No factory label or instructions. Ultra-rare.

Ballblazer (for 5200, by Lucasfilm) $26 tdrake1
New in box! Quite rare.

Systems----------

Atari 5200 (4 port model) $40 phicks
Includes one (working!) CX52 controller,
power supply, CX522 automatic switchbox.

Atari 2600 Jr. $15 cbutler
Includes one CX40 joystick, RF cable,
power supply.

Odyssey^2 $20 JFQH33A
Includes orginal box, warranty card, power
adaptor, proprietary output cable, switchbox,
built-in joysticks.

Odyssey^2 $7 <min>
Includes built-in joysticks [cord patched]

Atari 800 Computer $30 cbutler
Includes one CX40 joystick, built-in
RF cable, power supply.

Controllers----------

Intellivision II controller $5 <min>

Atari 2600 CX20 Driving Controllers $6 cbutler
Set of 2, for Indy 500.

Atari 2600 CX21 Video Touch Pad $3 JFQH33A
for use with Star Raiders.

Compatible with Kids' Contoller and
Keyboard controllers.

Suncom Tac-3 joystick (2600) $3 alunato
3 buttons, one on stick, 2 on base.

Wico Boss joystick (2600) $3 JFQH33A

Games (loose unless noted)----------

Odyssey^2:
Computer Golf $1 valis1
Electronic Table Soccer {R} $3 valis1
Out of This World/Helicopter Rescue {R} $3 valis1
Smithereens {ER} $6 pjpettis

Atari 2600:
Basketball (Sears) $2 alunato
Berzerk $1 saad
Centipede $1 JFQH33A
Defender $1 saad
Dig Dug $5 mcg
Dukes of Hazzard <PROTOTYPE> $40 midnight
Miniature Golf <text label> [screwhole] $2 kneel95
Moon Patrol $5 mcg

1337. WTB/LTB: Atari 800 complete system

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-11 00:00:00 UTC
From: jeffryj@azstarnet.com
Message-ID: <4i01bl$l8n@news.azstarnet.com>
Source record: 85362

Hello!

I would like to buy all of the following:

Atari 800 -- base unit (cpu), ac adapter
Atari 800 TV adapter
Atari 800 disk drive, necessary cables, etc.
Atari 800 keyboard
Atari 800 Joystick(s)
Atari 800 manuals
--- if possible, below items -----
Atari 800 cartridges/disks: Basic, DOS, Space Dungeon, maybe some other games

basically a complete system
If you can sell me any o the above, leave me an e-mail message at:

jeffryj@azstarnet.com

Thanks!
Jeffry Johnston
jeffryj@azstarnet.com..
I also hang out as calamari in #rgvc on IRC..msg me!

Check the Head possibly needs cleaned, also the spring you
replaced into position..Check the tension on it should have a
nice round loop and put pressure on the arm that floats above the
disk..also check the pressure pad on that same arm..good luck..

3/12/96 10:00 PST

NOTICE: Auction is now in the 'going once, twice, gone' phase.

Please read the rules at the end of the auction.

Auction Highlights----------

Sears Telegames Super Pong IV (model 6-99737) $18 gaucho
Includes box (worn), warranty card, going TWICE
"Pong Battery Eliminator" power supply,
all four paddles, and instructions.

Dukes of Hazzard (2600 Best prototype) $40 midnight
No factory label or instructions. Ultra-rare. going TWICE

Ballblazer (for 5200, by Lucasfilm) $26 tdrake1
New in box! Quite rare. going TWICE

Systems----------

Atari 5200 (4 port model) $40 phicks
Includes one (working!) CX52 controller, going TWICE
power supply, CX522 automatic switchbox.

Atari 2600 Jr. $16 dinsdale
Includes one CX40 joystick, RF cable, going TWICE
power supply.

Odyssey^2 $20 JFQH33A
Includes orginal box, warranty card, power going TWICE
adaptor, proprietary output cable, switchbox,
built-in joysticks.

Odyssey^2 $7 <min>
Includes built-in joysticks [cord patched]

Atari 800 Computer $30 cbutler
Includes one CX40 joystick, built-in going TWICE
RF cable, power supply.

Controllers----------

Intellivision II controller $5 <min>

Atari 2600 CX20 Driving Controllers $6 cbutler
Set of 2, for Indy 500. going TWICE

Atari 2600 CX21 Video Touch Pad $3 JFQH33A
for use with Star Raiders. going TWICE
Compatible with Kids' Contoller and
Keyboard controllers.

Suncom Tac-3 joystick (2600) $3 alunato
3 buttons, one on stick, 2 on base. going TWICE

Wico Boss joystick (2600) $3 JFQH33A
going TWICE

Games (loose unless noted)----------

Odyssey^2:
Computer Golf TWICE $1 valis1
Electronic Table Soccer {R} TWICE $3 valis1
Out of This World/Helicopter Rescue {R} TWICE $3 valis1
Smithereens {ER} ONCE $10 JCork

Atari 2600:
Basketball (Sears) TWICE $2 alunato
Berzerk TWICE $1 saad
Centipede TWICE $1 JFQH33A
Defender TWICE $1 saad
Dig Dug TWICE $5 mcg
Dukes of Hazzard <PROTOTYPE> TWICE $40 midnight
Miniature Golf <text label> [screwhole] TWICE $2 kneel95
Moon Patrol TWICE $5 mcg
Pac-Man TWICE $1 saad
Popeye [label mottled, worn] TWICE $1 saad
Space Invaders <text label> TWICE $1 saad
Star Wars: Empire Strikes Back (PB) TWICE $5 cbutler
** with instructions **
Star Voyager (Imagic) <text label> TWICE $2 saad
Surround <picture label> TWICE $1 saad
Swordquest: Earthworld TWICE $2 JFQH33A
3-D Tic-Tac-Toe <text label> TWICE $3 LEFTYLE5
** with instructions **
Venture (Coleco) TWICE $1 saad
Word Zapper (US Games) TWICE $2 saad

Atari 5200:
Ballblazer [new in box!] {R} TWICE $26 tdrake1
Centipede $2 <min>
Defender TWICE $3 cel13
Galaxian {w/ overlay} $3 <min>
Joust $3 <min>
Kaboom! (Activision) TWICE $5 LEFTYLE5
Missile Command [writing on label] $2 <min>
Ms. Pac-Man TWICE $7 cel13
Pole Position $2 <min>
Realsports Football $2 <min>
Realsports Tennis TWICE $3 dahan

River Raid (Activision) TWICE $3 gaucho
Super Breakout TWICE $1 saad

Atari 7800:
Donkey Kong [both labels inverted] {R} TWICE $3 mmccoy
Fight Night [label holes] {R} TWICE $2 eawohlstadter
Ikari Warriors {R} TWICE $5 btr9p
Kareteka TWICE $2 eawohlstadter
Realsports Baseball TWICE $2 mmccoy
Rampage (Activision) {R} TWICE $10 btr9p

Loose Instructions----------

Odyssey^2:
Alien Invaders-Plus TWICE $1 Ralph
Freedom Fighters TWICE $1 Ralph
Game Catalog EL-3328-1 TWICE $1 JFQH33A
Game Catalog EL-3380-1 TWICE $1 JFQH33A
KC Munchkin TWICE $1 Ralph
Pick Axe Pete TWICE $1 JFQH33A
Showdown in 2100 AD TWICE $1 Ralph

1344. Re: lack of PC Xformer Support

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-12 00:00:00 UTC
From: Lawrence Staveley <Lawrence@kwll.demon.co.uk>
Message-ID: <37226648wnr@kwll.demon.co.uk>
Source record: 85369

> > Yes, you do. Have a look at
> > http://www-users.informatik.rwth-aachen.de/~crux/uae.html

Ok, been there now. Thanks!

I think it supports BOTH our arguments.

1) It supports your argument that Amiga emulation is possible, and I gladly bow down to your knowledge in the face of facts..... It does emulate an Amiga.

However....

2) UAE/Amiga emulation by UAE is worse that XFormer/XL emulation.
(obviously, being 16bit, custom silicon, etc, etc...)

The UAE is still not fully running under DOS, and the author states that it runs five times slower than a stock a-500, making it pretty useless for games, demos, etc.

My point was that Amiga emulation on the PC (at present) would be impossible/not worth the effort, and UAE seems to justify that claim. Don't expect to play Battle Squadron on your PC anytime soon....

Lets walk before we run, eh? I'll not expect a 100% Amiga emulator before a 100% XL emulator. C'mon Darek, don't prove me wrong again ;-)

"I can't see the solution - Through this state of confusion....."

Well, not really. Actually, I am an old 8-bitter who has returned.
In fact, I bought my old XEGS back from someone (unfortunately, the
XF551 has died :-(). I just thought I'd post a quick messege
and say that it feels really good to have my machine back.
The games are still a blast (especially Lode Runner). Next on
my agenda is to grab a copy of Flickerterm, get an 850 or P:R Interface
and get the 8-bit on the Net. It has been quite a few years since
I've kept on on 8-bit news so I am sure that I have missed some
exciting products. I can't wait to catch up.

1346. Re: What *were* dead sectors?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-12 00:00:00 UTC
From: classics@nacs.net
Message-ID: <4i3cgg$8u0@wariat.wariat.org>
Source record: 85371

s (m) writes:
: Dead Sectors were sectors that were either:
: (A) Totally unreadable at all. This was the first type utilized in
: protecting software. An easy way to remove this protection was to look
: for the bad sector read, then make it read sector 0 instead. The 810
: chipset returned a sec read of sec #0 as a bad sector.

Trying to read sector 0 would return a NAK. Your sorta right about the
'dead' sectors. 'Bad' sectors are actually just sectors that are
not there, or nmbered incorrectly. Because of the way the Atari drive
os reads the disk, any sectors outside the normal range of 1-18 are
not readable.

So if the track was formatted: 2 3 4 5 FF 6 7 8 9 A B C D E F 10 11 12 13

Sector 1 would be 'bad' since the drive would never find it, and sector
FF could never be read by a stock 1050.

: (B) Custom format sectors. These sectors read "bad" in any disk dupe
: but actually contained data. Commonly seen in adventure international
: programs and almost every other mid-life atari game. Introduced to
: combat people with the "slow Down" method. Assembly language hack:
: copy disk w/o bad sector. Boot disk. See what program does when not
: find protection. Hack around. (OMNIMON! to the rescue)

The drive returns it buffer contents even when it cant find the
sector. Any data returned on a sector not found is just from the
last operation. The only way to really tell whats going on it to
read the 177x controller status after the read.

: (C) Custom format tracks. THESE WERE (are) a bitch to copy!! Not
: copyable by the archiver 1.2 but supposedly by the 2.0 (did gustafson
: ever release it?) Happy 7.0+ was able to, but only with the slow down
: mod for the 1050 happy. the 810 happy you had to slow it down
: manually, not possible on later model 810's. These tracks had
: duplicate sector #'s, and would read different data everytime you read
: the track. The program would load sectors, and watch the data. If your
: drive speed was off, it wouldnt even boot. Fortunately, also able to
: be hacked around with (b) method.
:

These trackes often looked like:

FF FF FF FF FF FF FF FF FF FF FF 01 FF FF FF FF FF FF FF FF FF FF 01

These would overwhelm the track buffer in the archiver/happy and
they would lose the all important sector 01, or lose one of the

sector 1's.

There are 2 types of 'changing per read' protection. One is a true random return, which is often called a 'weak' sector. These can easily be created by slicing the disk w/ a knife. They are a result of the magnetic 'bubbles' in the data field being so messed up they look diffrent each time.

The other was 'phantom' sector protection, a favorite of companies like Datasoft and EA. These tracks might look like the above (sector 1 could be a phantom, w/ diffrent data in each sector 1), or:

1 2 3 4 1 5 6 7 1 8 9 A 1 B C D 1

You see there are 5 copies of sector '1'. If you write seperate data to each sector '1' w/ a special program like a disk duplicator, you get diffrent images for sector '1' each time because as the disk spins, its difficult (but NOT impossible) to tell which sector '1' will pass under the read head at the time of the request.

EA had it worked out pretty nice, some just make sure its there. EA was clever enough to make LONG tracks that included all the normal sectors, and then an extra 'phantom'. This way the disk looked normal and would copy error free w/ a disk duplicator, but wouldnt run because the phantom was missing.

: With the Omnimon tool, the average time to crack a disk was less than
: 10 minutes! w/o it, who knows???

: Was this more than you wanted to know????

Not enough, gimmie more! :)

Steve

1347. Re: Atari 2600 emulator

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-12 00:00:00 UTC
From: classics@nacs.net
Message-ID: <4i3d40$8u0@wariat.wariat.org>
Source record: 85372

Jason Compton (jcompton@flood.xnet.com) writes:
: Michael Ellis (michael@anest4.anest.ufl.edu) wrote:
:
: : That's left to companies like Activision that have a bunch of old 2600
: : source code laying around. Their 2600 Action Pack for the PC includes
: : a 2600 emulator and several classic Activision games. Transferring the
: : game from cart to PC is no big deal when you have the source code that
: : made the cart in the first place.
:
: I'd be willing to bet that Activision did NOT have the source code for
: those games in its original form. Activision basically lost everything
: it had previously done in major changes during the late 80s.

Your right. They contacted a major classic games dealer in order to
re-obtain all thier released titles. I believe they have an Oink and
Bridge of mine :)

As for the notes on programming, its VERY hard. In addition to all the
6502 CPU emulation, the 2600 literally DRAWS the video signal to the
screen line by line. Very difficult to emulate properly, and if the
timers (which you must also maintain) are off by even *1 CYCLE* _MOST_
games WILL NOT RUN properly.

My dos native 2600 emulator, written in mostly assembler still only gets
10-20 fps after much tweaking. Im going to have to do a major rewrite
to get above 20fps w/ sprites. (No its not ready for testing yet :)

> Atari Xevious

>I know I've played both but I don't remember if they were on cart or disk.
>I'm not sure if Berzerk was an Atari game or not either.

Both are 5200 games that were pirated onto disk for the Atari 8 bit computers. Xevious existed only as a prototype. I have both on disk. Xevious sounds better than any other version but it looks horrible. Berzek looks and sounds good.

Subject: Super Archiver Drives still available

On 29 Feb 1996 rbmier@winternet.com (Rich Mier) Wrote the following
in response to the question "there ANY way to make a backup of
an EA disk?" :
>
> You need the Super Archilver AND the BITWriter. That is the only
> way I know of. Track 3 is 36 full sectors and the BITWriter is the only
> Hardware Mod. able to handle it. NOW, the last I heard, Bob Puff is
> sold out and won't make any more unless is 'enough' orders for them.
> How many 'enough' is I don't know. The Super Archiver is just a Software
> upgrade to the 1050 Archiver.

I called Bob Puff myself today and asked if it was true. He said that he
had "a bunch of them". Several other people had called him with the same
question.

He asked me to put an end to te rumor.

"Bob Puff has Atari 1050 disk drives with the Super Archiver modification
avaiable now." There. I said it. I hope that this sets the record
straight.

I am not aware that he EVER "...sold out...".

Whilst reading the usual rubbish I find here, Rob C Moellering wrote something
interesting to All about HELP: Need transfer from Atari format to text file:

Hello Rob,

RCM> I have a 5.25" floppy with a mailing list on it that I need,
RCM> I'm willing to pay someone to help me out with this, but not

If you don't get help locally, and don't mind shipping the disk across the
Atlantic, I can do it for you, with ease.

Best bit: I'd do it for _no_ fee.

_

Error 180 in Mydos is "Not a binary load file". Maybe it's a Basic program?

Maybe it was one of those programs with Atari and Commodore versions on
the same side of the disk. Then the backup software wouldn't be able to
read the Commodore parts, but you didn't need to copy those anyway.

1356. Atari 8-bit carts

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-13 00:00:00 UTC
From: krieg@miller.cs.uwm.edu
Message-ID: <4i79di$ibp@uwm.edu>
Source record: 85381
Cross-posted to: comp.sys.atari.8bit,rec.games.video.classic,rec.games.video.atari

I am updating my list of all carts available for the Atari 8bits, and I would appreciate some help. Here are some specific carts I am trying to verify the existence of or find more information on.

Atari Berzerk
Atari Xevious

I know I've played both but I don't remember if they were on cart or disk. I'm not sure if Berzerk was an Atari game or not either.

Atari Blast 'Em

This is a rumored XEGS game but I've never come across anyone who has it.

Atari Kangaroo

Were prototype carts made of this? I know about the bootleg file version.

Atari Macro Assembler

Was this ever released on a cart?

Atari RX8028 Soccer

I have an Atari catalog with this in it (along with a screen shot), yet I've never seen one. Anyone have it?

Atari RX8037 Star Trux
Atari Superman III
Atari Super PILOT (programming language)
Atari CA400201 XE Demo cart (4 games)

I don't know anything about these. They were taken from someone else's list which indicated them as never released. Were prototypes made?

Big Five Scraper Caper

Was there a cart version or only a disk?

Parker Bros. Montezuma's Revenge

I have the 16K disk version and I've played the 32K disk version as well. Was the 16K version made into a cart?

Parker Bros. Mr. Do's Castle

I've seen this on other lists but as far as I know this game was never coded for the Atari 8bits. (Someone please prove me wrong!) Is there some remote chance a prototype exists?

Frogger II: Threedeep

Who released this cart, Parker Bros. or Sega?

Synapse Encounter
Synapse Zeppelin

Were these released on cart or only disk?

Bumper Bash
Micro Maestro
Spider City

Any idea who released these carts?

Finally, anyone know of a cart released by Tensor Technologies? If so, what was it?

Thanks for any help.

In article <4i5knh$1mn8@saba.info.ucla.edu> you write:

>Can someone please remind me what error 180 is, this is when trying to
>load a game off from DOS.
>

MYDOS - Invalid file structure for loading memory.*
DOS-XE- Invalid subdirectory request.
You tried to erase a directory with the Erase
Files command.
Use the Delete Directory command instead.

* For MYDOS, error 180 can only occur when XIO 39 is
invoked to load a file.

Other DOS's - ???

Anyone?

Uncle Fester

>for the Atari 8bits. (Someone please prove me wrong!) Is there some remote
>chance a prototype exists?

There's a 5200 version, so I can't see why there isn't an 8-bit version.
I guess you could always do a "Glenn the 5200 Man" conversion on it.

> Frogger II: Threedeep

>Who released this cart, Parker Bros. or Sega?

Parker Brothers had the Frogger II license for everything, it seems.

Anyhow, here's MY cart list, for your reference:

(...and can anyone tell me how to play Ducks Ahoy? I can load my boat
with ducks, but I can't figure out where to get rid of them!)

(No, I don't know whether everything on this list was made into a real
cartridge or not!)

1361. People, there's already an Atari binaries group!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-13 00:00:00 UTC
From: jvogel@crl.com
Message-ID: <4i8ctf$pn4@crl.crl.com>
Source record: 85386

Wondering if anybody noticed.
It's comp.binaries.atari, and there's no one using it.
It's definitely here on CRL's server, so quite possibly it's on other servers.
Let's start using it :)

Oscar, The City of Grey BBS was located in Sacramento, California. However,
the BBS went down when I moved last August.

However, SELECT BBS in Sacramento is still running on an Atari 8-bit and
is connected to the Carina Network. (916) 392-7279

```
#==========Bruce Willard, 3/11/96==========
#
#I just found a Koala Pad, and went to try it out. The left and
#right buttons
#worked, but not the pad. I started to open it to take a look and
#found out
#it's a C-64 version. Does anyone know if it can work with an
#Atari, possibly
#rewiring, or is there something machine specific in it?

I'm a little confused here. I have a Koala Pad that I haven't
had out in years but I thought it plugged into the SIO port.
Does it plug into the joystick port? If so, it should be
rewirable if it isn't correct. You do need software that
supports it. There was two flavors of drawing programs.
I have the cartridge based version but there was also
a disk based version that magazine reviews tended
to like better. I think Rembrant also supported the
Koala Pad, but I can't remember any others off hand.

Hi John. What really caught my attention is the "SIMPQWK80" at the end of your message. I am not familiar with that program. Is this something from the land down-under? Please tell us about it.

The way a lot of Atari users feel is that Atari software is
"I don't care-ware" - that is, if it is not possible to buy
a copy, it doesn't matter how you get it.

I think some sort of alternative distribution is a good idea.
It is unlikely that Atari software is going to find its way
back into stores..

Perhaps some of the authors might allow the software
to be released shareware and placed on the Internet
at an FTP site? Most people probably would not
register it, but if it isn't available for sale, that
comes out to $0.00 (I had a math minor) and anything
more would be that that, wouldn't it?

I like your CD-ROM idea, though. I just dug the old
Atari 800XL out of the closet... haven't booked up the
floppy drive though...

1367. So What's Happened?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-13 00:00:00 UTC
From: thester@nyx.cs.du.edu
Message-ID: <4i7p40$1pu@nyx.cs.du.edu>
Source record: 85392

All the talk of alt.binaries.comp.atari8bit and the
other alt.binaries.warez.atari8bit seems to have
disappeared. Did I miss a thread that said we're
just going to forget it?

And is anyone setting up a site for Classic Atari Software?
(meaning - old, unavailable anywhere for sale, copyrighted stuff)

If not, then I think we should go ahead with the newsgroup
alternative. Yeah, I know some tight-asses are going to
object again, but they haven't offered anything towards a
solution yet so hopefully they'll just shut the **** up.

The thread titled "The Undieing Copyright Issue" was
ironic. We're talking of a dieing (dead) platform here.
Adhering to copyright law at this stage is a little
like suffering from anal retention. What's the point?
It all has to come out eventually.

Let's loosen up somewhat and face reality.
(yeah, copyright law is reality and so is the speed limit)
The AMC channel on television solicits for film preservation,
so what is being solicited here is preservation of _software_
works of art. In spite of copyright law, I don't think
anyone seriously believes that currently unobtainable
software should be relegated to a black hole, and that's
what is happening if we don't do something about it.
Is there a section in the Library of Congress that is
preserving Atari 8bit software. No? Then who is?
Yeah, we can all learn 6502 Assembler and write our
own stuff to sell or share, but that's like saying
to AMC that they should just forget old films and let
new filmmakers tell those stories anew with better
technology and so-forth. Eventually all this hardware
I have is going to fall into disrepair because there will
be nothing left to repair it with. Maybe the emulators
will keep the memories of Atari 8bits, but without the
old software to run on them as well, interest in them
will disappear also.

Some may wish for this thread to go away, but it's not.
Maybe back when Trip Hawkins (EA) and other software
producers blamed their dropping Atari because of piracy
that wish would be valid. Then - the Atari was still
a viable platform (barely) and piracy hurt us. But
now we're saying that we are going to be hurting the

copyright owners of "dead" software? Give me a break!

If alt.binaries.warez.atari8bit or alt.binaries.comp.atari8bit
shows up on my server, then I'm going to start posting some
of that glorius old stuff. Right now, it tells me those
two groups don't exist.

Heck, maybe I'll start posting it right here in _this_
newsgroup.

C'mon people - we need to stop treading in stagnant
waters.

Uncle Fester

1368. Wanted info on Software Sprites

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-13 00:00:00 UTC
From: Phanton <nirdary@pacificnet.net>
Message-ID: <314773BF.3C20@pacificnet.net>
Source record: 85393

Does any one knows how software sprites works,
software sprites allows you to have more then 4 Players at the same time,
i can break a Player using a DLI Rutine so the top part of the screen cam have 4
players and the bottom part have 4 playes (can be five if you include all
missiles), the horizontal position of the 8 playes can be controlled by itself.
I also have a rutine (wich was done by me and my friend long time ago) wich can
scroll a text thro a playes and the playes will wave in a sinus format.
but how to make more then four Players wich can be controlled horizontal and
vertical by them self.

Does anyone knows????

The one I have does plug into the second joystick port. I have a program that
is supposed to work with both a joystick and koala. The instructions say to
plug the joystick in port 1 and koala in port 2.

The only way I see of doing this is to show one set of four players for one
screen draw period, and then switch to a different set during the
next screen draw period. You can easily set up a VBI routine to switch
between your two sets. The problem you're going to run into is flicker.
If you pick your colours right it shouldn't be too bad. Your best
bet would be to do this only when more than 4 sprites overlap in a horizontal
band, otherwise use the technique for splitting player missile bands with
a DLI routine.

>I've had many of my old disks for 11 years now and I'm wondering if
>there is a time soon where I can expect them to suddenly lose
>their data and become useless.
>

Some of my disks are beginning to fail. They're about 12 years old.
Unfortunately, it's not the information that's fading, it's the adhesive
that holds the oxide particles to the plastic disk. The head literally
scrapes the particles right off the disk. Most of the stuff I couldn't
care less about, but some of the files were irreplacable. I can't say
for certain which brand-names are failing, but I only used to use
Nashua or Wabash disks.

On another note, what's the life-time of eproms? Some of the cartridges
and device roms are eproms. I've taken them all out and dumped the
contents out to files, but how long will these things last?

10 Big Myths about copyright explained
By Brad Templeton

1) If it doesn't have a copyright notice, it's not
copyrighted.

This was true in the past, but today almost all major
nations follow the Berne copyright convention. For example,
after April 1, 1989, almost everything created privately in the
USA is copyrighted and protected whether it has a notice or not.
The default you must assume for other people's works is that
they are copyrighted and may not be copied unless you *know*
otherwise. There are some old works that lost protection
without notice, but frankly you should not risk it unless
you know for sure.

It is true that a notice strengthens the protection, by
warning people, and by allowing one to get more and
different damages, but it is not necessary. If it looks

copyrighted, you must assume it is. This applies to pictures,
too. You can't scan pictures from magazines and post them
to the net, and if you come upon something unknown,
you shouldn't post that either.

The correct form for a notice is:
"Copyright <dates> by <author/owner>"
You can use C in a circle instead of "Copyright" but "(C)"
has never been given legal force. The phrase "All Rights
Reserved" used to be required in some nations but is now
not needed.

2) If I don't charge for it, it's not a violation.

False. Whether you charge can affect the damages awarded in
court, but that's essentially the only difference. It's still a
violation if you give it away -- and there can still be
heavy damages if you hurt the commercial value of the
property.

3) If it's posted to Usenete it's in the public domain.

False. Nothing is in the public domain anymore unless the
owner explicitly puts it in the public domain(*). Explicitly,
as in you have a note from the author/owner saying, "I grant
this to the public domain." Those exact words or words very
much like them.

Some argue that posting to Usenete implicitly grants
permission to everybody to copy the posting within fairly
wide bounds, and others feel that Usenete is an automatic store and
forward network where all the thousands of copies made are
done at the command (rather than the consent) of the
poster. This is a matter of some debate, but even if the
former is true (and in this writer's opinion we should all pray
it isn't true) it simply would suggest posters are implicitly
granting permissions "for the sort of copying one might expect
when one posts to Usenete" and in no case is this a placement
of material into the public domain. Furthermore it is very
difficult for an implicit licence to supersede an explicitly
stated licence that the copier was aware of.

Note that all this assumes the poster had the right to post
the item in the first place. If the poster didn't, then all
the copies are pirate, and no implied licence or theoretical
reduction of the copyright can take place.

(*) It's also usually in the public domain if the creator has
been dead for 50 years. If anybody dead for 50 years is posting
to the net, let me know. There are some other fine points
to this issue -- check more detailed documents for info.

4) My posting was just fair use!

See other notes on fair use for a detailed answer, but bear the following in mind:

The "fair use" exemption to copyright law was created to allow things such as commentary, parody, news reporting, research and education about copyrighted works without the permission of the author. Intent, and damage to the commercial value of the work are important considerations. Are you reproducing an article from the New York Times because you needed to in order to criticise the quality of the New York Times, or because you couldn't find time to write your own story, or didn't want your readers to have to pay to log onto the online services with the story or buy a copy of the paper? The former is probably fair use, the latter probably isn't.

Fair use is almost always a short excerpt and almost always attributed. (One should not use more of the work than is necessary to make the commentary.) It should not harm the commercial value of the work (which is another reason why reproduction of the entire work is generally forbidden.)

Note that most inclusion of text in Usenete followups is for commentary and reply, and it doesn't damage the commercial value of the original posting (if it has any) and as such it is fair use. Fair use isn't an exact doctrine, either. The court decides if the right to comment overrides the copyright on an indidvidual basis in each case. There have been cases that go beyond the bounds of what I say above, but in general they don't apply to the typical net misclaim of fair use. It's a risky defence to attempt.

5) If you don't defend your copyright you lose it.

False. Copyright is effectively never lost these days, unless explicitly given away. You may be thinking of trade marks, which can be weakened or lost if not defended.

6) Somebody has that name copyrighted!

You can't copyright a name, or anything short like that. Titles usually don't qualify, but I doubt you could write a song entitled "Everybody's got something to hide except for me and my monkey."

However, you can trademark an adjective, when applied to a generic type of product or service. Like an "Apple" computer. Apple Computer "owns" that word applied to computers, even though it is also an ordinary word. Apple Records owns it when applied to music. Neither owns the word on its own, only in context, and owning a mark doesn't mean complete control -- see a more detailed treatise on this law for details.

You can't use somebody else's trademark in a way that would unfairly hurt the value of the mark, or in a way that might make people confuse you with the real owner of the mark, or which might allow you to profit from the mark's good name. For example, if I were giving advice on music videos, I would be very wary of trying to label my works with a name like "mtv." :-)

7) They can't get me, defendants in court have powerful rights!

Copyright law is mostly civil law. If you violate copyright you would usually get sued, not charged with a crime. "Innocent until proven guilty" is a principle of criminal law, as is "proof beyond a reasonable doubt." Sorry, but in copyright suits, these don't apply the same way or at all. It's mostly which side and set of evidence the judge or jury accepts or believes more, though the rules vary based on the type of infringement. In civil cases you can even be made to self-incriminate.

8) Oh, so copyright violation isn't a crime or anything?

Actually, recently in the USA commercial copyright violation involving more than 10 copies and value over $2500 was made a felony. So watch out. (At least you get the protections of criminal law.) On the other hand, don't think you're going to get people thrown in jail for posting your E-mail. The courts have much better things to do than that. This is a fairly new, untested statute.

9) It doesn't hurt anybody -- in fact it's free advertising.

It's up to the owner to decide if they want the free ads or not. If they want them, they will be sure to contact you. Don't rationalize whether it hurts the owner or not, *ask* them. Usually that's not too hard to do. Time past, ClariNet published the very funny Dave Barry column to a large and appreciative Usenete audience for a fee, but some person didn't ask, and forwarded it to a mailing list, got caught, and the newspaper chain that employs Dave Barry pulled the column from the net, pissing off everybody who enjoyed it. Even if you can't think of how the author or owner gets hurt, think about the fact that piracy on the net hurts everybody who wants a chance to use this wonderful new technology to do more than read other people's flamewars.

10) They e-mailed me a copy, so I can post it.

To have a copy is not to have the copyright. All the E-mail you write is copyrighted. However, E-mail is not, unless previously agreed, secret. So you can certainly *report* on what E-mail you are sent, and reveal what it says. You can even quote parts of it to demonstrate. Frankly, somebody who sues over an ordinary message might well get no damages,

because the message has no commercial value, but if you want to stay strictly in the law, you should ask first. On the other hand, don't go nuts if somebody posts your E-mail. If it was an ordinary non-secret personal letter of minimal commercial value with no copyright notice (like 99.9% of all E-mail), you probably won't get any damages if you sue them.

---------- In Summary ----------

These days, almost all things are copyrighted the moment they are written, and no copyright notice is required.

Copyright is still violated whether you charged money or not, only damages are affected by that.

Postings to the net are not granted to the public domain, and don't grant you any permission to do further copying except *perhaps* the sort of copying the poster might have expected in the ordinary flow of the net.

Fair use is a complex doctrine meant to allow certain valuable social purposes. As yourself why you are republishing what you are posting and why you couldn't have just rewritten it in your own words.

Copyright is not lost because you don't defend it; that's a concept from trademark law. The ownership of names is also from trademark law, so don't say somebody has a name copyrighted.

Copyright law is mostly civil law where the special rights of criminal defendants you hear so much about don't apply. Watch out, however, as new laws are moving copyright violation into the criminal realm.

Don't rationalize that you are helping the copyright holder; often it's not that hard to ask permission.

Posting E-mail is technically a violation, but revealing facts from E-mail isn't, and for almost all typical E-mail, nobody could wring any damages from you for posting it.

Permission is granted to freely copy this
document in electronic form, or to print for
personal use. If you had not seen a notice
like this on the document, you would have to
assume you did not have permission to copy it.
This document is still protected by you-know-
what even though it has no copyright notice.

It should be noted that the author, as publisher of an electronic newspaper on the net, makes his living by

publishing copyrighted material in electronic form and has
the associated biases. However, DO NOT E-MAIL HIM FOR LEGAL
ADVICE; for that use other resources or consult a lawyer.
Also note that while most of these principles are universal
in Berne copyright signatory nations, some are derived from
Canadian and U.S. law. This document is provided to clear
up some common misconceptions about intellectual properly
law that are often seen on the net. It is not intended to
be a complete treatise on all the nuances of the subject. A
more detailed copyright FAQ, covering other issues including
compilation copyright and more intricacies of fair use is
available in the same places you found this note, or for FTP
on rtfm.mit.edu in pub/usenet-by-group/comp.answers/law/Copyright-FAQ.
Also consider gopher://marvel.loc.gov/11/copyright for
actual statutes.

Well, this UAE isn't that old yet, and it seems it will definitely move on. There's
quite a lot of developement in progress. I think it's better to start developing
an emulator on Unix than on any other platform. Doing this you're forced to design
your code as portable as possible. I doubt one could as easily port the PC XFormer
to other machines as the atari800 emulator by David Firth.

best wishes,

-Marek

>2) UAE/Amiga emulation by UAE is worse that XFormer/XL emulation.
> (obviously, being 16bit, custom silicon, etc, etc...)

Sure it's worse, they just started. XFormer is _much_ older. Darek has spent near
half of his lifetime on his project (well, maybe not that long), while UAE is still
in the alpha/beta state.

> The UAE is still not fully running under DOS, and the author states that it runs
> five times slower than a stock a-500, making it pretty useless for games, demos, etc.

... unless you force it with brute force to be usefull by running it on a 166 MHz
PentiumPro
Which indeed makes it useless for 99.9% of all of us.

> My point was that Amiga emulation on the PC (at present) would be impossible/not
> worth the effort, and UAE seems to justify that claim. Don't expect to play
> Battle Squadron on your PC anytime soon....

You're right. But let those UAE guys some time. They will improve, I'm quite confident
on this.

> Lets walk before we run, eh? I'll not expect a 100% Amiga emulator before a 100%
> XL emulator. C'mon Darek, don't prove me wrong again ;-)

:-)

James,

I just read your posting concerning PRO!.

I have been running my BBS since 1988, not quite as long as you, but still hanging in there for a while longer.

It was interesting that you are promoting Carina. Didn't Mr. "relice" program the later versions of Carina in addition to PRO!? I thought I had read that somewhere.

By the way, I am still running on version 3.1c of PRO. Mainly for some of the same reasons that you quoted.

I'm Atari-ignorant, so please excuse any howlers I may make here.

My professor needs to have some files converted to a Mac or PC readable format. Unfortunately for us, they are currently on 5-1/4" disks apparently formatted with Atari DOS 2.5, and were written with a word processor called Xlent.

A book is being help up from publication because we can't find a machine that can read these files, so I'm turning to the Net to ask for help. If you think you can read some old Atari files written in Xlent and put them on a disk that we can read on a Mac or PC, then please let me know.

Please answer to benjamin.diebold@yale.edu, as I don't check the board much, or use this account much (though I'll try to in the next few days).

Sorry for the ad here, but I didn't know where else to post.

Ben

P.S. I'm authorized to offer a small token of our gratitude in exchange, like $50 for conversion of the files on 4 disks (both sides).

Micro Maestro was one of the carts made by Chalkboard for their PowerPad drawing tablet. Other titles were Leo's Links and Leo's Lectric Paintbrush. The PowerPad plugged into a joystick port but was not compatible with software for KoalaPad or Atari Graphic Tablet.

Hi Tony.

Rather than an image of a Rev.C ROM, you might try getting a
debugged image of a Rev.A or B ROM. ANALOG printed a program once
to make one, and I probably have the resulting file on a an Atari disk
somewhere....

I've got access to two news servers, and neither carry either! The
school server refuses to carry any group containing "bin" in the
name and netcom has a very poor selection of binary groups. Poor,
as in about 5.

And I read this group every day. I can sift through a binary or two
if it appears. But rather than even bothering with a binaries newsgroup
I'd like to see a comprehensive ftp site set up. The 8bit archive
is almost impossible to get into, and the users of this group are
insanely moralistic about copyright infringement. I guess it's just
guilty feelings over destroying Atari (granted, management helped us...)

(This THING by Maffia. From newuser FAQ.)
Maffia didn't say what he was talking about. I read that FAQ 'myths'
thing before. What I wanna know is, I guess MAFFIA is in the internet
heirarchy somewhere, does this mean alt.binaries.comp.atari8bit is
gone? I don't know how to put a group up, I certainly don't know how
to take one down. I guess Maffia took that one down?
The only atari binaries I saw in my old list of usenet groups was
comp.binaries.atari.st. I didn't see any alt.binaries.atari.
So, have we been busted?

{grin} Not easy - if you have a full load of fuel and try to keep your ship out of the ground then you might survive long enough for the alien to die (or do your rescued pilots kill it?!) The usual way is to wait for the mothership, and hit 'B' for the boosters - the alien will be killed very quickly. I used to fly my ship until she went dry before switching on my boosters - I liked the way she'd coast towards the ground as the engines died.

Note, personal opinion forth-coming

Well, after running my BBS for 10 years off-and-on, I've decided to shut it down, in its current form, forever.

I urge everyone who's considering an 8bit Atari based BBS to NOT choose Pro! While it might be good software (thanks ONLY to Keith Ledbetter), the ownership and support is considerably lacking and overwhelmingly hostile.

Not once have I ever encountered an organization that was more interested in abusing its customers, rather than supporting them.

Over the last 5 years, Pro went from around 400 BBS's to around 50 current day - primarily because those other sysops (much like myself) just wouldnt take the abuse any longer.

If you wish to have a BBS running on your Atari, seriously consider contacting David Hunt about Carina, or Bob Puff on his own home-made BBS solution.

OS/A65

This is the announcement of "OS/A65", a 6502 CPU operating system
I wrote some time ago and which I now put on the Web. It is
copyrighted under the GNU public license.

Some of its features are:

- preemptive multitasking

- (kind of) microkernel design

- filesystems for PC FAT disks and CBM floppy drives on a IEEE488 interface

- runs on 6502 computer with and without MMU

- developed on a selfdesigned and -built 6502 computer

If someone is really interested in, I can also write an article for
a publication or so about it. But, well, 8 bit times are gone...

I'm coming from the Commordore world, not from atari (8bit) nor apple side.
The hardware is close to CBM3032 compatible, but the kernel itself is
completely hardware independent. So just the device drivers have to
be rewritten for porting it to another platform.

It is a good machine/OS to do some small control tasks,
where you can watch them from another shell...
My computer controls my audio equipment via infrared signals ;-)

Well, if you are interested in, here is it's homepage:

http://www.tu-chemnitz.de/~fachat/csa/

so long

: (C) Custom format tracks. THESE WERE (are) a bitch to copy!! Not
: copyable by the archiver 1.2 but supposedly by the 2.0 (did gustafson
: ever release it?)

Don't know who this "gustafson" character is supposed to be, although somewhere in the dark recesses of my mind a voice says, "Mike Gustafson was the original operator of Computer Software Services (CSS), before Bob Puff bought him out..." Is that correct?

Anyway... I don't know WHO released the Archiver 2.0, but one or the other of the above-mentioned gentlemen did, and Bob P. is still selling them AFAIK.

I have one, and it does indeed handle custom-format tracks. Pulls a bunch of other nifty tricks, too, just the kind of thing I really enjoy seeing. :-) I've never found anything the Archiver 2.0 wouldn't copy. But then, I don't do that much copying...

>The 130XE has been taken.
>

Well I have just unpacked the 130XE and powered it up. It has been about 2.5 years since I have last done so. I must say it was an emotional experience. The very familiar boot up sound almost brought tears to my eyes.

I was given my first Atari computer in 1981/1982, a 600XL. At the time it was the only thing that remotely captured my interest. I think my parents saw it as somewhat of a last hope for me to get interested in something. School (junior high) was the last thing on my mind, and they figured well it is a computer and it is educational. Well to their surprise I instantly took off. I ditched my 410 tape recorder for a 1050 disk drive, and I was dreaming of getting a 1450XLD. Well the 1450 never made it to the stores, and I held out and got a 128K 130XE. I have written quite a bit of software for it. My favorite a the burglar alarm that I converted a joystick into. It is a very nice machine. I will miss those days dearly.

Now I am doing all of my programming using C++ on a PowerMac. It is not nearly as exciting as programming a 16K 600XL, but it will have to do.

I would like to say to all the Atari users out there keep it up!!

The recipient of my computer is Glenn of NYC. He will be receiving a 130XE, 1050 DD, XM301 modem, 1 joystick, and a few manuals.
The 1050 does not work, but I think it is simply the power supply.

Hello, I recently downloaded the atari 8bit emulator demo for msdos. I'm amazed at the speed my PC can play the ROBOTCES demo, but I've been searching in vain for good "classic" atari 8 bit stuff... like Hollywood Medieval, Quasimodo's revenge, K-razy shootout, Star Raider, and maybe Shamus.

I miss these games (which are lost on "bad sectored" floppies) is there a CDROM someplace? how about an ftp... I can't seem to subscribe to alt.bin...comp...atari8. any help is appreciated.

Message-ID: <4i89us$8aa$1@mhafn.production.compuserve.com>
Source record: 85402

Dug out the 8-bit last week and had a great time. Unfortunately, I did a much better job of saving diskettes than saving docs. Does anyone have a copy of the M.U.L.E. documentation? I can fake my way through most of it, but would really appreciate the whole story.

Grateful for any e-mails hitting the highlights/essentials.

Thanks in advance,
S

They're not gone in The Computer Journal. The TCJ #78 (March/April) will
have an article on a 6502 board designed by one of our readers.

```
Welcome to the Atari 400/800/XL/XE software sale catalog.

This list is also available at:

http://www.interlog.com/~richs/atari.html

The range of titles is constantly changing, with new titles being
added weekly.
Most stock is limited so we are having to operate on a first come
first served basis.

The list below details our current inventory.

Last updated: March 13th, 1996.

8-Bit Software

Title Format Stock Status Price

---------------------------------------------------------------------
Asteroids cartridge in stock $10
Atari Logo cartridge in stock $10
Atari Music I disk (24K) in stock $10
Atari Music II disk (24K) in stock $10
Atlantis (Imagic) cartridge in stock $10
Ballblazer cartridge in stock $10
Blue Max cartridge in stock $10
Centipede cartridge in stock $10
Choplifter cartridge in stock $10
Conversational French tape (16K) in stock $10
Conversational Italian tape (16K) in stock $10
Crime Buster cartridge in stock $10
Crossbow cartridge in stock $10
Crossfire (Sierravision) cartridge in stock $10
Crystal Castles cartridge in stock $10
David's Midnight Magic cartridge in stock $10
Defender cartridge in stock $10
Demon Attack (Imagic) cartridge in stock $10
Desert Falcon cartridge in stock $10
Eastern Front cartridge in stock $10
Final Legacy cartridge in stock $10
Food Fight cartridge in stock $10
Football cartridge in stock $10
Galaxian cartridge in stock $10
Home Filing Manager disk in stock $10
Into the Eagles Nest cartridge in stock $10
Invitation to Programming 1 tape (8K) in stock $10
```

Invitation to Programming 2 tape (8K) in stock $10
Joust cartridge in stock $10
Jet Boot Jack disk (48K) in stock $10
Juggles House disk (16K) in stock $10
Millipede cartridge in stock $10
Missile Command cartridge in stock $10
Moon Patrol cartridge in stock $10
My First Alphabet disk (32K) in stock $10
Necromancer cartridge in stock $10
One on One cartridge in stock $10
Pacman cartridge in stock $10
Paint cartridge in stock $10
Pole Position cartridge in stock $10
Qix cartridge in stock $10
Rescue on Fractalus cartridge in stock $10
Robotron 2084 cartridge in stock $10
Space Invaders cartridge in stock $10
Summer Games cartridge in stock $10
Thunderfox cartridge in stock $10
Touch Typing tape (16K) in stock $10
World Geography disk (48K) in stock $10

Unless otherwise stated, all of the above titles are brand new, unused, in their original packaging and complete with manuals etc.

Please note that quantities are limited, and prices are subject to change without notice.

Hardware

Item Condition Stock Status Price

Paddle Controllers brand new in stock $25.00
Trackball brand new in stock $25.00
Atari Lab Light Module brand new in stock $25.00
(requires starter kit)

Books

Book Description Condition Stock Status Price

Atari Basic brand new in stock $3.00
- Learning by Using
Inside Atari Basic brand new in stock $3.00
- Bill Carris

Magazines

We also have a small selection of the following Atari specific magazines:

- Antic
- Analog

- Compute!

Please email us for more details.

Payment

Payment can only be made in the following three ways:

(1) Money Order
(2) By cheque drawn against a Canadian Bank
(3) Cash

Cheques and Money Orders are to be made payable to Richard Smith.

Shipping and Handling

Inside Canada:
$5.00 per order.

To the U.S.:
$6.00 per order.

Outside North America:
We will ship anywhere. Drop us a line and enquire !

Ordering Information

(1) Please email the list of items you require to the address
at the bottom of this page.

(2) You will then receive an email message in return confirming
stock levels, and the total cost of your order.

(3) Should you decide to go ahead with your order, email us and
the items will then be reserved for you.

(4) Then please send us your money order/cash/cheque for the items.
As soon as payment is received, your items will be shipped to
you the following business day, except for cheques which will
be held for 3 days to allow for clearance.

If payment is not received within 15 days, the items will be
taken off reserve.

Mailing List
If you wish to be added to the stock mailing list, please send me
your email address. Updates will be sent out every 3 weeks.

The email address for orders/enquiries is:
richs@interlog.com

My mailing address is:

1407. Lifetime of Floppies?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-14 00:00:00 UTC
From: khaley@nova.gmi.edu
Message-ID: <khaley.826813715@gmi.edu>
Source record: 85405

What's the average lifetime on the SS/DD 5.25" floppies?

I have dozens (hundreds?) of floppies for my XE and I've started
backing up some of my more important software on new floppies.
I've had many of my old disks for 11 years now and I'm wondering if
there is a time soon where I can expect them to suddenly lose
their data and become useless.

/Kevin

Just what is your MMU for a 6502? I've never heard of one that's
completely compatable (designed for 65... series processors). Possibly
with a lot of interface chips and major software design a 68000 series
MMU could be made to work. As far as I know, Commodore never had an MMU
in any of their 6502 systems. If you're thinking of what they did to
make the C128, that isn't memory management, but just a latch toggle
system to switch in multiple banks of RAM.

8 bit times for personnal computers may be going (lots of Apple][s still
doing a great job out there), but there still is a vast (and growing) market
for 8 bit micro controllers, and the 6502 is still used in a lot of them.
8 bitters can easily handle deluxe microwave ovens, VCR's, etc. Places
where using 16 bits is just a waste of silicon. Some of these functions
can be done by 4 bitters if anyone made them. And some are being done
with single bit units (8 internal, but single bit serial interfaces to
RAM, ROM, etc.).

>I'm coming from the Commordore world, not from atari (8bit) nor apple side.

Now that is something I consider a very interesting project, but only if
the computer can be used for lots of other things at the same time it is
doing it's control thing. Otherwise, it's no better than a remote.

Yeah, Mike Gufaston, original marketer of the Archiver. I find it
interesting that the 2.0 is still being sold??? Where???

Personally, I always found it much easier to REMOVE the copy
protection cause' sector copies are so much faster.....

The other thing that was nice about the archiver, you can actually
create a track with 23 sectors in it, that the archiver COULD NOT
copy, but if done right, you could use it for an UNCOPYABLE BY
ANYTHING, even Happy, but was consistent for use in copy protection.
```

1410. Uploaded: Atari800-0.3.3.tar.gz

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-15 00:00:00 UTC
From: David Firth <david@signus.demon.co.uk>
Message-ID: <1996Mar15.214832.489@signus.demon.co.uk>

```
Atari 800 Emulator for Unix, Version 0.3.3
------------------------------------------

The latest version of this emulator can be downloaded from:-

ftp://ftp.demon.co.uk/pub/emulators/atari/Atari800-0.3.3.tar.gz

An Amiga A1200 binary (still slow) can be downloaded from:-

ftp://ftp.demon.co.uk/pub/emulators/atari/Atari800-0.3.3-amiga-bin.lzh

Features
--------

+ 48K/52K Atari 400/800 emulation (optional RAM between 0xc000 and 0xcfff)
+ Atari 800XL emulation.
+ Atari 130XE emulation (but Antic access the same bank the CPU is using)
+ OSS Super Cartridges.
+ Wide / Normal / Standard Playfields.
+ Joystick controller using numeric keypad.
+ Paddle controller using X Window mouse position.
+ Display List and Vertical Blank Interrupts.
+ All Antic Display modes.
+ GTIA graphics support for *all* Antic modes (GTIA Characters etc.)
+ Player Missile Graphics with collision detection.
+ H: devices replaces C: devices giving local filesystem access.
+ Reads both ATR and XFD disk files.
+ XVIEW and Amiga User Interfaces
+ PILL mode - allows memory between 0x8000 and 0xbfff to be toggled
between RAM and ROM.
+ Horizontal and Vertical Fine Scrolling
+ Playfield and Player/Missile Priorities
+ Sound Support on Unix using the Network Audio System
+ Printer support

Changes in 0.3.3
----------------

- New System menu in XVIEW version allowing selection of operating
system etc.
- Amiga: Iconify working.
- Amiga: System menu contains options for Insert ROM, Remove ROM,
Enable PILL, Selection of Operating System and all previous disk
options.
- Amiga: Help menu option is now working using Multiview.
```

Changes in 0.3.2

- Modified BRK instruction to take account of the I flag. The BRK
instruction is ignored if the I flag is set.
- Added all unofficial NOP opcodes.
- New cartridge handling. The XVIEW version provides menu items
enabling the insertion and removal of cartridges.

Changes in 0.3.1

- Defined PRINT_COMMAND in devices.c for Amiga
- Minor optimisation to PMG handling
- Modified DLI Handling and ScanLine processing

I recieve no monies at all from previous Advenute efforts. Personally I
would love to see the Atari 8 bit stuff up on a web site. But I'm not sure
"who" owns the previous copyrights these days. (probably no one!) Anyway
I'm working on WIn95 version of games...

1412. ATR to DCM?

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-15 00:00:00 UTC
From: mcmahon@inil.com
Message-ID: <3f7cc$1027c.194@news.inil.com>
Source record: 85286

Hello!

Surely there must be a way to convert ATR images to DCM files? Is there a program available to do this? The reason I'm asking, is that I just bought a CD ROM recorder and want to make a CD with 8 bit software, and can make all the ATR's I want, but is not compatible for an 8 bitter to use a ATR file, when DCM is the preferred format. What I would like to do is to get information on both formats and create a program (either Atari/IBM executable or basic) to convert these. This way i can put either format on the CD that would satisfy IBM'ers and 8 bitters.

Maybe this could be a group effort or point me in the direction of the documents for the DCM and ATR formats and I'll get to work...

Well, if you're downloading via a Unix or VMS box or something, you can get
and use UnZIP for those.

: Anyway just thought I'd warn anyone out there that has ONLY an Atari to work
: with, that if they download files from the above site they won't be able to
: process them unless they have access to a computer that can UNzip... (Why
: the person in charge of that site didn't .ARC them is beyond me.....)

Atari's can UnZip! :) Not the most compatible (I think PK1.0 style, while the
latest is PK2.something on PC's), but it might work! :)

Ivo, you're working on this guy, right? If so, what's the status.

Most common protection scheme for earlier carts was to have the cart
program try to write to a memory location inside the cartridge; if it
was running from RAM, it would change the byte, if from ROM, nothing
would change. So disassembly of the cart program would be necessary to
modify that. Unless you can locate a product called "The Pill" which
was a blank cartridge that when the switch was flipped on it,
protected that area of RAM and made the computer think it was ROM.
Incidentially, I am looking for a PILL, does anyone have one? They
have several Good uses in cracking games.

The Monkey Wrench II cartridge was made to go into the right cart slot on an original 800. As far as I could tell with it, it was enhancements to atari basic. I had the docs to it when I was into the atari originally (around 1982-85) and I seem to remember it was pretty much useless.

A Happy enhancement is a board for the 810 and 1050 drives that
(a) copies protected software
(b) compacts protected software (puts it all on one disk, ie 3 titles on 1)
(c) and most usefully, SPEEDS UP I/O time 400%-500%!!

GET ONE for reason c!!

I'm told the Archiver is still being sold (see "Dead Sector? message) which also copies software w/o the i/o speedup. The other thing you can use to copy programs is an Omnimon. A machine language monitor that is hardware based, allowing you to interupt any program that is running. Did you ever get a game that you had on a full boot disk, and then you saw as a regular DOS file? Basically you use the omnimon to write out the contents of memory to a blank disk, then you can use Binary Save when you reboot regular dos to save the game as a regular dos file, taking up less disks and removing the copy protection at the same time! If a game has disk access, you can do the same thing.

I have a few of these items on order for myself, being as I sold them all in the 80's, and when I get them back I will probably reinstate a series I wrote then called "The Cracking Column" which explains how to remove copy protection with these and other tools.

>
EEPROMS used in pinball machines are by manufacturer spec listed for a lifetime of 10 years. The eeproms are the same as the ones in the carts, so I would say that as a good estimate. Interestingly enough, the Song minidisc media is listed as 10 years also. I thought CD's were supposed to last FOREVER!

1419. Impossible/Pill wanted

Newsgroup: comp.sys.atari.8bit

Hi all, just wondering if anyone want to sell me a device called "THE
PILL" for the Atari. I could use it for de-protection of software....
Also Does anyone have the replacement OS card "The Impossible" for the
800? Also useful for deprotecting software.
email scharles@superlink.net

1420. NEED SOFTWARE FOR 8-BIT ARCHIVE

Newsgroup: comp.sys.atari.8bit
Date: 1996-03-15 00:00:00 UTC
From: scharles@superlink.net
Message-ID: <3149a809.1864261@news.superlink.net>
Source record: 85294

Hello, everyone, I would like to collect all the old atari 8 bit
software and make it available at a nominal fee to everyone on CDR.
I would need info on (a) hard drive interface for the 8 bit
(b) the software, which by my calculations, everything worth having
would fit easily into 650 megs
(c) Would give major contributers to this effort a CD at cost.
Thanks in advance and email scharles@superlink.net with clues!

1421. People, there's already an Atari binaries group!!!

Newsgroup: comp.sys.atari.8bit

Whilst reading the usual rubbish I find here, John M. Vogel wrote something
interesting to All about People, there's already an Atari binaries group!!!:

Hello John,

JMV> Wondering if anybody noticed.
JMV> It's comp.binaries.atari, and there's no one using it. It's definitely

True, but cb.atari8bit exists, too. Chances are the one you mention was
originally used by both 8 & 16 bitters.
